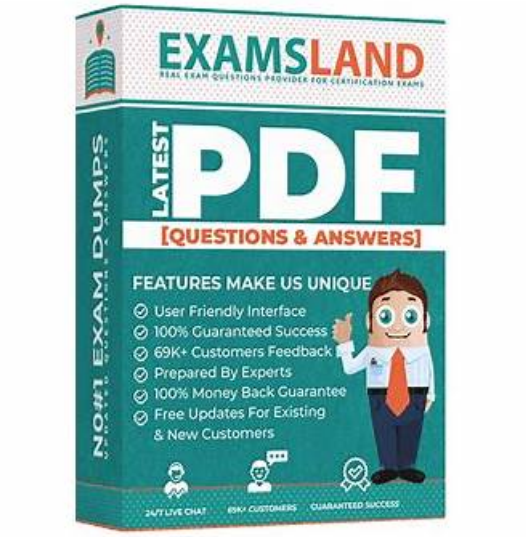
Exam PCCP Simulator Fee - PCCP Free Dumps



What's more, part of that TestSimulate PCCP dumps now are free: https://drive.google.com/open?id=1sJucUmkWIx89P7muE_skYfity-vflQoP

The Palo Alto Networks PCCP dumps are given regular update checks in case of any update. We make sure that candidates are not preparing for the Palo Alto Networks PCCP exam from outdated and unreliable PCCP study material. TestSimulate offers you a free demo version of the Palo Alto Networks PCCP Dumps. This way candidates can easily check the validity and reliability of the PCCP exam products without having to spend time.

Your dream is very high, so you have to find a lot of material to help you prepare for the exam. TestSimulate Palo Alto Networks PCCP Exam Materials can help you to achieve your ideal. TestSimulate Palo Alto Networks PCCP exam materials is a collection of experience and innovation from highly certified IT professionals in the field. Our products will let you try all the problems that may arise in a really examinations. We can give you a guarantee, to ensure that candidates get a 100% correct answer.

PCCP Free Dumps, PCCP Exams Torrent

In order to serve you better, we have a complete service system for you if you purchasing PCCP learning materials. We offer you free demo to have a try before buying, so that you can have a better understanding of what you are going to buy. After your payment for PCCP exam dumps, you can receive your downloading link and password within ten minutes, if you don't receive, you can contact with us, and we will solve it for you. You can enjoy free update for 365 days after buying PCCP Exam Dumps, and the update version will be sent to your email automatically. If you have any questions about PCCP exam dumps after buying, you can contact with our after-sale service.

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details

Topic 1	• Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.
Topic 2	• Cybersecurity:This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.
Topic 3	• Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.
Topic 4	• Network Security: This domain targets a Network Security Specialist and includes knowledge of Zero Trust Network Access (ZTNA) characteristics, functions of stateless and next-generation firewalls (NGFWs), and the purpose of microsegmentation. It also covers common network security technologies such as intrusion prevention systems (IPS), URL filtering, DNS security, VPNs, and SSL • TLS decryption. Candidates must understand the limitations of signature-based protection, deployment options for NGFWs, cybersecurity concerns in operational technology (OT) and IoT, cloud-delivered security services, and AI-powered security functions like Precision AI.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q26-Q31):

NEW QUESTION # 26
Which type of system collects data and uses correlation rules to trigger alarms?

- A. SIM
- B. UEBA
- C. SOAR
- D. SIEM

Answer: D

Explanation:
A Security Information and Event Management (SIEM) system collects data from various sources (logs, events, etc.) and uses correlation rules to analyze this data and trigger alarms when suspicious or predefined patterns are detected.

NEW QUESTION # 27
Which Palo Alto Networks solution has replaced legacy IPS solutions?

- A. Advanced WildFire
- B. Advanced DNS Security
- C. Advanced URL Filtering
- D. Advanced Threat Prevention

Answer: D

Explanation:
Advanced Threat Prevention is the Palo Alto Networks solution that has replaced legacy Intrusion Prevention Systems (IPS). It offers inline, ML-powered threat detection and evasion-resistant inspection to block sophisticated threats in real time, going beyond traditional signature-based IPS.

NEW QUESTION # 28
What are two limitations of signature-based anti-malware software? (Choose two.)

- A. It requires samples lo be buffered
- B. It uses a static file for comparing potential threats.
- C. It only uses packet header information.
- D. It is unable to detect polymorphic malware.

Answer: B,D

Explanation:
Signature-based systems struggle with polymorphic or obfuscated malware, which changes its code to avoid detection. Signature-based detection relies on static databases of known threat signatures, limiting its ability to identify new or unknown threats.

NEW QUESTION # 29
What is a function of SSL/TLS decryption?

- A. It identifies loT devices on the internet.
- B. It reveals malware within web-based traffic.
- C. It applies to unknown threat detection only.
- D. It protects users from social engineering.

Answer: B

Explanation:
SSL/TLS decryption allows security tools to inspect encrypted traffic, enabling them to detect hidden malware, command-and-control communication, or data exfiltration that would otherwise bypass inspection if left encrypted.

NEW QUESTION # 30
Which component of the AAA framework verifies user identities so they may access the network?

- A. Allowance
- B. Authentication
- C. Authorization
- D. Accounting

Answer: B

Explanation:
Authentication is the component of the AAA (Authentication, Authorization, and Accounting) framework that verifies user identities (e.g., via passwords, certificates, or biometrics) before granting access to network resources.
