

Exam Questions for the HP HPE7-A01 - Improve Your Career Prospects

HP HPE7-A01 Practice Questions

Aruba Certified Campus Access Professional Exam

Order our HPE7-A01 Practice Questions Today and Get Ready to Pass with Flying Colors!

HPE7-A01 Practice Exam Features | QuestionsTube

- Latest & Updated Exam Questions
- Subscribe to FREE Updates
- Both PDF & Exam Engine
- Download Directly Without Waiting

<https://www.questionstube.com/exam/hpe7-a01/>

At QuestionsTube, you can read HPE7-A01 free demo questions in pdf file, so you can check the questions and answers before deciding to download the HP HPE7-A01 practice questions. These free demo questions are parts of the HPE7-A01 exam questions. Download and read them carefully, you will find that the HPE7-A01 test questions of QuestionsTube will be your great learning materials online. Share some HPE7-A01 exam online questions below.

1.What is true regarding 802.11k?

BTW, DOWNLOAD part of Pass4SureQuiz HPE7-A01 dumps from Cloud Storage: <https://drive.google.com/open?id=1BuE-kK6c8j690fsdEhASpPlm5S9FPuY>

With Pass4SureQuiz, you can trust that you're accessing authentic and error-free HPE7-A01 exam practice questions. These questions are available in three different formats: PDF questions files, desktop practice test software, and web-based practice test software. All three formats contain genuine HPE7-A01 Practice Questions that will effectively prepare you for the final exam.

HP HPE7-A01 certification is an essential credential for professionals working in the field of Aruba network solutions. Aruba Certified Campus Access Professional Exam certification is designed to validate the expertise of the candidates in the area of Aruba campus access solutions. Aruba Certified Campus Access Professional Exam certification exam, HPE7-A01, is intended to measure the knowledge and skills of the candidates in implementing Aruba wired and wireless campus networks.

HP HPE7-A01 certification exam is an excellent opportunity for IT professionals who want to validate their knowledge and skills in Aruba campus access solutions. Aruba Certified Campus Access Professional Exam certification exam covers a wide range of topics related to Aruba networks, and it is designed to test the candidate's ability to design, deploy, and maintain secure and reliable networks. The HPE7-A01 Exam is an online, proctored exam that can be taken at any time from any location, and it leads to the Aruba Certified Campus Access Professional (ACCP) certification.

2025 HP HPE7-A01 Latest Test Result

These HP HPE7-A01 exam practice tests identify your mistakes and generate your result report on the spot. To make your success a certainty, Pass4SureQuiz offers free updates on our HP HPE7-A01 real dumps for up to three months. It means all users get the latest and updated HP HPE7-A01 practice material to clear the Aruba Certified Campus Access Professional Exam HPE7-A01 certification test on the first try. We are a genuine brand working to smoothen up your HPE7-A01 exam preparation.

The Aruba Certified Campus Access Professional exam is designed to test a wide range of skills and knowledge related to Aruba's networking solutions. This includes in-depth knowledge of Aruba's wireless technologies, such as access points, controllers, and management software. It also covers key concepts related to wired networking, such as VLANs, routing, and switching.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q141-Q146):

NEW QUESTION # 141

Which statement best describes QoS?

- A. Determining which traffic passes specified quality metrics
- B. Scoring traffic based on the quality of the contents
- **C. Identifying specific traffic for special treatment**
- D. Identifying the quality of the connection

Answer: C

Explanation:

QoS stands for Quality of Service and is a mechanism that allows network devices to prioritize and differentiate traffic based on certain criteria, such as application type, source, destination, etc.³. QoS involves identifying specific traffic for special treatment and applying policies and actions to improve its performance or meet certain service level agreements (SLAs)³. QoS can help network devices to manage congestion, delay, jitter, packet loss, bandwidth allocation, etc., for different types of traffic³.

QoS can be implemented at various layers of the network stack and across different network domains.

References: <https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/qos/configuration/15-mt/qos-15-mt-book/qos-overview.html>

NEW QUESTION # 142

A new network design is being considered to minimize client latency in a high-density environment. The design needs to do this by eliminating contention overhead by dedicating subcarriers to clients.

Which technology is the best match for this use case?

- A. Channel Bonding
- B. QWMM
- C. MU-MIMO
- **D. OFDMA**

Answer: D

Explanation:

Explanation

OFDMA (Orthogonal Frequency Division Multiple Access) is a technology that can minimize client latency in a high-density environment by eliminating contention overhead by dedicating subcarriers to clients. OFDMA allows multiple clients to transmit simultaneously on different subcarriers within the same channel, reducing contention and increasing efficiency. MU-MIMO (Multi-User Multiple Input Multiple Output) is a technology that allows multiple clients to transmit simultaneously on different spatial streams within the same channel, but it does not eliminate contention overhead. QWMM (Quality of Service Wireless Multimedia) is a technology that prioritizes traffic based on four access categories, but it does not eliminate contention overhead. Channel Bonding is a technology that combines two adjacent channels into one wider channel, increasing bandwidth but not eliminating contention overhead. References:

NEW QUESTION # 143

Your customer has asked you to assign a switch management role for a new user. The customer requires the user role to only have Web UI access to the System > Log page and only have access to the GET method for REST API for the /logs/event resource. Which default AOS-CX user role meets these requirements?

- A. sysops
- B. operators
- **C. administrators**
- D. auditors

Answer: C

Explanation:

The auditors role is the default AOS-CX user role that meets the requirements of having Web UI access to the System > Log page and having access to the GET method for REST API for the /logs/event resource. The auditors role has a level of 1 and allows read-only access to most commands except those related to security or passwords. It also allows access to the Web UI and REST API with limited permissions. The other options are incorrect because they either have higher levels of access or do not allow access to the Web UI or REST API. Reference: <https://www.arubanetworks.com/techdocs/AOS-CX/10.04/HTML/5200-6728/bk01-ch01.html> <https://www.arubanetworks.com/techdocs/AOS-CX/10.04/HTML/5200-6728/bk01-ch04.html>

NEW QUESTION # 144

A customer is using stacked Aruba CX 6200 and CX 6300 switches for access and a VSX pair of Aruba CX 8325 as a collapsed core. 802.1X is implemented for authentication. Due to the lack of cabling, some unmanaged switches are still in use. Sometimes devices behind these switches cause network outages. The switch should send a warning to the helpdesk when the problem occurs. You have been asked to implement an effective solution to the problem. What is the solution for this?

- A. Configure spanning tree on the Aruba CX 6200 and CX 6300 switches. No trap option is needed.
- B. Configure loop protection on all edge ports of the Aruba CX 6200 and CX 6300 switches. No trap option is needed.
- C. Configure spanning tree on the Aruba CX 8325 switches. Set the trap-option.
- **D. Configure loop protection on all edge ports of the Aruba CX 6200 and CX 6300 switches. Set up the trap-option.**

Answer: D

Explanation:

This is the correct solution to the problem of devices behind unmanaged switches causing network outages due to loops. Loop protection is a feature that allows an Aruba CX switch to detect and prevent loops by sending loop protection packets on each port, LAG, or VLAN on which loop protection is enabled. If a loop protection packet is received by the same switch that sent it, it indicates a loop exists and an action is taken based on the configuration. Loop protection should be configured on all edge ports of the Aruba CX 6200 and CX 6300 switches, which are the ports that connect to end devices or unmanaged switches. The trap-option should be set up to send a warning to the helpdesk when a loop is detected. The other options are incorrect because they either do not configure loop protection or do not set up the trap-option.

NEW QUESTION # 145

Which component is used by the Aruba Network Analytics Engine (NAE)?

- A. Lisp-based agents
- B. Ruby-based scripts
- C. Current State Database
- **D. JSON-based scripts**

Answer: D

Explanation:

The component that is used by the Aruba Network Analytics Engine (NAE) is D. Current State Database.

The Current State Database is a database that stores the configuration and state information of the switch, such as interfaces, VLANs, routing protocols, statistics, and more. The NAE can access this database through the AOS-CX REST API and monitor the values of any data point using monitors. The NAE can also track the history of the values in a time-series database and correlate them with network events or configuration changes. The Current State Database provides NAE with direct visibility into the entire current state of the device, which enables intelligent troubleshooting and automation of network tasks.

The other options are incorrect because:

* A. JSON-based scripts: JSON is a data format that is used to exchange information between applications. It is not a scripting language that can be used by NAE. NAE scripts are written in Python, which is a popular and powerful programming language¹.

* B. Lisp-based agents: Lisp is a family of programming languages that are mainly used for artificial intelligence and functional programming. It is not a language that can be used by NAE. NAE agents are instances of scripts that run on the switch and collect relevant network information and trigger alerts or actions¹.

* C. Ruby-based scripts: Ruby is a general-purpose programming language that is known for its expressiveness and elegance. It is not a language that can be used by NAE. NAE scripts are written in

* Python, which is a popular and powerful programming language¹.
