# Exam Salesforce Analytics-Arch-201 Price - New Analytics-Arch-201 Braindumps Free

P.S. Free & New Analytics-Arch-201 dumps are available on Google Drive shared by PracticeMaterial:
https://drive.google.com/open?id=1xu2Gxsb5gjA2CosadnAmpkNayyHtPopr

After the client pay successfully they could receive the mails about Analytics-Arch-201 guide questions our system sends by which you can download our test bank and use our Analytics-Arch-201 study materials in 5-10 minutes. The mail provides the links and after the client click on them the client can log in and gain the Analytics-Arch-201 Study Materials to learn. The procedures are simple and save clients' time. For the client the time is limited and very important and our Analytics-Arch-201 learning guide satisfies the client's needs to download and use our Analytics-Arch-201 practice engine immediately.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.
Topic 2	• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
Topic 3	• Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

100% Pass Quiz 2025 Salesforce - Exam Analytics-Arch-201 Price

As far as we are concerned, the key to quick upward mobility lies in adapting your excellent personality to the style of the organization you are working in. Our Analytics-Arch-201 exam materials embrace much knowledge and provide relevant Analytics-Arch-201 Exam bank available for your reference, which matches your learning habits and produces a rich harvest of the Analytics-Arch-201 exam knowledge. As long as you buy our Analytics-Arch-201 study guide, you will be benefited from it!

Salesforce Certified Tableau Architect Sample Questions (Q103-Q108):

NEW QUESTION # 103
In creating an appropriate test plan for load testing a Tableau Server deployment, which aspect is crucial to include for a comprehensive evaluation?

- A. Focusing solely on the data extract refresh times to determine the overall server performance
- B. Including a mix of different user activities, such as viewing dashboards, publishing work-books, and performing data refreshes
- C. Testing exclusively with the largest and most complex dashboards to evaluate the server's maximum capacity
- D. Limiting the test to a small, controlled group of users to maintain consistency in the testing process

Answer: B

Explanation:
Including a mix of different user activities, such as viewing dashboards, publishing workbooks, and performing data refreshes For a comprehensive evaluation in a load testing plan for Tableau Server, it's essential to include a variety of user activities. This approach ensures that the testing covers a broad range of interactions, such as viewing dashboards, publishing work-books, and performing data refreshes, thereby providing a more holistic view of the server's performance under different types of load. Option A is incorrect because testing exclusively with the largest and most complex dashboards does not represent the typical range of user activities. Option C is incorrect as focusing solely on data extract refresh times overlooks other crucial aspects of server performance. Option D is incorrect because limiting the test to a small user group does not adequately simulate the diverse and concurrent usage patterns seen in a production environment.

NEW QUESTION # 104
When installing Tableau Server in an air-gapped environment, which of the following steps is essential to ensure a successful installation and operation?

- A. Using a physical medium to transfer the Tableau Server installation files to the environment
- B. Enabling direct internet access from the Tableau Server for software updates
- C. Configuring Tableau Server to use a proxy server for all external communications
- D. Implementing a virtual private network (VPN) to allow remote access to the Tableau Server

Answer: A

Explanation:
Using a physical medium to transfer the Tableau Server installation files to the environment In an air-gapped environment, where there is no direct internet connection, using a physical medium (like a USB drive or external hard disk) to transfer the Tableau Server installation files is essential. This method ensures that the necessary software can be securely introduced into the isolated environment for installation. Option A is incorrect because direct internet access is typically not possible or allowed in an air-gapped environment. Option C is incorrect as a proxy server implies some level of external network access, which is not available in an air-gapped setup. Option D is incorrect because implementing a VPN is not feasible in a truly air-gapped environment where no external network connections are allowed.

NEW QUESTION # 105
A small consulting firm is implementing Tableau Server for its team of 20 analysts. What hardware and network configuration would be most suitable for this size of deployment?

- A. Basic consumer-grade hardware and a standard residential internet connection
- B. The highest available specifications for hardware and network to future-proof the deployment
- C. Moderate-capacity server with reliable network connectivity, adequate for small team collaboration
- D. Enterprise-grade server infrastructure with a complex network setup

Answer: C

Explanation:

Moderate-capacity server with reliable network connectivity, adequate for small team collaboration For a small team of 20 analysts, a moderate-capacity server with reliable network connectivity provides a balanced and cost-effective solution, ensuring good performance without over-investing in unnecessary high-end infrastructure. Option A is incorrect because enterprise-grade infrastructure is excessive for a small team and may not be cost-effective. Option C is incorrect as the highest available specifications may be overkill for a small consulting firm and not a financially prudent choice. Option D is incorrect because consumer-grade hardware and a standard residential internet connection may not provide the reliability and performance needed for professional Tableau use.

NEW QUESTION # 106

In the context of a Tableau Server high-availability setup, what is a crucial consideration when con-figuring a coordination ensemble?

- A. Ensemble nodes should be distributed across different physical locations for geographical redundancy
- B. Coordination ensemble nodes require significantly more storage than other nodes in the cluster
- C. The ensemble should be configured on a single node to centralize coordination control
- D. It's important to configure an odd number of ensemble nodes to prevent split-brain scenarios

Answer: D

Explanation:

It's important to configure an odd number of ensemble nodes to prevent split-brain scenarios Configuring an odd number of nodes in the coordination ensemble is crucial to avoid split-brain scenarios where two halves of a cluster might operate independently due to a network partition. An odd number ensures that a clear majority can be established, which is necessary for consensus and coordination. Option A is incorrect because centralizing coordination control on a single node can be a single point of failure and is not recommended for high availability. Option B is incorrect as while geographical redundancy is good, it's not specifically related to the configuration of the coordination ensemble within a Tableau Server cluster. Option D is incorrect because co-ordination ensemble nodes do not typically require significantly more storage than other nodes; their primary role is coordination, not data storage.

NEW QUESTION # 107

In the context of Tableau Server, what is an important consideration when configuring access to the Metadata API for external applications?

- A. Configuring the Metadata API to provide real-time updates to external applications
- B. Allowing unrestricted access to the Metadata API from any external application
- C. Implementing OAuth for secure, token-based authentication for external applications accessing the Metadata API
- D. Ensuring external applications have direct database access for synchronized metadata retrieval

Answer: C

Explanation:

Implementing OAuth for secure, token-based authentication for external applications accessing the Metadata API Implementing OAuth for secure, token-based authentication is crucial when allowing external applications to access the Metadata API. This ensures that only authorized applications can access the API, enhancing security by providing controlled access based on authenticated tokens. Option A is incorrect because unrestricted access can lead to security vulnerabilities and performance issues. Option B is incorrect as real-time updates are more related to the functionality of the Metadata API rather than its configuration for external applications. Option D is incorrect because direct database access is not a standard or safe practice for external applications, especially in the context of API access.

NEW QUESTION # 108
......

Time talks. The passing rate for PracticeMaterial Analytics-Arch-201 download free dumps is really high. Our users do not worry about tests with our products. There was one big piece missing from the puzzle. As exams are very difficult and low passing rate, it will be useless if you do not purchase valid dumps. Salesforce Analytics-Arch-201 Exam Learning materials make you half the work double the things. Once you pass exam you will obtain a satisfied jobs as you desire.
