While this can be a convenient way to take a Salesforce Certified Tableau Data Analyst (Analytics-DA-201) exam dumps, it can also be stressful. Luckily, PassLeader's best Salesforce Certified Tableau Data Analyst (Analytics-DA-201) exam questions can help you prepare for your Salesforce Certified Tableau Data Analyst (Analytics-DA-201) certification exam and reduce your stress. If you are preparing for the Salesforce Certified Tableau Data Analyst (Analytics-DA-201) exam dumps our Analytics-DA-201 Questions help you to get high scores in your Analytics-DA-201 exam.

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• ABAP SQL and Code Pushdown: This section of the exam measures the competencies of the SAP ABAP Cloud Developer related to performance optimization through ABAP SQL and code pushdown techniques. It ensures that the developer understands how to shift logic to the database layer using efficient SQL scripting to enhance performance in data-intensive applications.

Topic 2	<ul style="list-style-type: none"> • Object-Oriented Design: This section of the exam evaluates the SAP ABAP Cloud Developer's understanding of object-oriented principles in the ABAP context. It focuses on class-based programming, inheritance, interfaces, and polymorphism, all crucial for building modular and maintainable ABAP cloud applications.
Topic 3	<ul style="list-style-type: none"> • Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S • 4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.
Topic 4	<ul style="list-style-type: none"> • ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP S • 4HANA Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP.

Analytics-DA-201 Exam Success - Analytics-DA-201 PDF VCE

Being different from the other Analytics-DA-201 Exam Questions in the market, our Analytics-DA-201 practice materials have reasonable ruling price and satisfactory results of passing rate up to 98 to 100 percent. So our Analytics-DA-201 guide prep is perfect paragon in this industry full of elucidating content for exam candidates of various degrees to use for reference. It contains not only the newest questions appeared in real exams in these years, but the most classic knowledge to master.

Salesforce Certified Tableau Data Analyst Sample Questions (Q164-Q169):

NEW QUESTION # 164

A Data Analyst wants to create the following table in a view:

Employee	Position	Salary
Corporate		700,540
Global Office		420,000
Consultant		1,500,000

Which function should the analyst use to create the Position column?

- A. LAST
- B. INDEX
- C. RANK
- **D. FIRST**

Answer: D

NEW QUESTION # 165

A Data Analyst wants to create the following table in a view:

Employee	Position	Salary
Corporate		700,540
Global Office		420,000
Consultant		1,500,000

Which function should the analyst use to create the Position column?

- A. LAST
- B. INDEX
- C. RANK
- **D. FIRST**

Answer: D

NEW QUESTION # 166

You are creating a new dashboard.

You need to add a button to the dashboard that allows users to export the dashboard as an image.

Which type of object should you use?

- A. Download
- **B. Extension**
- C. Ask Data
- D. Navigation
- E. Image

Answer: B

Explanation:

Extensions in Tableau are web-based programs that can interact with dashboards. To add a button that allows users to export the dashboard as an image, you would use an Extension object. This could be a custom extension designed to trigger the download of the dashboard view as an image.

NEW QUESTION # 167

You have a data source that contains data for every city in the United States. The following is a sample of the data.

You need to use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million.

Which type of filter should you use?

- A. General filter
- **B. Condition filter**
- C. Top filter
- D. Wildcard filter

Answer: B

Explanation:

To use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million, you should use a condition filter. A condition filter is a type of filter that shows only the values that meet a specified condition based on a measure or a calculation. You can create a condition filter by dragging a dimension to the Filters shelf and selecting Condition from the dialog box. Then you can enter a formula or choose an option that defines your condition.

In this case, you want to create a condition filter based on Population, which is a measure. You can drag City to the Filters shelf and select Condition from the dialog box. Then you can choose By field from the tab and select Population > Sum > Greater than > 1000000 from the drop-down lists. This will create a condition filter that shows only the cities that have a sum of population greater than one million.

The other options are not correct for this scenario. A general filter is not a specific type of filter, but a term that refers to any type of filter in Tableau. A wildcard filter is a type of filter that shows only the values that match a specified pattern or string, such as "New*" or "*ton". A top filter is a type of filter that shows only the top or bottom N values of a measure or dimension based on a ranking or an aggregation. References:

NEW QUESTION # 168

You have a data source that has two tables named Table1 and Table2. Table1 is the primary table and Table2 is the secondary table.

You want to combine the tables by using Tableau Prep. The combined table must include only values from Table1 that do NOT match any values in Table2. The field values from Table2 must appear as null values.

Which type of join should you use?

- A. Union
- B. Full outer
- **C. Left only**

- D. Inner
- E. Left

Answer: C

Explanation:

To combine the tables by using Tableau Prep and include only values from Table1 that do not match any values in Table2, you should use a left only join. A left only join is a type of join that returns only the rows from the primary table (Table1) that have no matching rows in the secondary table (Table2). The field values from Table2 will appear as null values in the combined table. A left only join is also known as an anti-join or an exclusion join. References:
