As you know, it is not easy to be famous among a lot of the similar companies. Fortunately, we have survived and developed well. So our company has been regarded as the most excellent seller of the SAFe-Practitioner learning materials. We positively assume the social responsibility and manufacture the high quality SAFe-Practitioner study braindumps for our customers. And with the best SAFe-Practitioner training guide and the best services, we will never be proud to do better in this career.

Scrum SAFe-Practitioner (SAFe 5 Practitioner (SP)) Exam is a certification program designed to validate the knowledge and skills of professionals who are interested in working within a Lean-Agile environment. SAFe-Practitioner exam is based on the Scaled Agile Framework (SAFe) methodology, which is a widely-used approach to Agile software development that helps organizations scale Agile practices to larger teams and complex projects. The SAFe 5 Practitioner (SP) Exam is a valuable credential for individuals who want to demonstrate their expertise in SAFe principles and practices, and showcase their ability to work effectively within a SAFe enterprise.

Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q184-Q189):

NEW QUESTION # 184

Which of the following types of Enabler Stories is used for building and evaluating prospective Solutions alternatives?

- A. Compliance
- B. Infrastructure
- C. Exploration
- D. Architecture

Answer: C

Explanation:

According to the SAFe-for-Teams-SAFe-Practitioner-6-0 documents, enabler stories are short descriptions of a small piece of desired functionality that support exploration, architecture, infrastructure, or compliance.

Among these four types of enabler stories, exploration is the one that is used for building and evaluating prospective solutions alternatives. Exploration enabler stories support research, prototyping, and other activities needed to develop an understanding of customer needs, including the exploration of prospective solutions and evaluation of alternatives. They help validate assumptions, reduce uncertainty, and increase the likelihood of building the right thing. Therefore, the correct answer is A. Exploration.

NEW QUESTION # 185

Which statement is a value from the Agile Manifesto?

- A. Customer collaboration over contract negotiation
- B. Customer collaboration over a constant indefinite pace
- C. Customer collaboration over Feature negotiation
- D. Customer collaboration over ongoing internal conversation

Answer: A

Explanation:

This statement is one of the four values of the Agile Manifesto, which is a foundational document for the Agile movement and the SAFe framework. The value emphasizes the importance of working closely with the customers and stakeholders to deliver value and meet their needs, rather than relying on rigid and formal contracts that may not reflect the changing requirements and expectations.

NEW QUESTION # 186

Which statement describes a cross-functional team?

- A. Each team member can define, build, and test a component or Feature
- B. Each team can deliver Features across multiple domains
- C. Each team member can define and build, with a System Team testing the Solution
- D. Each team member can do all the activities to define, build, and test a Solution

Answer: A

Explanation:

A cross-functional team is a group of people with different functional expertise working toward a common goal¹. In SAFe, a cross-functional team has all the necessary skills to turn an idea into a working product². This means that each team member can define,

build, and test a component or Feature, without relying on external dependencies or handoffs³. This enables the team to deliver value faster, with higher quality and lower risk. NEW QUESTION # 187

What is the product vision?

- A. A set of prioritized Features
- B. An explanation of the architectural runway needed to deliver products to the customer
- **C. A method for aligning to the product direction**
- D. The user stories required to meet customer needs

Answer: C

Explanation:

The product vision is a description of the future state of the product or service under development. It reflects customer and stakeholder needs, as well as the features and capabilities proposed to meet those needs. The product vision is both aspirational and achievable, providing the broader context and purpose of the product or service. It describes the markets, customer segments, user needs, and how the product or service will be different from the competition. The product vision is owned by the product owner, but its development requires input from stakeholders and the scrum team(s). The product vision helps align the team to the product direction and motivates them to deliver value to the customers and stakeholders. NEW QUESTION # 188

Which of the following basic quality practices applies to all teams?

- A. Modeling and simulation
- B. Agile architecture
- **C. Collective ownership and standards**
- D. Rapid prototyping

Answer: C

Explanation:

Collective ownership and standards are basic quality practices that apply to all teams, regardless of their domain or work product. They promote shared responsibility, accountability, and alignment among team members and across teams¹. They also enable faster feedback, continuous improvement, and reduced waste².

The other options are not basic quality practices, but rather specific techniques or approaches that may be useful for some teams or domains, but not all. Agile architecture is a way of designing and evolving systems that support the delivery of value and quality³. Rapid prototyping is a way of creating and testing a minimum viable product (MVP) to validate assumptions and learn from customers⁴. Modeling and simulation are ways of representing and analyzing complex systems or phenomena using mathematical or computational methods.
