Customizable CompTIA SK0-005 Practice Exams to Enhance Test Preparation (Desktop + Web-Based)

Choosing valid CompTIA dumps means closer to success. Before you buy our products, you can download the free demo of SK0-005 test questions to check the accuracy of our dumps. Besides, there are 24/7 customer assisting to support you in case you may have any questions about SK0-005 Dumps PDF or download link.

CompTIA Server+ Certification Exam Sample Questions (Q420-Q425):

NEW QUESTION # 420

A company deploys antivirus, anti-malware, and firewalls that can be assumed to be functioning properly. Which of the following is the MOST likely system vulnerability?

- A. Ransomware
- B. Worms
- C. Insider threat
- D. Two-person integrity
- E. Open ports

Answer: C

Explanation:

Insider threat is the most likely system vulnerability in a company that deploys antivirus, anti-malware, and firewalls that can be assumed to be functioning properly. An insider threat is a malicious or negligent act by an authorized user of a system or network that compromises the security or integrity of the system or network. An insider threat can include data theft, sabotage, espionage, fraud, or other types of attacks. Antivirus, anti-malware, and firewalls are security tools that can protect a system or network from external threats, such as viruses, worms, ransomware, or open ports. However, these tools cannot prevent an insider threat from exploiting their access privileges or credentials to harm the system or network.

NEW QUESTION # 421

A technician is working on a Linux server and is trying to access another server over the network. The technician gets server not found message when trying to execute ping servername but no error messages when using ping servername. Domain.com. Which of the following should the technician do to resolve the error?

- A. Configure the DNS address
- B. Change the permissions on resolv.conf
- C. Configure the domain search variable
- D. Modify nsswitch.conf

Answer: C

Explanation:

The domain search variable is used to specify a list of domains that are appended to a hostname when resolving it. If the servername is not fully qualified, the resolver will try each domain in the list until it finds a match or fails. By configuring the domain search variable, the technician can avoid typing the full domain name every time they want to ping a server. Verified References: [How to configure DNS suffixes on Linux systems]

NEW QUESTION # 422

A Linux server was recently updated. Now, the server stops during the boot process with a blank screen and an Es prompt. Which of the following is the MOST likely cause of this issue?

- A. The BIOS firmware needs to be upgraded
- B. The BIOS could not find a bootable hard disk
- C. The system is booting to a USB flash drive
- D. The UEFI boot was interrupted by a missing Linux boot file

Answer: D

Explanation:

Explanation

The most likely cause of this issue is that the UEFI boot was interrupted by a missing Linux boot file, such as grub.cfg or vmlinuz, which are essential for loading the Linux kernel and booting the system. The sE prompt indicates that the system entered into UEFI Shell mode, which is a command-line interface for troubleshooting UEFI boot issues. The administrator can use UEFI Shell commands to locate and restore the missing boot file or change the boot order. Verified References: [UEFI Shell Guide]

NEW QUESTION # 423

A Linux server was recently updated. Now, the server stops during the boot process with a blank screen and an Es> prompt. When of the following is the MOST likely cause of this issue?

- A. The BIOS firmware needs to be upgraded
- B. The BIOS could not find a bootable hard disk
- C. The system is booting to a USB flash drive
- D. The UEFI boot was interrupted by a missing Linux boot file

Answer: D

Explanation:

The most likely cause of this issue is that the UEFI boot was interrupted by a missing Linux boot file, such as grub.cfg or vmlinuz, which are essential for loading the Linux kernel and booting the system. The Es> prompt indicates that the system entered into UEFI Shell mode, which is a command-line interface for troubleshooting UEFI boot issues. The administrator can use UEFI Shell commands to locate and restore the missing boot file or change the boot order. Verified Reference: [UEFI Shell Guide]

NEW QUESTION # 424

Which of the following cloud models is BEST described as running workloads on resources that are owned by the company and hosted in a company-owned data center, as well as on rented servers in another company's data center?

- A. Community
- B. Hybrid
- C. Public
- D. Private

Answer: B

Explanation:

Explanation

This is the best description of a hybrid cloud model because it combines both private and public cloud resources. A private cloud is a cloud environment that is owned and operated by a single organization and hosted in its own data center. A public cloud is a cloud environment that is owned and operated by a third-party provider and hosted in its data center. A hybrid cloud allows an organization to leverage both types of cloud resources depending on its needs and preferences.
