## Talend-Core-Developer Valid Dumps Questions, Talend-Core-Developer 100% Exam Coverage

We can say that how many the Talend-Core-Developer certifications you get and obtain qualification certificates, to some extent determines your future employment and development, as a result, the Talend-Core-Developer exam guide is committed to helping

you become a competitive workforce, let you have no trouble back at home. Actually, just think of our Talend-Core-Developer Test Prep as the best way to pass the Talend-Core-Developer exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time.

## Talend Core Certified Developer Exam Sample Questions (Q41-Q46):

### NEW QUESTION # 41

You are building a Job to run outside Talend Studio that must run on both Linux and Windows.  
Which action should you take when building the Job?

- A. Build one package for each platform.
- B. Configure the Job properties building the Job.
- C. Select Build Job because Jobs are runnable on all platforms
- D. Specify All for the Shell launcher option in the Build Job windows.

**Answer: D**

Explanation:

To build a job to run outside Talend Studio that must run on both Linux and Windows, you need to select Build Job because jobs are runnable on all platforms. The Build Job option allows you to export your job as an executable file that can be run independently from Talend Studio on any platform that supports Java. You can access this option by right-clicking on your job in the Repository tree view and selecting Build Job. This will open a dialog box where you can configure the build settings, such as destination folder, archive name, context, etc.

You do not need to specify All for the Shell launcher option in the Build Job window, configure the job properties before building the job, or build one package for each platform. These methods are not necessary or available in Talend Studio and may cause errors or unexpected results. References: Talend Open Studio:

Open-source ETL and Free Data Integration | Talend, [Build Job - 7.3]

### NEW QUESTION # 42

You can initialize your component endpoint, API mappings, and documentation from your API definition.  
Which API definitions are supported by tRESTRequest?

- A. OAS/Swagger 2.0 file
- B. CSV definition file
- C. WSDL file
- D. XML definition file

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation:

The tRESTRequest component supports OpenAPI Specification (OAS)/Swagger 2.0 for initializing component endpoints, API mappings, and documentation.

\* OAS/Swagger 2.0 file (Correct Answer - Option D):

\* tRESTRequest allows API-first development by importing a Swagger 2.0 (OAS) definition.

\* This enables automatic configuration of API endpoints, request parameters, and response structures.

\* Why not other options?

\* CSV definition file (Option A): Not a valid API definition format.

\* XML definition file (Option B): XML files are not standard for REST API definitions.

\* WSDL file (Option C): WSDL is used for SOAP-based web services, not REST.

### NEW QUESTION # 43

Which file should you edit to enable SSL for a JobServer?

- A. Conf/TalendServer.properties
- B. Conf/server.xml
- C. Conf/TalendJobServer.properties
- D. Jsl\_stat64.ini

**Answer: C**

Explanation:

To enable SSL for a JobServer, you need to edit the `conf/TalendJobServer.properties` file. A JobServer is a server application that allows you to execute jobs remotely from Talend Studio or Talend Administration Center. The `conf/TalendJobServer.properties` file contains various configuration parameters for your JobServer, such as port number, log level, security options, etc. To enable SSL for your JobServer, you need to set the `sslparameter` to true and provide the path and password of your keystore file that contains your SSL certificate.

You do not need to edit `conf/TalendServer.properties`, `conf/server.xml`, or `jsl_static64.ini` files. These files are not related to JobServer configuration or SSL settings. The `conf/TalendServer.properties` file is used to configure Talend Administration Center settings, such as database connection, LDAP authentication, email notification, etc. The `conf/server.xml` file is used to configure Tomcat server settings, such as connectors, realms, valves, etc. The `jsl_static64.ini` file is used to configure Java Service Launcher settings, such as service name, description, startup type, etc. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Configuring Talend JobServer - 7.3], [Configuring Talend Administration Center - 7.3], [Configuring Tomcat - 7.3], [Installing Java Service Launcher - 7.3]

#### NEW QUESTION # 44

Which actions can you perform in the configuration panel in Pipeline Designer? Choose 2 answers.

- A. Select the settings for a pipeline export.
- **B. Modify processor values.**
- C. Preview changes made by processors.
- **D. Display and update dataset connections.**

**Answer: B,D**

Explanation:

Comprehensive and Detailed Explanation:

In Talend Pipeline Designer, the configuration panel provides options for managing and modifying the settings of components within a pipeline.

\* Modify processor values (Option A):

\* Users can adjust values for processors such as filters, joins, transformations, and aggregations within the configuration panel.

\* This helps fine-tune data processing rules directly in the pipeline.

\* Display and update dataset connections (Option B):

\* The configuration panel allows users to change dataset connections, updating the source or target locations of data.

\* Users can modify database credentials, file paths, or API endpoints as needed.

Why not other options?

\* Option C: The ability to preview changes made by processors is handled in the preview panel, not the configuration panel.

\* Option D: Pipeline export settings are managed separately in the export settings menu, not in the configuration panel.

#### NEW QUESTION # 45

What are the key capabilities of Talend Cloud Data Preparation that improve data quality and accessibility? Choose 3 answers.

- **A. Cleanse data**
- **B. Standardize data**
- C. Discover
- **D. Transform**
- E. Format data

**Answer: A,B,D**

Explanation:

Comprehensive and Detailed Explanation:

Talend Cloud Data Preparation enhances data quality and accessibility through:

\* Cleanse data (Option C):

\* Identifying and correcting inaccuracies or inconsistencies to ensure data integrity.

\* Transform (Option D):

\* Modifying data structures or values to meet specific requirements or formats.

\* Standardize data (Option E):

\* Ensuring uniformity in data presentation and format, facilitating consistency across datasets.

Why not other options?

\* Option A: Discovery is typically associated with data profiling, not preparation.

\* Option B: Formatting is a subset of transformation and standardization processes.

## NEW QUESTION # 46

.....

Our company concentrates on relieving your pressure of preparing the Talend-Core-Developer exam. Getting the certificate equals to embrace a promising future and good career development. Perhaps you have heard about our Talend-Core-Developer exam question from your friends or news. Why not has a brave attempt? You will certainly benefit from your wise choice. Now our Talend-Core-Developer practice materials have won customers' strong support. Our sales volume is increasing every year. The great achievements benefit from our enormous input. First of all, we have done good job on researching the new version of the Talend-Core-Developer exam question.
