

Exam Topics VMware 2V0-11.25 Pdf & Reliable 2V0-11.25 Test Experience

Download the latest 2V0-11.25 exam dumps PDF for Preparation

Exam : 2V0-11.25

**Title : VMware Cloud Foundation
5.2 Administrator Exam**

<https://www.passcert.com/2V0-11.25.html>

1 / 7

P.S. Free 2025 VMware 2V0-11.25 dumps are available on Google Drive shared by TestSimulate: <https://drive.google.com/open?id=1ZNMZICgw8JS3peIF5S7Tkn4Kw5bcfDwZ>

We are a group of IT experts to provide professional study materials to people preparing VMware certification exam. There are free demo you can download to check the accuracy of our 2V0-11.25 Braindumps. It just needs to take one or two days to practice TestSimulate 2V0-11.25 dumps torrent and review the key points of our pass guide. Clearing exam is 100% guaranteed.

If you buy our 2V0-11.25 training quiz, you will find three different versions are available on our test platform. According to your need, you can choose the suitable version for you. The three different versions of our 2V0-11.25 study materials include the PDF version, the software version and the online version. We can promise that the three different versions are equipped with the high quality. If you purchase our 2V0-11.25 Preparation questions, it will be very easy for you to easily and efficiently find the exam focus and pass the 2V0-11.25 exam.

**2025 100% Free 2V0-11.25 –High Pass-Rate 100% Free Exam Topics Pdf |
Reliable 2V0-11.25 Test Experience**

The online 2V0-11.25 practice exam has all specifications of the desktop software. It is compatible with Chrome, Firefox, MS

Edge, Safari, Opera, etc. The VMware Cloud Foundation 5.2 Administrator (2V0-11.25) practice exam will save your progress and give you an overview of your mistakes, which will benefit your overall preparation. All operating systems support this VMware Cloud Foundation 5.2 Administrator (2V0-11.25) practice test.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q57-Q62):

NEW QUESTION # 57

Which feature of VMware Lifecycle Manager allows an administrator to manage the lifecycle of ESXi hosts by applying a consistent image across the hosts in a cluster? (Choose three.)

- A. Create an encryption policy in vCenter.
- B. Configure a Key Management Server (KMS) and add it to vCenter
- C. Enable SSH on the ESXi hosts to manage encryption keys.
- D. Apply the encryption policy to the existing VMs.
- E. Enable the encryption feature on the ESXi hosts.

Answer: A,B,D

Explanation:

A Key Management Server (KMS) is required to manage encryption keys in the environment, ensuring that encrypted data is securely managed across ESXi hosts.

Creating an encryption policy in vCenter allows administrators to define how encryption is applied to virtual machines and data.

Applying the encryption policy to the existing VMs ensures that the encryption settings are enforced on virtual machines that require protection.

NEW QUESTION # 58

An administrator is configuring a newly provisioned workload domain within a VMware Cloud Foundation (VCF) environment. The workload domain will contain virtual machines hosting applications which are considered business critical, and the administrator wants to ensure that the virtual machines are given priority over other network traffic types.

Which three steps should the administrator perform to achieve this goal? (Choose three.)

- A. Configure a bandwidth resource allocation for the virtual machine traffic type.
- B. Create a new vSphere Distributed Switch (vDS) specifically for virtual machine traffic.
- C. Configure dedicated physical network adapters for the ESXi management traffic.
- D. Configure a new network resource pool to assign shares, limits and reservations for the virtual machine traffic.
- E. Disable bandwidth resource allocations for all other traffic types to ensure virtual machine traffic gets full bandwidth.
- F. Enable Network I/O control (NIOC) on the workload domain vSphere Distributed Switch (vDS).

Answer: A,D,F

Explanation:

According to the VMware Cloud Foundation 5.2 Administration Guide and the official vSphere Networking documentation, prioritizing virtual machine (VM) network traffic for business-critical applications in a VCF environment requires configuring Network I/O Control (NIOC) on the vSphere Distributed Switch (vDS), allocating bandwidth resources, and creating resource pools for VM traffic. Below are the exact extracts and official explanations:

Option A: Configure a bandwidth resource allocation for the virtual machine traffic type. Extract from official VMware documentation:

"With Network I/O Control (NIOC) enabled on the vSphere Distributed Switch, you can allocate bandwidth to specific network resource types such as virtual machine traffic. Configuring bandwidth allocation ensures that business-critical VM traffic is prioritized on the physical network." (VMware vSphere Networking Guide) Option B: Enable Network I/O control (NIOC) on the workload domain vSphere Distributed Switch (vDS).

Extract:

"Network I/O Control must be enabled on the vSphere Distributed Switch to use features such as bandwidth allocation and resource pools. This allows you to guarantee minimum bandwidth and prioritize specific traffic types, including VM traffic."

(VMware vSphere Networking Guide, VMware Cloud Foundation Administration Guide) Option F: Configure a new network resource pool to assign shares, limits and reservations for the virtual machine traffic. Extract:

"Network resource pools allow administrators to assign shares, limits, and reservations to virtual machine traffic on the vSphere Distributed Switch. This ensures that business-critical workloads receive the necessary network resources, even in times of contention." (VMware vSphere Networking Guide) Why Not the Other Options?

Option C: Creating a new vDS is not required specifically for prioritizing VM traffic; this can be done within the existing vDS.

Option D: While dedicated adapters can help with physical separation, they do not control network priority among traffic types within the vDS.

Option E: Disabling all other allocations is not recommended or supported and could disrupt other network operations.

Summary:

To ensure business-critical virtual machine traffic is prioritized over other types, the administrator should:

Enable NIOC on the vDS (B),

Configure bandwidth resource allocations for VM traffic (A), and

Create a new network resource pool to set shares, limits, and reservations for VM traffic (F). These steps are outlined and supported by the official VMware Cloud Foundation and vSphere Networking documentation.

NEW QUESTION # 59

An administrator recently incorrectly deployed a new isolated VI workload domain within an existing VMware Cloud Foundation (VCF) instance.

How can the administrator reconfigure the VI workload domain to share the SSO domain from the management workload domain?

- A. From the VI workload domain vCenter Server instance, add the management domain SSO and remove the isolated SSO.
- B. From the management domain vCenter Server instance, use the rsautl command to add the VI workload domain to the management domain.
- C. A new VI workload domain must be created through SDDC Manager.
- D. From the SDDC Manager console, migrate the VI workload domain to the management domain.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

According to VMware Cloud Foundation documentation, once a VI workload domain has been deployed as an isolated domain (with its own SSO), it cannot be reconfigured after deployment to join the management domain's SSO domain. The official guidance states that the only supported approach is to delete the incorrectly configured VI workload domain and create a new one through SDDC Manager, ensuring it is properly configured to share the SSO domain with the management domain during the deployment process. There is no supported process to convert or migrate an existing isolated SSO VI workload domain to a shared SSO configuration after deployment.

NEW QUESTION # 60

An administrator is using VMware Aria Automation to automate the provisioning of virtual machines in their VMware Cloud Foundation environment. They notice that the automation workflows are failing frequently and want to troubleshoot the issue.

What step should the administrator take in VMware Aria Operations for Logs to diagnose the cause of the automation workflow failures?

- A. Check the Audit Logs to see if there are any unauthorized access attempts.
- B. Review the Alert Definitions to ensure alerts for workflow failures are configured.
- C. Use the Interactive Analytics feature to search for error messages related to the workflows.
- D. Access the Dashboard to get an overview of system health and performance metrics.

Answer: C

Explanation:

To diagnose the cause of automation workflow failures in VMware Aria Automation, the Interactive Analytics feature in VMware Aria Operations for Logs allows administrators to search for error messages and filter logs related to the specific workflows. This feature enables detailed analysis of log data to identify any underlying issues causing the failures.

NEW QUESTION # 61

Which feature of VMware Data Services Manager enhances security and compliance?

- A. Network traffic encryption
- B. Storage replication
- C. Database level authentication
- D. Automated workload migration

Answer: C

Explanation:

VMware Data Services Manager™ offers modern database and data services management for vSphere. It is a solution that provides a data-as-a-service toolkit for on-demand provisioning and automated management of PostgreSQL and MySQL databases in vSphere environment. <https://techdocs.broadcom.com/us/en/vmware-cis/dsm/data-services-manager/2-1/about-vmware-data-services-manager.html>

NEW QUESTION # 62

.....

We know that most candidates have a busy schedule, making it difficult to devote much time to their VMware Cloud Foundation 5.2 Administrator (2V0-11.25) test preparation. TestSimulate offers VMware 2V0-11.25 exam dumps in 3 formats to open up your study options and adjust your preparation schedule. Furthermore, it works on all smart devices. This 2V0-11.25 Exam Dumps format is easy to download from our TestSimulate and a VMware Cloud Foundation 5.2 Administrator (2V0-11.25) free demo version is also available. You can check the material before you buy it.
