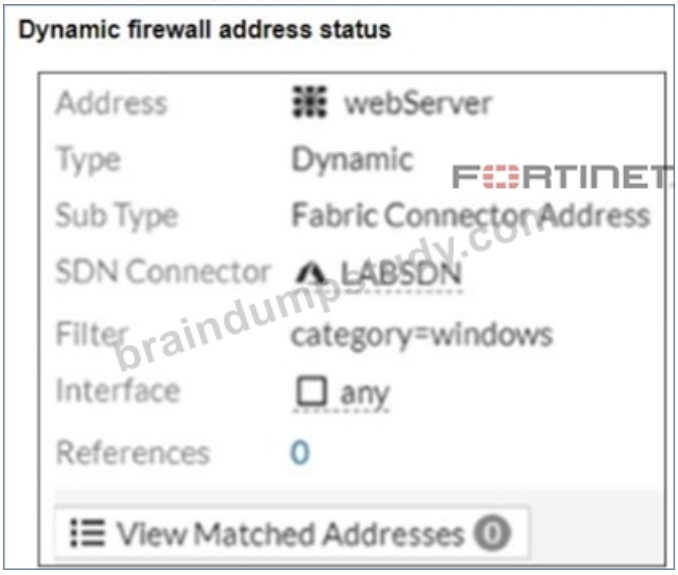
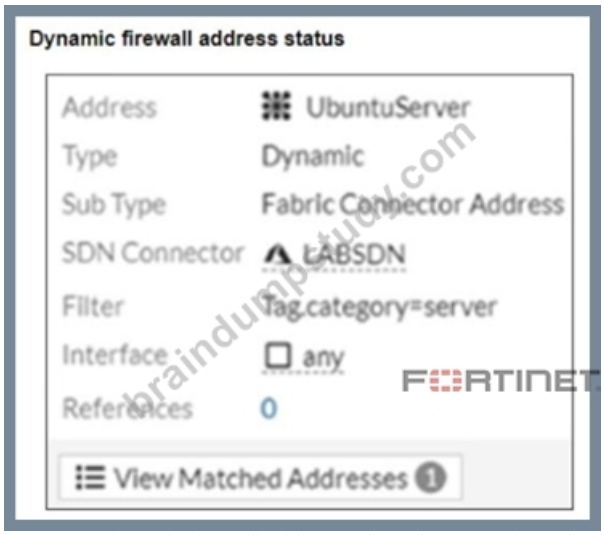
Dynamic firewall address status





Two new dynamic firewall addresses have been configured on the FortiGate VM using the external connector to Integrate within the same Azure environment.
The debug output shows that one IP address can be resolved successfully, but the second is empty.
Which steps could you perform to correct the misconfiguration? (Choose all that apply.)

- A. Check for a mistyped Microsof Entra ID subscription
- B. Verify the filter used for the dynamic firewall address
- C. Verify the tags on the target VM
- D. Verify the NSG for the target VM
- E. Verify the Microsoft Entra ID role assignment access rights

Answer: B,C

Explanation:
The debug output shows that the UbuntuServer address object successfully resolved an IP, while the webServer did not. The most likely cause is a mismatch in the dynamic address filter or missing tags on the target VM.
Verify the filter used for the dynamic firewall address - The filter category=windows may not match any VM metadata, resulting in no matched addresses.
Verify the tags on the target VM - Ensure that the VM has the correct tags (e.g., category=windows) that match the dynamic address filter to enable resolution.

NEW QUESTION # 33

- A. Load balancing enabled by the simultaneous connection of each branch to multiple hubs
- B. Enhanced scalability enables communication between branch offices
- C. Increased security through isolated connections between branches and hubs
- D. Improved branch-to-branch communication for faster data transfer

Answer: D

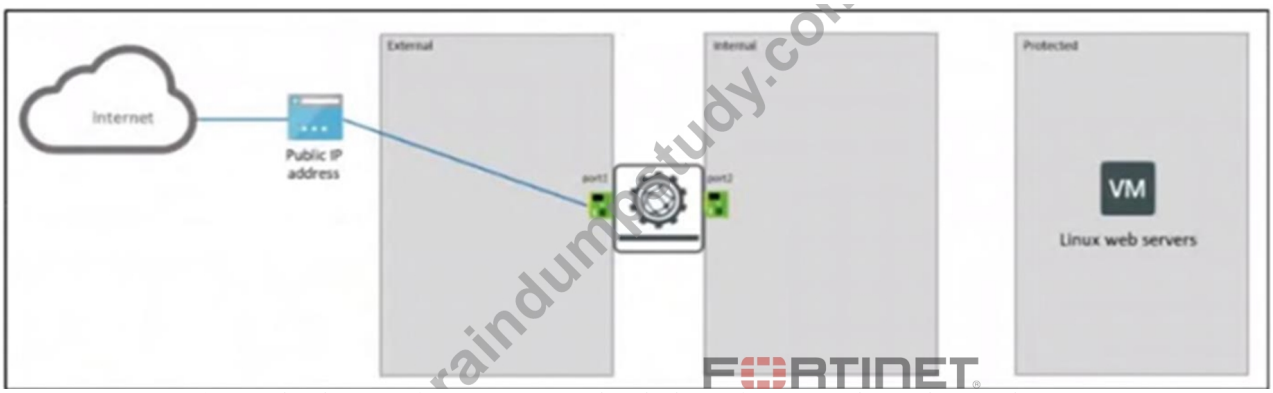
NEW QUESTION # 34
Refer to the exhibit.



Your company runs front-end web servers in Azure. You need to deploy a Linux VM to be used as a web server.
To protect your web servers with a web application firewall (WAF), you deploy FortiWeb to secure applications from web-based attacks.
Which FortiWeb operation mode can you implement for this scenario?

- A. Transparent inspection
- B. Reverse proxy
- C. Passive monitoring
- D. True transparent proxy

Answer: B

Explanation:
TheReverse Proxymode is the most appropriate FortiWeb operation mode for this scenario. In this mode, FortiWeb sits between internet users and the Linux web servers, terminating client connections and then forwarding requests to the backend servers. This enablesdeep inspection, protection from web attacks (like SQL injection and XSS), andfull WAF functionality, making it ideal for securing front-end web servers exposed to the internet.

- D. NSGs allow the filtering of inbound traffic only.

Answer: C

Explanation:
Alimitation of NSGsis that they are applied only at thesubnet level or to network interfaces (vNICs), not directly to other resources like load balancers or application gateways. This meansgranular application- layer filteringis not supported, andNSGs primarily operate at Layers 3 and 4.
