Scaled Agile SAFe Practice Consultant SPC (6.0) Sample Questions (Q55-Q60):

NEW QUESTION # 55

What is true about Epic implementation?

- A. Re-prioritization happens at every PI boundary, and the rest of the Epic can be postponed or canceled if there are more important new initiatives.
- B. Once pulled into implementation, the Epic needs to be finished.
- C. A budget reserve is established that can be used to fund Epics.
- D. Agile Release Trains are empowered to decide whether or not they proceed with a Portfolio Epic.

Answer: A

Explanation:

SAFe recommends regular re-prioritization at PI boundaries. An Epic does not need to be finished once started; if new, higher-priority work arises, the remaining part of the Epic can be postponed or even canceled.

"Epics may be re-prioritized or stopped if they are no longer the highest economic value work. This can occur at any PI boundary." (Source: SAFe 6.0 Framework: Epic Owner, Portfolio Backlog Management)

NEW QUESTION # 56

Velocity is a good measure of team performance.

- A. True
- B. False

Answer: B

Explanation:

Velocity is a measure of how much work a team completes in an iteration, but it is not a measure of performance. Velocity helps teams plan and forecast, but it should not be used to compare teams or assess individual performance. Using velocity as a performance metric can lead to gaming and diminished quality.

"Velocity is a planning tool, not a performance metric. Comparing velocities between teams or using velocity to assess team performance is discouraged." (Source: SAFe 6.0 Framework: Team Metrics; SPC 6.0 Guide, "Establishing Team and Technical Agility")

NEW QUESTION # 57

You organization decided to thoroughly implement the SAFe Principle "Assume variability; preserve options."
What is the optimum path for success?

- A. Assume variability of scope, but have fixed Solution Context.
- B. Assume variability of scope and preserve options for the release date.
- **C. Preserve flexibility in both system functionality and design.**
- D. Preserve flexibility in system functionality and design, but have fixed Solution intent.

Answer: C

NEW QUESTION # 58

[Establishing Team and Technical Agility]

Iteration Goals have business value assigned by the Product Owner.

- A. True
- **B. False**

Answer: B

Explanation:

PI Objectives (not Iteration Goals) are assigned business value by Business Owners at PI Planning. Iteration Goals are set by the team and Product Owner for focus during the iteration but are not assigned a separate business value metric.

"Business Owners assign business value to PI Objectives during PI Planning. Iteration Goals, which guide team focus during an iteration, are not assigned business value." (Source: SAFe 6.0 Framework: PI Objectives, Iteration Goals)

NEW QUESTION # 59

What is NOT a SAFe-recommended Metric?

- **A. Number of lines of code produced.**
- B. Number of new test cases automated.
- C. Percent of unit test coverage.
- D. Percent of user stories accepted by the Product Owner.
- E. Number of defects outstanding.
- F. Number of test cases produced.

Answer: A

Explanation:

SAFe does not recommend using the number of lines of code produced as a metric because it does not correlate with value, quality, or customer outcomes. Other metrics listed are used to assess quality, progress, or value delivery.

References:

SAFe 6.0 Website: Metrics

SPC 6.0 Guide: "Output-based metrics such as lines of code are discouraged; focus on outcomes and quality."

NEW QUESTION # 60

.....

Certification SAFe-SPC exam on the first attempt. The demand of the SAFe Practice Consultant SPC (6.0) exam is growing at a rapid pace day by day and almost everyone is planning to pass it so that they can improve themselves for better futures in the PDF4Test sector.
