In this age of advanced network, there are many ways to prepare UiPath UiPath-SAIv1 certification exam. ActualtestPDF provides the most reliable training questions and answers to help you pass UiPath UiPath-SAIv1 Certification Exam. ActualtestPDF have a variety of UiPath certification exam questions, we will meet you all about IT certification.

UiPath Certified Professional Specialized AI Professional v1.0 Sample Questions (Q137-Q142):

NEW QUESTION # 137

What is the role of the dispatcher in the Document Understanding Process?

- A. To process multiple files simultaneously in bulk.
- B. To handle logging and exception mechanisms.
- C. To ensure one job is created for each input file.
- D. To manage downstream processes where the extracted Information is used

Answer: C

Explanation:

In the Document Understanding framework, the dispatcher is responsible for ensuring that one job is created for each input file. It works by submitting files to be processed individually, ensuring that each document or group of documents is handled as a separate transaction. This allows for more efficient processing and better tracking of each file, especially in high-volume workflows where managing each file as a separate job is critical for performance and error handling.

NEW QUESTION # 138

What is the correct order of uploading a package exported from UiPath AI Center?

Instructions: Drag the steps found on the "Left" and drop them on the "Right" in the correct order.

Steps

Export the package from AI Center.

In the Upload package field, add the zip file downloaded using the Downloading ML Packages procedure. With the same procedure, download the JSON file and add it to the Upload metadata JSON field.

Click Create.

On the ML Packages page, click the Import ML Package button. The Import new package page is displayed.

* Export the package from AI Center. This is the first step where you prepare the package to be moved.

* On the ML Packages page, click the Import ML Package button. This step is where you start the process of importing the package you've exported.

* On the Upload package field, add the zip file downloaded using the Downloading ML Packages procedure. After starting the import process, you will upload the actual package.

* Click Create. This is the final step where you finalize the uploading process of your ML package. Please proceed with these steps in the UiPath AI Center to upload your exported package correctly.

NEW QUESTION # 139

What happens during the Classify stage of the Document Understanding Framework?

- A. The extracted data is exported as a dataset.
- B. The OCR engine is used to extract text from the image document.
- C. The target fields are extracted from the document and sent to Action Center for human validation.
- **D. The documents are included in one of the taxonomy document types or skipped.**

Answer: D

NEW QUESTION # 140

What is supervised learning?

- **A. Supervised learning is a machine learning paradigm with the goal of learning a function that maps input variables with output variables.**
In every case there is a correct answer, so the aim is to train the model until it reaches an acceptable level of performance in predicting the outcome, at which point the learning stops.
- B. Supervised learning is a machine learning paradigm in which algorithms try to solve a problem in an uncertain, potentially complex environment only by trial and error and using a system of rewards and punishments.
There are no correct answers, but feedback is given in the form of rewards and penalties.
- C. Supervised learning is a machine learning paradigm in which algorithms try to solve a problem only by trial and error and using a system of rewards and punishments.
There is no need for labeled input/output pairs to be presented. Instead, the focus is on finding a balance between exploration (of uncharted territory) and exploitation (of current knowledge).
- D. Supervised learning is a machine learning paradigm that refers to algorithms that learn patterns from unlabeled data. There are only input variables, but no corresponding output variables. The goal of the algorithm is to model the underlying structure of the data, but there are no correct answers and no teachers.

Answer: A

Explanation:

Supervised learning is one of the most popular and widely used machine learning approaches. It involves providing the algorithm with labeled input/output pairs, which serve as examples of the desired behavior or outcome. The algorithm then learns a function that can generalize from these examples and make predictions for new, unseen data. Supervised learning can be used for tasks such as classification, regression, and anomaly detection. Some common supervised learning algorithms are linear regression, logistic regression, decision trees, support vector machines, and neural networks.

NEW QUESTION # 141

Which UiPath Communications Mining model performance factor assesses the proportion of the entire dataset that has informative label predictions?

- A. Balance.
- **B. Coverage.**
- C. Underperforming labels.
- D. Average label performance.

Answer: B

Explanation:

According to the UiPath Communications Mining documentation, coverage is one of the four main factors that contribute to the model rating, which is a holistic measure of the model's performance and health.

Coverage assesses the proportion of the entire dataset that has informative label predictions, meaning that the predicted labels are not generic or irrelevant. Coverage is calculated as the percentage of verbatims (communication units) that have at least one informative label out of the total number of verbatims in the dataset. A high coverage indicates that the model is able to capture the main topics and intents of the communications, while a low coverage suggests that the model is missing important information or producing noisy predictions.
