Selecting The Exams C-CPI-2506 Torrent Means that You Have Passed SAP Certified Associate - Integration Developer

If you buy C-CPI-2506 study materials, you will get more than just a question bank. You will also get our meticulous after-sales service. The purpose of the C-CPI-2506 study materials' team is not to sell the materials, but to allow all customers who have purchased C-CPI-2506 study materials to pass the exam smoothly. The trust and praise of the customers is what we most want. We will accompany you throughout the review process from the moment you buy C-CPI-2506 Study Materials. We will provide you with 24 hours of free online services. All our team of experts and service staff are waiting for your mail all the time.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 2	• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

Topic 3	Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 4	SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.

SAP Certified Associate - Integration Developer Sample Questions (Q10-Q15):

NEW QUESTION # 10

You have set up a basic authentication policy, but the API proxy returns an HTTP status of 401. What could be a reason?

- A. In the AssignMessage policy, the Assign To tag has the type="postFlow"
- B. In the AssignMessage policy, the Assign To tag has the type="response"
- C. In the AssignMessage policy, the Assign To tag has the type="request"
- D. In the AssignMessage policy, the Assign To tag has the type="preFlow"

Answer: C

Explanation:

In API Management (SAP Integration Suite), when implementing Basic Authentication policies:

If the AssignMessage policy does not correctly assign credentials to the request message, authentication will fail.

This results in HTTP 401 Unauthorized.

Other tags like preFlow, postFlow, response are policy flow phases, but the credentials must be applied to the request for proper authentication.

Thus, the root cause is when the Assign To = request is missing/misconfigured.

NEW QUESTION # 11

In your integration flow process, the request reply returns a message with namespaces. What can you do to delete namespaces from this message? Note: There are 2 correct answers to this question.

- A. Set up the request reply to delete the namespaces
- B. Set up the namespace mapping in the Runtime Configuration.
- C. Use a Content Modifier
- D. Use an XSLT mapping

Answer: C,D

Explanation:

A Content Modifier is a step in an integration flow that allows you to modify the message header or body using expressions or constants. You can use a Content Modifier to delete namespaces from a message by using expressions that remove the namespace declarations or prefixes from the XML elements or attributes. For example, you can use the expression `replace($body,"xmlns:ns[0-9] += \"`
