

## Exams CAS-005 Torrent | CAS-005 Latest Exam Fee

DOWNLOAD the newest ITCertMagic CAS-005 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1ByTy07fxJ18hLnIH-33-ZIBQB6BbkjG5>

Solutions is one of the top platforms that has been helping CompTIA SecurityX Certification Exam exam candidates for many years. Over this long time period countless candidates have passed their dream CompTIA SecurityX Certification Exam (CAS-005) certification exam. They all got help from Exams. Solutions CAS-005 Practice Questions and easily passed their exam. The CompTIA CAS-005 exam questions are designed by experience and qualified CAS-005 certification expert.

We are glad to receive all your questions on our CAS-005 learning guide. If you have any questions about our CAS-005 study questions, you have the right to answer us in anytime. Our online workers will solve your problem immediately after receiving your questions. Because we hope that you can enjoy the best after-sales service. We believe that our CAS-005 Preparation exam will meet your all needs. Please give us a chance to service you; you will be satisfied with our CAS-005 study materials.

>> Exams CAS-005 Torrent <<

### CompTIA CAS-005 Latest Exam Fee & Latest CAS-005 Braindumps Pdf

First and foremost, our company has prepared CAS-005 free demo in this website for our customers. Second, it is convenient for you to read and make notes with our PDF version. Last but not least, we will provide considerate on line after sale service for you in twenty four hours a day, seven days a week. So let our CAS-005 practice materials to be your learning partner in the course of preparing for the exam, especially the PDF version is really a wise choice for you.

### CompTIA CAS-005 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• Security Operations: This domain is designed for CompTIA security architects and covers analyzing data to support monitoring and response activities, as well as assessing vulnerabilities and recommending solutions to reduce attack surfaces. Candidates will apply threat-hunting techniques and utilize threat intelligence concepts to enhance operational security.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• Governance, Risk, and Compliance: This section of the exam measures the skills of CompTIA security architects that cover the implementation of governance components based on organizational security requirements, including developing policies, procedures, and standards. Candidates will learn about managing security programs, including awareness training on phishing and social engineering.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Security Architecture: This domain focuses on analyzing requirements to design resilient systems, including the configuration of firewalls and intrusion detection systems.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Security Engineering: This section measures the skills of CompTIA security architects that involve troubleshooting common issues related to identity and access management (IAM) components within an enterprise environment. Candidates will analyze requirements to enhance endpoint and server security while implementing hardware security technologies. This domain also emphasizes the importance of advanced cryptographic concepts in securing systems.</li> </ul>

## CompTIA SecurityX Certification Exam Sample Questions (Q120-Q125):

### NEW QUESTION # 120

After remote desktop capabilities were deployed in the environment, various vulnerabilities were noticed.

- Exfiltration of intellectual property
- Unencrypted files
- Weak user passwords

Which of the following is the best way to mitigate these vulnerabilities? (Select two).

- A. Implementing data loss prevention
- B. Implementing a version control system
- C. Deploying directory-based group policies
- D. Deploying file integrity monitoring
- E. Restricting access to critical file services only
- F. Implementing a CMDB platform
- G. Enabling modern authentication that supports MFA

Answer: A,G

Explanation:

To mitigate the identified vulnerabilities, the following solutions are most appropriate:

Implementing data loss prevention (DLP): DLP solutions help prevent the unauthorized transfer of data outside the organization. This directly addresses the exfiltration of intellectual property by monitoring, detecting, and blocking sensitive data transfers.

Enabling modern authentication that supports Multi-Factor Authentication (MFA): This significantly enhances security by requiring additional verification methods beyond just passwords. It addresses the issue of weak user passwords by making it much harder for unauthorized users to gain access, even if they obtain the password.

### NEW QUESTION # 121

During a gap assessment, an organization notes that OYOD usage is a significant risk. The organization implemented administrative policies prohibiting BYOD usage. However, the organization has not implemented technical controls to prevent the unauthorized use of BYOD assets when accessing the organization's resources.

Which of the following solutions should the organization implement to reduce the risk of BYOD devices? (Select two).

- A. Cloud IAM to enforce the use of token based MFA
- B. PAM. to enforce local password policies
- C. SD-WAN. to enforce web content filtering through external proxies
- D. DLP, to enforce data protection capabilities
- E. NAC, to enforce device configuration requirements

- F. Conditional access, to enforce user-to-device binding

**Answer: E,F**

Explanation:

To reduce the risk of unauthorized BYOD (Bring Your Own Device) usage, the organization should implement Conditional Access and Network Access Control (NAC).

Why Conditional Access and NAC?

Conditional Access:

User-to-Device Binding: Conditional access policies can enforce that only registered and compliant devices are allowed to access corporate resources.

Context-Aware Security: Enforces access controls based on the context of the access attempt, such as user identity, device compliance, location, and more.

Network Access Control (NAC):

Device Configuration Requirements: NAC ensures that only devices meeting specific security configurations are allowed to connect to the network.

Access Control: Provides granular control over network access, ensuring that BYOD devices comply with security policies before gaining access.

Other options, while useful, do not address the specific need to control and secure BYOD devices effectively:

A: Cloud IAM to enforce token-based MFA: Enhances authentication security but does not control device compliance.

D: PAM to enforce local password policies: Focuses on privileged account management, not BYOD control.

E: SD-WAN to enforce web content filtering: Enhances network performance and security but does not enforce BYOD device compliance.

F: DLP to enforce data protection capabilities: Protects data but does not control BYOD device access and compliance.

## NEW QUESTION # 122

During an audit at an organization, auditors find that developers are able to promote code to production. The auditors request a full review of all production changes. Which of the following should the organization implement to prevent a full review in the future?

- A. Interactive application security testing
- B. Centralized code repositories
- C. Change control board
- D. Branch protection

**Answer: C**

## NEW QUESTION # 123

An endpoint security engineer finds that a newly acquired company has a variety of non-standard applications running and no defined ownership for those applications. The engineer needs to find a solution that restricts malicious programs and software from running in that environment, while allowing the non-standard applications to function without interruption. Which of the following application control configurations should the engineer apply?

- A. Allow list
- B. Audit mode
- C. MAC list
- D. Deny list

**Answer: B**

Explanation:

Comprehensive and Detailed Step-by-Step

Option A: Deny list

Deny lists block specific applications or processes identified as malicious.

This approach is reactive and may inadvertently block the non-standard applications that are currently in use without proper ownership.

Option B: Allow list

Allow lists permit only pre-approved applications to run.

While secure, this approach requires defining all non-standard applications, which may disrupt operations in an environment where ownership is unclear.

Option C: Audit mode

Correct Answer.

Audit mode allows monitoring and logging of applications without enforcing restrictions.

This is ideal in environments with non-standard applications and undefined ownership because it enables the engineer to observe the environment and gradually implement control without interruption.

Audit mode provides critical visibility into the software landscape, ensuring that necessary applications remain functional.

Option D: MAC list

Mandatory Access Control (MAC) lists restrict access based on classification and clearance levels.

This does not align with application control objectives in this context.

:

CompTIA CASP+ Study Guide - Chapters on Endpoint Security and Application Control.

CASP+ Objective 2.4: Implement appropriate security controls for enterprise endpoints.

### NEW QUESTION # 124

A compliance officer is facilitating a business impact analysis (BIA) and wants business unit leaders to collect meaningful data. Several business unit leaders want more information about the types of data the officer needs.

Which of the following data types would be the most beneficial for the compliance officer? (Select two)

- A. Costs associated with downtime
- B. Contingency plans
- C. Applicable contract obligations
- D. Inventory details
- E. Network diagrams
- F. Critical processes

**Answer: A,C,F**

Explanation:

Understanding Business Impact Analysis (BIA):

ABIA assesses the effects of disruptions to an organization's operations.

It helps prioritize resources based on the potential impact of downtime, compliance issues, and critical processes.

Why Options B, C, and F are Correct:

B (Applicable contract obligations) → Many companies have legal and compliance obligations regarding downtime, availability, and SLAs. This information helps determine what risk levels are acceptable.

C (Costs associated with downtime) → BIA quantifies the financial impact of system failures. Knowing lost revenue, regulatory fines, and recovery costs helps in planning.

F (Critical processes) → Identifying core business processes allows an organization to prioritize recovery efforts and maintain operational continuity.

Why Other Options Are Incorrect:

A (Inventory details) → While useful for asset management, it does not directly impact business continuity planning.

D (Network diagrams) → These help in security architecture but are not directly related to the financial/business impact analysis.

E (Contingency plans) → BIA is performed before contingency planning to identify what needs protection.
