BONUS!!! Download part of Prep4SureReview NSE7_EFW-7.2 dumps for free: <https://drive.google.com/open?id=1BuW3SeXkxHNdZQhsfAyyvLZNm5uj227K>

Our NSE7_EFW-7.2 preparation exam can provide all customers with the After-sales service guarantee. The After-sales service guarantee is mainly reflected in to many aspects. The most important one is that we can promise that our NSE7_EFW-7.2 study questions will meet the customer demand for privacy protection. As is known to us, the privacy protection of customer is very important, No one wants to breach patient. So our NSE7_EFW-7.2 Actual Exam pays high attention to protect the privacy of all customers.

Fortinet NSE7_EFW-7.2 Exam Syllabus Topics:

Topic	Details
Topic 1	Central management: The topic of Central management covers implementing central management.
Topic 2	Security profiles: Using FortiManager as a local FortiGuard server is discussed in this topic. Moreover, it delves into configuring web filtering, application control, and the intrusion prevention system (IPS) in an enterprise network.
Topic 3	Routing: It covers implementing OSPF to route enterprise traffic and Border Gateway Protocol (BGP) to route enterprise traffic.
Topic 4	VPN: Implementing IPsec VPN IKE version 2 is discussed in this topic. Additionally, it delves into implementing auto-discovery VPN (ADVPN) to enable on-demand VPN tunnels between sites.
Topic 5	System configuration: This topic discusses Fortinet Security Fabric and hardware acceleration. Furthermore, it delves into configuring various operation modes for an HA cluster.

Free PDF 2025 Fortinet NSE7_EFW-7.2: Newest Exams Fortinet NSE 7 - Enterprise Firewall 7.2 Torrent

Up to now, we have more than tens of thousands of customers around the world supporting our NSE7_EFW-7.2 training prep. So our NSE7_EFW-7.2 study materials are elemental materials you cannot miss. In your review duration, you can contact with our after-sales section if there are any problems with our NSE7_EFW-7.2 Practice Braindumps. They will help you 24/7 all the time. These services assure your avoid any loss.

Fortinet NSE 7 - Enterprise Firewall 7.2 Sample Questions (Q45-Q50):

NEW QUESTION # 45

Refer to the exhibit, which contains the partial ADVPN configuration of a spoke.

```
config vpn ipsec phase1-interface
edit "tunnel"
set interface "port1"
set ike-version 2
set keylife 28800
set peertype any
set net-device enable
set proposal aes128gcm-prfsha256 aes256gcm-prfsha384
set auto-discovery-receiver enable
set remote-gw 100.64.1.1
set psksecret fortinet
next
end
```

Which two parameters must you configure on the corresponding single hub? (Choose two.)

- A. Set auto-discovery-receiver enable
- B. Set ike-version 2
- C. Set auto-discovery-sender enable
- D. Set auto-discovery-forwarder enable

Answer: B,C

NEW QUESTION # 46

Refer to the exhibit.

```
config router prefix-list
edit filter-subnets
config rule
edit 1
set prefix 10.1.0.0/16
set action deny
next
edit 2
set prefix 10.0.0.0/8
set action permit
set ge 16
next
end
end
end
```

The exhibit shows a prefix list configuration

What can you conclude from the above prefix-list configuration?

- A. The prefix 10.0.0.0/8 will be permitted
- B. The prefix 10.10.0.0/16 will be denied
- C. The prefix 10.10.10.0/24 will be permitted
- D. The prefixes 10.10.0/16 and 10.0.0.0/16 will be denied

Answer: C

NEW QUESTION # 47

Refer to the exhibit, which shows an OSPF network.

Which types of link-state advertisements (LSA) will NGFW-1 send, if it is a backup designated router (BDR)?

- A. NGFW-1 will send type 1 and type 3 LSAs.
- B. ONGFW-1 will send type 1 and type 4 LSAs.
- C. ONGFW-1 will send type 1 and type 5 LSAs.
- D. ONGFW-1 will send type 1 and type 2 LSAs.

Answer: A

NEW QUESTION # 48

Refer to the exhibit, which shows two configured FortiGate devices and peering over FGSP.

The main link directly connects the two FortiGate devices and is configured using the set session-syn-dev <interface> command. What is the primary reason to configure the main link?

- A. To have only configuration synchronization in layer 3
- B. To load balance both sessions and configuration synchronization between layer 2 and 3
- C. To have both sessions and configuration synchronization in layer 2
- D. To have both sessions and configuration synchronization in layer 3

Answer: D

Explanation:

The primary purpose of configuring a main link between the devices is to synchronize session information so that if one unit fails, the other can continue processing traffic without dropping active sessions.

A: To have both sessions and configuration synchronization in layer 2. This is incorrect because FGSP is used for session synchronization, not configuration synchronization.

B: To load balance both sessions and configuration synchronization between layer 2 and 3. FGSP does not perform load balancing and is not used for configuration synchronization.

C: To have only configuration synchronization in layer 3. The main link is not used solely for configuration synchronization.

D: To have both sessions and configuration synchronization in layer 3. The main link in an FGSP setup is indeed used to synchronize session information across the devices, and it operates at layer 3 since it uses IP addresses to establish the peering.

NEW QUESTION # 49

Exhibit.

```
config vpn ipsec phase1-interface
  edit tunnel
    set type dynamic
    set interface "port1"
    set ike-version 2
    set keylife 28800
    set peertype any
    set net-device enable
    set encryption aes128-sha256 aes256-sha256
    set dpd on-idle
    set add-route enable
    set psksecret fortinet
  next
end
```

Refer to the exhibit, which contains a partial VPN configuration.

What can you conclude from this configuration?

- A. FortiGate creates separate virtual interfaces for each dial up client.
- B. The VPN should use the dynamic routing protocol to exchange routing information Through the tunnels.
- **C. The routing table shows a single IPSec virtual interface.**
- D. Dead peer detection is disabled.

Answer: C

Explanation:

The configuration line "set dpd on-idle" indicates that dead peer detection (DPD) is set to trigger only when the tunnel is idle, not actively disabled. References: FortiGate IPSec VPN User Guide - Fortinet Document Library From the given VPN configuration, dead peer detection (DPD) is set to 'on-idle', indicating that DPD is enabled and will be used to detect if the other end of the VPN tunnel is still alive when no traffic is detected.

Hence, option C is incorrect. The configuration shows the tunnel set to type 'dynamic', which does not create separate virtual interfaces for each dial-up client (A), and it is not specified that dynamic routing will be used (B). Since this is a phase 1 configuration snippet, the routing table aspect (D) cannot be concluded from this alone.

NEW QUESTION # 50

.....

It is apparent that a majority of people who are preparing for the NSE7_EFW-7.2 exam would unavoidably feel nervous as the exam approaching. If you are still worried about the coming exam, since you have clicked into this website, you can just take it easy now, I can assure you that our company will present the antidote for you--our NSE7_EFW-7.2 Learning Materials. And you will be grateful to choose our NSE7_EFW-7.2 study questions for its high-effective to bring you to success.
