SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing Sample Questions (Q29-Q34):

NEW QUESTION # 29

Your production planners are allowed to execute planning only for specific resources. How can you achieve this in Advanced Planning (PP/DS)?

- A. Use a resource group.
- B. Use a planning group.
- C. Use a planning area.
- D. Use a propagation range.

Answer: A

Explanation:

In SAP S/4HANA PP/DS, restricting planners to specific resources for planning is achieved through:

* Use a resource group(A): Resource groups (defined in /SAPAPO/RES_GROUP or Customizing) aggregate specific resources (e.g., work centers from CR02 flagged for PP/DS). Planners can be assigned to a resource group via authorization profiles (PFCG), limiting their planning scope in tools like the Planning Board (/SAPAPO/CDPS0) or Product View (/SAPAPO/RRP3) to only those resources, ensuring controlled access.

Use a planning group(B) isn't a standard PP/DS term-MRP groups exist in classic MRP, but not for resource restriction in PP/DS. Use a propagation range(C) (in /SAPAPO/CDPSC11) defines the scope of planning changes (e.g., horizon), not resource access. Use a planning area(D) (e.g., in APO) organizes data but doesn't restrict resource-specific planning-it's more for data segmentation. Resource groups align with SAP's PP/DS security model.

NEW QUESTION # 30

Which SAP applications can be used for forecasting in Supply Chain Planning? Note: There are 2 correct answers to this question.

- A. Material Requirements Planning (MRP)
- B. Capacity Requirements Planning (CRP)

- C. Integrated Business Planning (IBP)
- D. Supply Chain Management (SCM)

Answer: C,D

Explanation:

In SAP S/4HANA and its broader ecosystem, forecasting for supply chain planning is supported by advanced tools:

* Integrated Business Planning (IBP)(A): SAP IBP is a cloud-based solution designed for advanced supply chain planning, including demand forecasting. It uses statistical models, machine learning, and real-time data integration to predict demand, making it a primary tool for forecasting (e.g., SAP IBP for Demand).

* Supply Chain Management (SCM)(B): SAP SCM, particularly its Advanced Planning and Optimization (APO) module (e.g., Demand Planning - DP), provides robust forecasting capabilities using historical data and planning algorithms. While SAP is transitioning APO functionalities to IBP, SCM remains relevant in on-premise or hybrid setups.

Material Requirements Planning (MRP)(C) in S/4HANA focuses on material planning based on existing demand (e.g., PIRs or sales orders) and does not perform forecasting itself; it relies on inputs from Demand Management. Capacity Requirements Planning (CRP)(D) deals with capacity leveling and scheduling, not demand forecasting. These distinctions are clear in SAP's supply chain planning documentation.
