

Excellent Amazon SOA-C02 Exam Preview - SOA-C02 Free Download

What's more, part of that ExamsReviews SOA-C02 dumps now are free: <https://drive.google.com/open?id=1xAa16qfKpP4BScOKTF46u2VU35unrywQ>

One way to make yourself competitive is to pass the SOA-C02 certification exams. Hence, if you need help to get certified, you are in the right place. ExamsReviews offers the most comprehensive and updated braindumps for SOA-C02's certifications. To ensure that our products are of the highest quality, we have tapped the services of SOA-C02 experts to review and evaluate our SOA-C02 certification test materials. In fact, we continuously provide updates to every customer to ensure that our SOA-C02 products can cope with the fast changing trends in SOA-C02 certification programs.

Amazon SOA-C02 certification exam covers a wide range of topics, including deployment, management, and optimization of AWS services, as well as monitoring and troubleshooting of AWS systems. Candidates will also be tested on their knowledge of security, compliance, and automation techniques for AWS environments. SOA-C02 Exam consists of 65 multiple-choice and multiple-response questions and has a duration of 130 minutes.

Hot SOA-C02 Exam Preview Offers you Professional Actual Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Exam Products

We have 24/7 Service Online Support services, and provide professional staff Remote Assistance. Besides, if you need an invoice of our SOA-C02 practice materials please specify the invoice information and send us an email. Online customer service and mail Service is waiting for you all the time. And you can download the trial of our SOA-C02 training engine for free before your purchase. This kind of service shows our self-confidence and actual strength about SOA-C02 study materials in our company. And you will pass your SOA-C02 exam for sure with our best SOA-C02 study guide.

Amazon SOA-C02 or AWS Certified SysOps Administrator - Associate (SOA-C02) is a certification exam that validates the skills and expertise of professionals in deploying, managing, and operating scalable, highly available, and fault-tolerant systems on the AWS platform. SOA-C02 Exam is designed to test the knowledge of candidates in various domains, including deployment, management, operations, security, and troubleshooting of AWS services.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q210-Q215):

NEW QUESTION # 210

A company needs to view a list of security groups that are open to the internet on port 3389. What should a SysOps administrator do to meet this requirement?

- A. Configure a service control policy (SCP) to identify security groups that allow unrestricted access on port 3389.
- B. Use AWS Identity and Access Management Access Analyzer to find any instances that have unrestricted access on port

3389.

- C. Configure Amazon GuardDuty to scan security groups and report unrestricted access on port 3389.
- **D. Use AWS Trusted Advisor to find security groups that allow unrestricted access on port 3389**

Answer: D

NEW QUESTION # 211

A SysOps Administrator runs a web application that is using a microservices approach whereby different responsibilities of the application have been divided in a separate microservice running on a different Amazon EC2 instance. The administrator has been tasked with reconfiguring the infrastructure to support this approach.

How can the administrator accomplish this with the LEAST administrative overhead?

- A. Use Amazon CloudFront to log the URL and forward the request.
- B. Use Amazon CloudFront to rewrite the header based on the microservice and forward the request.
- **C. Use an Application Load Balancer (ALB) and do path-based routing.**
- D. Use a Network Load Balancer (NLB) and do path-based routing.

Answer: C

Explanation:

To reconfigure the infrastructure to support a microservices approach with the least administrative overhead, using an Application Load Balancer (ALB) with path-based routing is the most suitable solution.

* Application Load Balancer (ALB):

* ALBs are designed to distribute incoming application traffic across multiple targets, such as EC2 instances, in one or more Availability Zones.

* ALBs support path-based routing, which allows you to route requests to different microservices based on the URL path.

* Path-Based Routing:

* With path-based routing, you can configure your ALB to route requests to specific target groups based on the URL path.

* For example, requests to example.com/service1/* can be routed to one microservice, while requests to example.com/service2/* can be routed to another.

* Implementation Steps:

* Go to the EC2 console and navigate to "Load Balancers."

* Create an ALB and configure the listener.

* Define rules for path-based routing and create target groups for each microservice.

* Register the appropriate EC2 instances with each target group.

References:

* Application Load Balancers

* ALB Path-Based Routing

NEW QUESTION # 212

A SysOps administrator has used AWS CloudFormation to deploy a sereness application into a production VPC. The application consists of an AWS Lambda function, an Amazon DynamoDB table, and an Amazon API Gateway API. The SysOps administrator must delete the AWS CloudFormation stack without deleting the DynamoDB table.

Which action should the SysOps administrator take before deleting the AWS CloudFormation stack?

- **A. Add a Retain deletion policy to the DynamoDB resource in the AWS CloudFormation stack.**
- B. Update the application's IAM policy with a Deny statement for the dynamodb:DeleteTable action.
- C. Enable termination protection on the AWS CloudFormation stack.
- D. Add a Snapshot deletion policy to the DynamoDB resource In the AWS CloudFormation stack.

Answer: A

Explanation:

* Understand the Problem:

* The requirement is to delete the CloudFormation stack without deleting the DynamoDB table.

* Analyze the Requirements:

* Ensure the DynamoDB table is preserved when the CloudFormation stack is deleted.

* Evaluate the Options:

- * Option A: Add a Retain deletion policy to the DynamoDB resource.
- * The Retain policy ensures that the DynamoDB table is not deleted when the stack is deleted.
- * Option B: Add a Snapshot deletion policy to the DynamoDB resource.
- * Snapshot policy is not applicable to DynamoDB tables and would not retain the table itself.
- * Option C: Enable termination protection on the CloudFormation stack.
- * Prevents stack deletion entirely but does not specifically protect the DynamoDB table.
- * Option D: Update the IAM policy with a Deny statement for dynamodb:DeleteTable.
- * Prevents deletion of the table but is not a CloudFormation stack-specific solution.
- * Select the Best Solution:
- * Option A: Adding a Retain deletion policy to the DynamoDB resource in the CloudFormation stack ensures the table is preserved when the stack is deleted.

References:

- * AWS CloudFormation Deletion Policy

Using the Retain deletion policy ensures that the DynamoDB table is not deleted when the CloudFormation stack is deleted, preserving critical data.

NEW QUESTION # 213

A SysOps administrator needs to track the costs of data transfer between AWS Regions. The SysOps administrator must implement a solution to send alerts to an email distribution list when transfer costs reach 75% of a specific threshold. What should the SysOps administrator do to meet these requirements?

- **A. Use AWS Budgets to create a cost budget for data transfer costs. Set an alert at 75% of the budgeted amount. Configure the budget to send a notification to the email distribution list when costs reach 75% of the threshold.**
- B. Set up a VPC flow log. Set up a subscription filter to an AWS Lambda function to analyze data transfer. Configure the Lambda function to send a notification to the email distribution list when costs reach 75% of the threshold.
- C. Create an Amazon CloudWatch billing alarm to detect when costs reach 75% of the threshold. Configure the alarm to publish a message to an Amazon Simple Notification Service (Amazon SNS) topic. Subscribe the email distribution list to the topic.
- D. Create an AWS Cost and Usage Report. Analyze the results in Amazon Athena. Configure an alarm to publish a message to an Amazon Simple Notification Service (Amazon SNS) topic when costs reach 75% of the threshold. Subscribe the email distribution list to the topic.

Answer: A

Explanation:

Use AWS Budgets to create a cost budget for data transfer costs. Set an alert at 75% of the budgeted amount. Configure the budget to send a notification to the email distribution list when costs reach 75% of the threshold.

NEW QUESTION # 214

An application runs on Amazon EC2 instances that are in an Auto Scaling group. A SysOps administrator needs to implement a solution that provides a central storage location for errors that the application logs to disk. The solution must provide an alert when the application logs an error. What should the SysOps administrator do to meet these requirements?

- **A. Deploy and configure the Amazon CloudWatch agent on the EC2 instances to log to a CloudWatch log group. Create a metric filter on the target CloudWatch log group. Create a CloudWatch alarm that publishes to an Amazon Simple Notification Service (Amazon SNS) topic that has an email subscription.**
- B. Deploy an AWS Lambda function that pushes the errors directly to Amazon CloudWatch Logs. Configure the Lambda function to run every time the log file is updated on disk.
- C. Create an Auto Scaling lifecycle hook that invokes an EC2 based script to identify errors. Configure the script to push the error messages to an Amazon CloudWatch log group when the EC2 instances scale in. Create a CloudWatch alarm that publishes to an Amazon Simple Notification Service (Amazon SNS) topic that has an email subscription when the number of error messages exceeds a threshold.
- D. Create a cron job on the EC2 instances to identify errors and push the errors to an Amazon CloudWatch metric filter. Configure the filter to publish to an Amazon Simple Notification Service (Amazon SNS) topic that has an SMS subscription.

Answer: A
