

Excellent Analytics-Admn-201 Preparation Materials: Salesforce Certified Tableau Server Administrator donate you the best Exam Simulation - ActualVCE

Our products are designed by a lot of experts and professors in different area, our Analytics-Admn-201 exam questions can promise twenty to thirty hours for preparing for the exam. If you decide to buy our Analytics-Admn-201 test guide, which means you just need to spend twenty to thirty hours before you take your exam. By our Analytics-Admn-201 Exam Questions, you will spend less time on preparing for exam, which means you will have more spare time to do other thing. So do not hesitate and buy our Salesforce Certified Tableau Server Administrator guide torrent.

We know that Analytics-Admn-201 exam is very important for you working in the IT industry, so we developed the Analytics-Admn-201 test software that will bring you a great help. All exam materials you need are provided by our team, and we have carried out the scientific arrangement and analysis only to relieve your pressure and burden in preparation for Analytics-Admn-201 Exam.

Exam Analytics-Admn-201 Registration & Analytics-Admn-201 Dump

The language in our Analytics-Admn-201 test guide is easy to understand that will make any learner without any learning disabilities, whether you are a student or a in-service staff, whether you are a novice or an experienced staff who has abundant experience for many years. Our Analytics-Admn-201 Exam Questions are applicable for everyone in all walks of life which is not depends on your educated level. Therefore, it should be a great wonderful idea to choose our Analytics-Admn-201 guide torrent for sailing through the difficult test and pass it.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 2	<ul style="list-style-type: none">Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.

Topic 3	<ul style="list-style-type: none"> • Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 4	<ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 5	<ul style="list-style-type: none"> • Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

Salesforce Certified Tableau Server Administrator Sample Questions (Q19-Q24):

NEW QUESTION # 19

To which site role can you associate the Viewer user-based license level?

- A. Creator
- B. Explorer (can publish)
- C. Viewer
- D. Explorer

Answer: C

Explanation:

Tableau Server uses a role-based licensing model with three primary license levels: Creator, Explorer, and Viewer. Each license level corresponds to specific site roles that define what users can do on the server.

Viewer License: This is the most restrictive license, allowing users to view and interact with published content (e.g., dashboards and visualizations) but not to create or publish new content.

Site Role: The Viewer license can only be associated with the Viewer site role. This role restricts users to viewing capabilities, aligning with the license's purpose.

Option A (Creator): Incorrect. The Creator license is for users who can create, edit, and publish content using Tableau Desktop and the web interface. It corresponds to the Creator site role, not Viewer.

Option B (Explorer (can publish)): Incorrect. This is a variation of the Explorer license, which allows users to edit and publish content within limits. It's more permissive than Viewer.

Option C (Viewer): Correct. The Viewer site role matches the Viewer license level perfectly.

Option D (Explorer): Incorrect. The Explorer license allows users to explore data and create content in the web interface, exceeding the Viewer license's capabilities.

Reference: Tableau Server Documentation - "User Site Roles and Licenses" (https://help.tableau.com/current/server/en-us/license_usage.htm).

NEW QUESTION # 20

What file format should you use to register Tableau Server from the command line?

- A. JSON
- B. HTTP
- C. XML

- D. YML

Answer: A

Explanation:

Registering Tableau Server from the command line involves providing configuration details (e.g., identity store, license) via the tsm register command. Let's explore this fully.

* Registration Process:

* Run during initial setup or to update settings (e.g., after changing AD/LDAP config).

* Uses a configuration file to pass parameters to TSM.

* Command: tsm register --file <path-to-file>.

* File Format:

* Tableau Server uses JSON for configuration files in TSM commands like tsm register.

* Example:

```
json
```

```
CollapseWrapCopy
```

```
{
```

```
"identityStore": {
```

```
  "type": "local",
```

```
  "domain": "example.com"
```

```
}
```

```
}
```

* JSON is structured, machine-readable, and aligns with Tableau's modern CLI design.

* Option C (JSON): Correct.

* Official format for tsm register, per documentation and practical use.

* Option A (YML): Incorrect.

* While tabsvc.yml exists internally, it's not for registration-tsm register uses JSON.

* Option B (XML): Incorrect.

* Older Tableau configs used XML (e.g., workgroup.yml pre-TSM), but TSM standardized on JSON.

* Option D (HTTP): Incorrect.

* HTTP is a protocol, not a file format-irrelevant here.

Why This Matters: Correct file format ensures seamless registration, avoiding CLI errors in setup or migrations.

Reference: Tableau Server Documentation - "tsm register" (https://help.tableau.com/current/server/en-us/cli_register.htm).

NEW QUESTION # 21

You attempt to delete a user who owns content on a Tableau Server. What is the result of the delete action?

- A. The user is deleted, and the user's content is reassigned to the server administrator
- B. The user and all of the user's content is deleted
- **C. The user is switched to an Unlicensed site role and is NOT deleted**
- D. The user is deleted, and the user's content is reassigned to the project leader

Answer: C

Explanation:

Deleting a user in Tableau Server involves handling their owned content (workbooks, data sources)-let's analyze the process:

* Deletion Rules:

* Ownership Check: Tableau prevents deletion if the user owns content to avoid orphaning it.

* Action: Instead of deleting, the user's site role is set to Unlicensed, retaining their account and content ownership.

* Resolution: An admin must reassign ownership (e.g., via Users > Actions > Change Owner) before deletion.

* Option D (User switched to Unlicensed and NOT deleted): Correct.

* Details: Attempting deletion (e.g., Users > Select User > Actions > Delete) triggers a check. If content exists, the user becomes Unlicensed-still in the system but unable to log in.

* Why: Protects data integrity-content remains accessible for reassignment.

* Option A (Deleted, content to server admin): Incorrect.

* Why: No automatic reassignment to the server admin-manual action is required first.

* Option B (Deleted, content to project leader): Incorrect.

* Why: Project leaders don't automatically inherit content-no such mechanism exists.

* Option C (User and content deleted): Incorrect.

* Why: Tableau avoids deleting content with the user-too destructive without explicit intent.

Why This Matters: This safeguard prevents accidental data loss, ensuring admins manage ownership transitions deliberately.

Reference: Tableau Server Documentation - "Delete Users" (https://help.tableau.com/current/server/en-us/users_delete.htm).

NEW QUESTION # 22

What process enables you to access Tableau Services Manager (TSM) over HTTPS?

- A. Administration Agent
- B. License Manager
- C. Coordination Service
- D. Administration Controller

Answer: D

Explanation:

TSM is Tableau Server's management layer, accessible via CLI or web UI (port 8850). HTTPS secures this access-let's identify the responsible process:

* TSM Architecture:

* Administration Controller: Core TSM process, running on the initial node, handling configuration, UI, and CLI commands.

* HTTPS: Enabled by default on port 8850 with a self-signed certificate (configurable to custom certs).

* Option B (Administration Controller): Correct.

* Details: Hosts the TSM web UI (<https://<server>:8850>) and processes CLI requests. It manages the HTTPS listener, serving the interface securely.

* Why: It's the central hub for TSM operations, including secure access.

* Option A (License Manager): Incorrect.

* Why: Validates licenses, not responsible for HTTPS or UI access.

* Option C (Administration Agent): Incorrect.

* Why: Runs on additional nodes in multi-node setups to relay commands to the Controller-no direct HTTPS role.

* Option D (Coordination Service): Incorrect.

* Why: ZooKeeper manages cluster state, not TSM's web interface or HTTPS.

Why This Matters: Secure TSM access protects server administration-Administration Controller is the linchpin.

Reference: Tableau Server Documentation - "TSM Overview" (https://help.tableau.com/current/server/en-us/tsm_overview.htm).

NEW QUESTION # 23

When you use trusted tickets in Tableau Server, users can:

- A. Access embedded views without being prompted for credentials
- B. Save and edit workbooks
- C. Encrypt database connections
- D. Embed database credentials

Answer: A

Explanation:

Trusted Tickets is an authentication method in Tableau Server for embedding views in external applications (e.g., portals) without requiring users to log in manually. Here's how it works:

* A trusted application (e.g., a web server) authenticates with Tableau Server using a trusted IP or username/password.

* Tableau Server issues a temporary ticket (a unique string).

* The ticket is embedded in a view URL (e.g., `/trusted/<ticket>/views/...`), granting access to the view for a short period (configurable, default 5 minutes).

* Option A (Access embedded views without being prompted for credentials): Correct. Trusted tickets enable SSO-like behavior for embedded content, bypassing the login prompt if the ticket is valid. This is ideal for seamless integration into external systems.

* Option B (Encrypt database connections): Incorrect. Encryption is handled by data source configurations (e.g., SSL), not trusted tickets, which focus on user authentication.

* Option C (Save and edit workbooks): Incorrect. Trusted tickets grant view access, not edit permissions-those depend on the user's site role and permissions.

* Option D (Embed database credentials): Incorrect. Trusted tickets authenticate users to Tableau Server, not databases-database

credentials are managed separately in the data source.

Why This Matters: Trusted tickets simplify embedding Tableau content securely in custom applications, enhancing user experience.

Reference: Tableau Server Documentation - "Trusted Authentication" (https://help.tableau.com/current/server/en-us/trusted_auth.htm).

NEW QUESTION # 24

.....

As to this fateful exam that can help you or break you in some circumstances, our company made these Analytics-Admn-201 practice materials with accountability. We understand you can have more chances being accepted by other places and getting higher salary or acceptance. Our Analytics-Admn-201 training materials are made by our responsible company which means you can gain many other benefits as well. We offer free demos for your reference, and send you the new updates if our experts make them freely.
