

Exclusive ISTQB-CTFL Exam Questions And ISTQB-CTFL Dumps For The 2025 Exam

P.S. Free 2025 ISTQB ISTQB-CTFL dumps are available on Google Drive shared by Exams4sures:
https://drive.google.com/open?id=1_6KXyrb1QXXEiUXajOXMSsiUXU6O8j-p

You can choose one of version of our ISTQB-CTFL study guide as you like. There are three versions of our ISTQB-CTFL exam dumps. All of the content are the absolute same, just in different ways to use. Therefore, you do not worry about that you get false information of ISTQB-CTFL Guide materials. According to personal preference and budget choice, choosing the right goods to join the shopping cart. Then you can pay for it and download it right away.

Whether you are at home or out of home, you can study our ISTQB-CTFL test torrent. You don't have to worry about time since you have other things to do, because under the guidance of our ISTQB-CTFL study tool, you only need about 20 to 30 hours to prepare for the exam. Sincere and Thoughtful Service Our goal is to increase customer's satisfaction and always put customers in the first place. As for us, the customer is God. We provide you with 24-hour online service for our ISTQB-CTFL Study Tool. If you have any questions, please send us an e-mail. We will promptly provide feedback to you and we sincerely help you to solve the problem.

ISTQB-CTFL actual test & ISTQB-CTFL pass for sure & ISTQB-CTFL test guide

Our company is no exception, and you can be assured to buy our ISTQB-CTFL exam prep. Our company has been focusing on the protection of customer privacy all the time. We can make sure that we must protect the privacy of all customers who have bought our ISTQB-CTFL test questions. If you decide to use our ISTQB-CTFL test torrent, we are assured that we recognize the importance of protecting your privacy and safeguarding the confidentiality of the information you provide to us. We hope you will use our ISTQB-CTFL Exam Prep with a happy mood, and you don't need to worry about your information will be leaked out.

ISTQB-Foundation Level Exam Sample Questions (Q208-Q213):

NEW QUESTION # 208

Which ONE of the following options MOST ACCURATELY describes branch testing?

- A. In branch testing, the coverage items are branches, and the aim is to design test cases to exercise branches in the code until an acceptable level of coverage is achieved. Coverage is measured as the number of branches exercised by the test cases divided by the total number of branches expressed as a percentage.
- B. In branch testing, the coverage items are executable decisions. The aim is to design test cases that exercise statements in

the code until an acceptable level of coverage is achieved. Coverage is expressed as a percentage.

- C. In branch testing, the coverage items are control flow transfers between decisions, and the aim is to design test cases to exercise flow transfers in the code until an acceptable level of coverage is achieved. Coverage is measured as the number of branches exercised by the test cases divided by the total number of branches expressed as a percentage.
- D. In branch testing, the coverage items are executable statements. The aim is to design test cases that exercise statements in the code until an acceptable level of coverage is achieved, expressed as a percentage.

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation: Branch testing is a structural testing technique that ensures each branch (decision point) in the control flow is executed at least once. The goal is to measure branch coverage, which is the number of branches exercised divided by the total number of branches.

* (A) describes statement testing, not branch testing.

* (B) and (D) introduce confusion between decisions and statements, whereas branch testing focuses on control flow branches.

In simple terms, branch testing checks that all possible decision outcomes (true/false) are executed, whereas statement testing only ensures that each line of code is executed.

NEW QUESTION # 209

An Incident Management tool implements the following defect states; Open, Assigned, Solved, Closed Consider the following defect report:

Id T000561

Test Object 'Warehouse Management' application

Tester name; John Bishop

Date: 10th. April 2010

Test Case MRT558I

Status OPEN

Severity Serious

Priority

Problem- After inputting the Total Quantity item = 450 in the SV034 screen, the system shows an unexpected Error message=47

Correction:

Developer name:

Closing date:

Which of the following is a valid criticism of this report?

- **A. The version of the application is missing**
- B. The description is not highlighting the source of the problem
- C. The Priority, the Correction description and the Developer name are missing
- D. There is no link to the applicable requirement (traceability)

Answer: A

Explanation:

A valid criticism of this report is that the version of the application is missing. The version of the application is an important piece of information that should be included in a defect report, as it helps to identify which release or build of the software product contains the defect. The version of the application can also help to reproduce and debug the defect, as different versions may have different behaviors or features. The other options are not valid criticisms of this report. The priority, the correction description and the developer name are not missing, but rather not applicable for this report. The priority is a measure of how urgently a defect needs to be fixed, which can be assigned by the project manager or the defect tracking system, not by the tester who reports the defect. The correction description and the developer name are information that are added after the defect has been resolved, not when it has been reported. There is no link to the applicable requirement (traceability) is not a valid criticism of this report, because traceability is not a mandatory attribute of a defect report, but rather an optional one. Traceability is a relationship between two or more entities (such as requirements, test cases, defects, etc.) that shows how they are related or dependent on each other. Traceability can help to verify that the requirements are met by the test cases and defects, but it is not essential for reporting a defect. The description is not highlighting the source of the problem is not a valid criticism of this report, because highlighting the source of the problem is not a responsibility of the tester who reports the defect, but rather of the developer who fixes the defect. The description should provide enough information to describe what happened when the defect occurred, such as input values, expected results, actual results, error messages, screenshots, etc., but it does not need to explain why or how it happened. Verified Reference: A Study Guide to the ISTQB Foundation Level 2018 Syllabus - Springer, page 140.

NEW QUESTION # 210

Which ONE of the following activities TYPICALLY belongs to the planning phase of the review process?

- A. A separate defect report is created for each identified defect so that corrective actions can be tracked.
- B. Each reviewer conducts an individual review to identify anomalies, recommendations, and questions.
- **C. The purpose and scope of the review are defined, as well as the work product to be reviewed and the exit criteria.**
- D. The reviewers analyze and discuss the anomalies found during the review in a joint meeting.

Answer: C

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The planning phase of the review process (C) includes defining the review's purpose, scope, and exit criteria to ensure alignment.

Option A is part of the defect management phase, B happens during individual preparation, and D takes place in the review meeting.

NEW QUESTION # 211

Which of the following is NOT an objective of testing?

- A. Gaining confidence about the level of quality of the software
- **B. Analyzing and removing the cause of failures**
- C. Finding defects
- D. Providing information for decision-making

Answer: B

Explanation:

Analyzing and removing the cause of failures is not an objective of testing, but rather a task of development or maintenance. A failure is an event or behavior that deviates from the expected or specified result of a system under test. A failure is caused by an error (also known as a mistake or a fault) in the software code, design, or specification. Analyzing and removing the cause of failures is a process of locating and fixing errors in the software code, design, or specification, which is also known as debugging or defect resolution.

Analyzing and removing the cause of failures does not aim to find or report defects, but rather to correct or prevent them. The other options are objectives of testing. Finding defects is one of the main objectives of testing, as it helps to improve the quality and reliability of the software product. Providing information for decision-making is another objective of testing, as it helps to support decision making and risk management.

Gaining confidence about the level of quality of the software is another objective of testing, as it helps to assure that the software product meets its requirements and customer or user needs and expectations. NEW QUESTION # 212

Which of the following BEST describes exploratory testing?

- **A. Exploratory testing may be used within defined time periods, during which the tester may follow a test charter as a guide**
- B. Exploratory testing is a valid and useful black-box test technique since it focuses on test cases related to the architecture and design of a system
- C. Exploratory testing is a suitable test technique which may replace both black-box and white-box test techniques
- D. Exploratory testing requires both solid specifications and much project time available for test execution

Answer: A

Explanation:

Exploratory testing involves simultaneous test design and execution and is guided by a test charter, which outlines what needs to be tested, how it should be tested, and what to look for. This technique is typically conducted within predefined time periods, known as time-boxing, which allows testers to explore a system, understand its functionalities, and identify potential issues without detailed documentation or prior test case planning. The key aspects of exploratory testing include flexibility, adaptability, and the ability to respond to system behavior during testing.
