Tableau TDA-C01 (Tableau Certified Data Analyst) Certification Exam is a globally recognized certification that demonstrates one's ability to analyze and visualize data using Tableau software. Tableau Certified Data Analyst certification is designed for data analysts who want to enhance their skills in data analysis, data visualization, and data storytelling. The TDA-C01 Exam is administered by Tableau and is intended to validate the candidate's proficiency in using Tableau Desktop and Tableau Prep Builder to connect, clean, analyze, and visualize data.

Tableau Certified Data Analyst Sample Questions (Q73-Q78):

NEW QUESTION # 73

Refer to the exhibit.

You have the following chart.

You need the top 10 values to appear in a different color. The top 10 values must be colored dynamically. What should you do?

- A. Create a set that has a top 10 condition, and then drag the set to Color on the Marks card.
- B. Select the top 10 bars, and then change the color by selecting Color on the Marks card.
- C. Select the top 10 bars, create a set, and then drag the set to Color on the Marks card.
- D. Create a group field that groups the top 10 values into one group and the rest of the values into another group. Drag the group field to Color on the Marks card.

Answer: A

NEW QUESTION # 74

You have a dataset that contains daily sales by business segment from 2017 to the present. You want to use monthly historical trends to predict sales by segment in the future. Which three actions should you perform in order?

(Place the three correct options in order. Use the arrows to move Options to Answer Area. In Answer Area, arrows to re-order the options.)

The screenshot shows a quiz interface with two main sections: 'Options' and 'Answer Area'. The 'Options' section contains five items: 'From the Analytics pane, drag **Trend Line** to the worksheet.', 'Add the date to the Columns shelf. Add the segment and the sales to the Rows shelf.', 'Aggregate the date to month and year.', 'From the Analytics pane, drag **Forecast** to the worksheet.', and 'Create a calculated field that uses the `MODEL_QUANTILE` function.' The 'Answer Area' is currently empty. Navigation arrows are visible on the right side of the interface.

Answer:

Explanation:

Answer Area

The screenshot shows the 'Answer Area' with three options listed in order from top to bottom: 'Aggregate the date to month and year', 'Create a calculated field that uses the `MODEL_QUANTILE` function.', and 'Add the date to the Columns shelf Add the segment and the sales to the Rows shelf'.

- 1 - Aggregate the date to month and year
- 2 - Create a calculated field that uses the `MODEL_QUANTILE` function.
- 3 - Add the date to the Columns shelf Add the segment and the sales to the Rows shelf

NEW QUESTION # 75

You have two data sources that use the same schema. One data source contains order data from 2019 and the other data source contains order data from 2020.

You have a worksheet that shows the orders from 2019.

You need to configure the worksheet to show the orders from 2020 without reloading the data.

Which option should you select?

Answer Area

Answer:

Explanation:

Answer Area

NEW QUESTION # 76

You have the following chart that shows the cumulative of sales from various dates.

You want the months to appear as shown in the following chart.

What should you do?

- A. Convert the date to Continuous
- B. Convert the date to Attribute
- C. Select Show Missing Values for the date
- D. Convert the date to Exact Date

Answer: D

Explanation:

To make the months appear as shown in the second chart, you need to convert the date to Continuous. A continuous date is a green pill that shows a range of values on an axis. A discrete date is a blue pill that shows individual values as headers. In this case, you want to show a continuous range of months on the x-axis, instead of discrete headers.

To convert the date to Continuous, you need to do the following steps:

Right-click on the date field on the Columns shelf and select Convert to Continuous from the menu. This will change the date pill from blue to green and show a continuous range of dates on the x-axis.

Right-click on the date field again and select Month (January 2017) from the menu. This will change the level of detail of the date to month and year, instead of day.

Optionally, you can format the date axis by right-clicking on it and selecting Format from the menu. You can change the scale, tick marks, labels, and other options.

The other options are not correct for this scenario. Converting the date to Exact Date will show every single date as a header, which will be too crowded and unreadable. Selecting Show Missing Values for the date will fill in any gaps in the data with null values, but it will not change how the months appear. Converting the date to Attribute will return only one value for each partition of data, which will not show any variation over time. NEW QUESTION # 77

You have a line chart on a worksheet.

You want to add a comment to March 2020 as shown in the following visualization.

What should you do?

- A. Add a tooltip
- B. Drag the growth rate to Text on the Marks card
- C. Annotate March 2020
- D. Enable captions

Answer: A
