An administrator is required to maintain a software vulnerability on the endpoints, without showing the feature on the FortiClient. What must the administrator do to achieve this requirement?

- A. Select the vulnerability scan feature in the deployment package, but disable the feature on the endpoint profile
- B. Click the hide icon on the vulnerability scan profile assigned to endpoint
- C. Disable select the vulnerability scan feature in the deployment package
- D. Use the default endpoint profile

**Answer: B**

Explanation:

Evaluating Options:

Disabling the feature in the deployment package or endpoint profile would remove the functionality entirely, which is not desired.

Using the default endpoint profile may not meet the specific requirement of hiding the feature.

Clicking the hide icon on the vulnerability scan profile assigned to the endpoint will keep the feature active but hidden from the user's view.

The correct action is to click the hide icon on the vulnerability scan profile assigned to the endpoint (C).
