BTW, DOWNLOAD part of TestPassed MB-820 dumps from Cloud Storage: https://drive.google.com/open?id=12u54QWBvyhn7JWMO_u9NZBjKod-0e7QV

If you want to prepare for your exam in a paper version, our MB-820 test materials can do that for you. MB-820 PDF version is printable and you can print them into hard one, and take some notes on them. In addition, we offer you free demo to have a try, so that you can have a better understanding of what you are going to buy. We are pass guarantee and money back guarantee for MB-820 Exam Dumps, if you fail to pass the exam, we will give you full refund. Online and offline chat service are available, if you have any questions about MB-820 exam materials, you can have a conversation with us, and we will give you reply soon as possible.

Microsoft MB-820 Exam Syllabus Topics:

Topic	Details
Topic 1	Install, develop, and deploy for Business Central: It delves into the installation and configuration of a Business Central development environment. Moreover, it discusses creating, debugging, and deploying an extension in Business Central.
Topic 2	Develop by using AL objects: Building and extending tables and reports is discussed in this topic. It also explains Designing and creating an XMLport. Lastly, it discusses how to work with entitlement and permission set objects.
Topic 3	Integrate Business Central with other applications: Accessing Representational State Transfer (REST) services is discussed in this topic. It also explains implementation of APIs.

Quiz 2025 MB-820: High-quality Microsoft Dynamics 365 Business Central Developer Updated CBT

To improve our products' quality we employ first-tier experts and professional staff and to ensure that all the clients can pass the test we devote a lot of efforts to compile the MB-820 learning guide. Even if you unfortunately fail in the test we won't let you suffer the loss of the money and energy and we will return your money back at the first moment. After you pass the MB-820 test you will enjoy the benefits the certificate brings to you such as you will be promoted by your boss in a short time and your wage will surpass your colleagues. In short, buying the MB-820 exam guide deserves your money and energy spent on them.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q110-Q115):

NEW QUESTION # 110

You create a table with fields.

You observe errors in the code

You need to resolve the errors.

```
01 field(1; "Job No."; Code[20])
02 {
03     Caption = 'Job No.';
04 }
05 field(2; Description; text[150])
06 {
07     Caption = 'Description';
08 }
09 field(3; "Sales Amount"; Decimal)
10 {
11     AutoFormatType = 1;
12     CalcFormula = sum("Job Task"."Recognized Sales Amount" where("Job No." = field("No.")));
13     Caption = 'Calc. Recog. Sales Amount';
14     Editable = false;
15 }
16 field(5; "Over Budget"; Boolean)
17 {
18     Caption = 'Over Budget';
19 }
20 field(6; "Project Manager"; Code[50])
21 {
22     Caption = 'Project Manager';
23     TableRelation = "User Setup";
24 }
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Error resolution

Statement

Yes

No

In line 12, declare "Job Task" as a variable.

☐

☐

Add the property FieldClass = FlowField; for field 3.

☐

☐

Add the property FieldClass = FlowFilter; for field 3.

☐

☐

In line 23, assign the "User Setup" table to a field.

☐

☐

Answer:

Explanation:

Error resolution

Statement

Yes

No

In line 12, declare "Job Task" as a variable.

☐

☐

Add the property FieldClass = FlowField; for field 3.

☒

☐

Add the property FieldClass = FlowFilter; for field 3.

☐

☒

In line 23, assign the "User Setup" table to a field.

☒

☐

Explanation:

* In line 12, declare "Job Task" as a variable. = NO

* Add the property FieldClass = FlowField; for field 3. = YES

* Add the property FieldClass = FlowFilter; for field 3. = NO

* In line 23, assign the "User Setup" table to a field. = YES

For "In line 12, declare 'Job Task' as a variable": In the AL code provided, the "Job Task" appears to be part of a CalcFormula of a FlowField, which means it references a table and not a variable. The "Job Task" does not need to be declared as a variable because it is used to reference a table in a CalcFormula expression.

For "Add the property FieldClass = FlowField; for field 3": The line of code CalcFormula = sum("Job Task"."Recognized Sales Amount" where("Job No." = field("No."))); indicates that this field is calculated from other table data, which is the definition of a FlowField. Therefore, adding the property FieldClass = FlowField; is necessary for the field to function correctly.

For "Add the property FieldClass = FlowFilter; for field 3": FlowFilters are used to filter data based on the value in a flow field. Since field 3 is using a CalcFormula to sum values, it is a FlowField and not a FlowFilter. Therefore, this statement is not correct. For "In line 23, assign the 'User Setup' table to a field": The line TableRelation = "User Setup"; suggests that the "Project Manager" field has a relation to the "User Setup" table, which is a method of assigning a table to a field to ensure that the values in "Project Manager" correspond to values in the "User Setup" table. Hence, this statement is true.

NEW QUESTION # 111

A company has the following custom permission set:

```
permissionset 50000 "Sales Person Permission Set"
{
    Assignable = false;
    Caption = 'Sales Person Permission Set';
    Microsoft
    tabledata Customer = RIMD,
    tabledata "Payment Terms" = RMD,
    tabledata Currency = RM,
    tabledata "Sales Header" = RIM,
    tabledata "Sales Line" = RIMD;
}
```

You need to make the permission set visible on the Permission Sets page.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Answer:

Explanation:

Explanation:

To make the permission set visible on the Permission Sets page, perform the following actions in sequence:

- * Change the Assignable property value to true.
- * Add the ObsoleteState = No property.
- * Publish the app with the permission set to an environment.

Process for making permission sets visible: In Business Central, the Assignable property determines whether a permission set is shown in the user interface for assigning to users. By default, if Assignable is set to false, the permission set is hidden. Therefore, it should be set to true to make the permission set visible.

The ObsoleteState property indicates whether an object is outdated (Obsolete) or not (No). If an object is marked as obsolete, it is typically hidden from the user interface. Therefore, setting ObsoleteState = No ensures that the permission set is not treated as outdated and remains visible.

Finally, publishing the app with the permission set to an environment updates the environment with the new or modified objects, including permission sets, making them available for assignment to users.

NEW QUESTION # 112

A company uses Azure Application Insights for Business Central online in its production environment.

A user observes that some job queues go into the failed state and require manual intervention.

You need to analyze job queue lifecycle telemetry.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```
traces
| take 100
| where customDimensions.eventId == 'YOUREVENTID'
| project timestamp
| take
| top
| project
| extend
, jobQueueObjectId = customDimensions.alJobQueueObjectId
, jobQueueObjectType = customDimensions.alJobQueueObjectType
, jobQueueExecutionNumberOfAttemptsToRun
customDimensions.alJobQueueNumberOfAttemptsToRun
```

Answer:

Explanation:

```
traces
| take 100
| where customDimensions.eventId == 'YOUREVENTID'
| project timestamp
| take
| top
| project
| extend
, jobQueueObjectId = customDimensions.alJobQueueObjectId
, jobQueueObjectType = customDimensions.alJobQueueObjectType
, jobQueueExecutionNumberOfAttemptsToRun
customDimensions.alJobQueueNumberOfAttemptsToRun
```

Explanation:

```
traces
| take 100
| where customDimensions.eventId == 'YOUREVENTID'
| project timestamp
, jobQueueObjectId = customDimensions.alJobQueueObjectId
, jobQueueObjectType = customDimensions.alJobQueueObjectType
, jobQueueExecutionNumberOfAttemptsToRun
customDimensions.alJobQueueNumberOfAttemptsToRun
```

KQL Code Segment:

* First command (traces):

* The query begins with traces to analyze telemetry data logs. The next command determines how the results are filtered or displayed.

- * take 100: This is the correct option to retrieve the top 100 rows from the traces table.
- * Command for selecting fields:
- * project: This command is used to select specific fields from the telemetry data, allowing you to retrieve and display only the fields relevant to the job queue telemetry.
- * The correct answer is project, as it allows you to choose fields like jobQueueObjectId, jobQueueObjectType, etc., from the customDimensions table.

NEW QUESTION # 113

You need to define the properties for the Receipt No. field in the Non-conformity table when storing the information to the purchasing department. How should you complete the code segment? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 114

You have a decimal variable named AmountLCY.
You need to round up the variable to four decimal places.
Which result value should you use?

- A. Result := Round(AmountLCY, 0.0001, '>');
- B. Result := Round(AmountLCY, 0.0001, '<');
- C. Result := Round(AmountLCY, 0.0001, '<=');
- D. Result := Round(AmountLCY, 0.0001, '=');

Answer: D

Explanation:

To round up a decimal variable to four decimal places in Microsoft Dynamics 365 Business Central, you should use the Round function with specific parameters. The correct formula is $\text{Result} := \text{Round}(\text{AmountLCY}, 0.0001, '=\text{'})$ (B). This function rounds the AmountLCY variable to the nearest value based on the second parameter, which is 0.0001 in this case, representing four decimal places. The third parameter, '=', specifies that the function should round to the nearest value, which effectively rounds up the value when it's halfway between two possible rounded values. This approach ensures that the AmountLCY variable is accurately rounded to four decimal places, which is essential for financial calculations and reporting to maintain precision.

NEW QUESTION # 115

.....

We have considered that your time may be very tight, and you can only use some fragmented time to learn. Therefore, it is really important to be able to read our MB-820 study materials anytime, anywhere. So we have developed our MB-820 exam questions to three different versions: the PDF, Software and APP online. They have covered all conditions that you will be in to study on our MB-820 learning guide. For example, the time you want to study on phone, computer, laptop, paper and so on.
