BCI CBCI Exam Syllabus Topics:

Topic	Details
Topic 1	• Validation: This final module emphasizes testing and verifying the effectiveness of implemented plans through exercises and reviews—ensuring that what was designed and implemented actually performs as intended under real-world conditions.
Topic 2	• Design: Here, learners explore how to translate analysis into strategic plans by developing continuity designs that mitigate identified risks, ensuring critical operations remain functional or can be quickly restored during disruptions.
Topic 3	• Introduction: This section lays the groundwork for newcomers to business continuity by clarifying what business continuity is, why it matters in organizational resilience, and how its fundamental practices interconnect under the Good Practice Guidelines (GPG) framework.
Topic 4	• Implementation: This section covers putting the designed continuity strategies into action, including creating and deploying incident response and business continuity plans, structuring effective response teams, and ensuring operational readiness.

BCI Certificate of the Business Continuity Institute (CBCI) Sample Questions (Q166-Q171):

NEW QUESTION # 166

Which method of measuring culture requires periodic checks to determine the percentage of the organization's personnel currently covered by existing Business Continuity culture initiatives?

- A. Culture index
- **B. Business Continuity awareness**
- C. Unstructured observation
- D. Behavioural consistency

Answer: B

Explanation:

The CBCI 7.0 course identifies Business Continuity awareness measurement as a method involving regular assessments of personnel engagement levels with Business Continuity culture initiatives. Periodic checks gauge how many employees have been reached by awareness programs, training, and communications. This quantitative approach provides tangible data on the penetration of continuity culture across the organization, informing areas needing focus or improvement. Unlike unstructured observations or broader culture indices, awareness measurement specifically targets the spread and effectiveness of Business Continuity messaging and understanding.

NEW QUESTION # 167

The three main steps involved in the risk assessment process are listing risk sources, performing a risk source analysis and:

- A. Assessing the consequences of risks
- **B. Evaluating risks**
- C. Categorising risks
- D. Identifying historical risks

Answer: B

Explanation:

CBCI 7.0 aligns its risk assessment language to ISO/BCI terminology. BCI guidance defines risk assessment as an overall process of risk identification, risk analysis, and risk evaluation. In the wording of your question, "listing risk sources" maps to risk identification, and "performing a risk source analysis" maps to risk analysis (examining likelihood and consequences to understand risk level). The third step, therefore, is risk evaluation-comparing analysed risks against agreed criteria (risk appetite/tolerance) to decide whether further action is needed and to prioritise treatment.

Option C (assessing consequences) is part of risk analysis, not the final step. Options A and B can be helpful techniques, but they are not the standard third step in the three-step risk assessment model used in BC/ISO-aligned frameworks. Therefore, the correct answer is D: Evaluating risks.

NEW QUESTION # 168

Which of the following is NOT a critical requirement for an effective response structure?

- A. The number and type of teams required by the organization
- B. A plan to exercise the escalation and response
- C. A plan to communicate with internal and external interested parties
- **D. Guidance on when regulators should be notified and be included in the response**

Answer: D

Explanation:

While communication plans, team structure, and exercising escalation and response are essential for an effective Business Continuity response structure, specific guidance on regulator notification, although important, is not typically considered a core structural element. The CBCI 7.0 course outlines that regulatory communications are usually integrated within communication plans but are not a standalone requirement for response structures. The focus remains on establishing clear roles, responsibilities, and communication mechanisms.

NEW QUESTION # 169

Which of the following is a step that would be taken by the Business Continuity professional to support the process to advance an organization from embedding to embracing Business Continuity?

- A. Assigning Business Continuity roles and responsibilities across the organization's hierarchy
- **B. Gaining an understanding of the organization's culture**
- C. Including funding in the Business Continuity budget to hire a consulting firm to run Business Continuity as a project
- D. Development and adoption of a Business Continuity policy to protect the organization from disruptions

Answer: B

Explanation:

The CBCI 7.0 course identifies gaining an understanding of the organization's culture as a foundational step in moving from merely embedding Business Continuity practices to fully embracing them. Cultural insights enable targeted interventions that align Business Continuity with existing values, beliefs, and behaviours, enhancing engagement and ownership. Policies and role assignments are important but less effective without cultural alignment. Outsourcing continuity as a project risks detachment from organizational realities. Understanding culture guides effective communication, training, and leadership strategies that foster a pervasive continuity mindset.

NEW QUESTION # 170

Which of the following is an action that the Business Continuity professional will take as part of the process of strategy determination?

- **A. Work with the relevant product, services, activity, or process owner to develop a specification for an appropriate solution**
- B. Develop a mandatory training schedule to ensure that all personnel are required to address any skills gaps relevant to the delivery of priority products, services, activities, and processes
- C. Design a strategy for agreement with top management that can then be delegated to the relevant owners of priority products, services, activities, and processes
- D. Prepare a communications brief to advise all external stakeholders of the outcome of the gap analysis and the plan for acting on the findings

Answer: A

Explanation:

Strategy determination is a collaborative process where the Business Continuity professional works directly with owners of priority products, services, activities, or processes to develop detailed specifications for solutions that meet continuity requirements. The CBCI 7.0 course highlights this partnership as essential to ensure strategies are practical, aligned with operational realities, and capable of achieving recovery objectives.

While designing high-level strategies and managing communication are important, hands-on collaboration with operational owners facilitates realistic, implementable solutions. This approach increases ownership, ensures accuracy, and fosters smoother implementation.
