Mule-Arch-201 New Study Guide, Mule-Arch-201 Examcollection

The earlier you get Mule-Arch-201 exam certification, the more helpful for you to have better development in IT industry. Maybe you have heard that the important Mule-Arch-201 exam will take more time or training fee, because you haven't use our Mule-Arch-201 exam software provided by our ExamDumpsVCE. The complex collection and analysis of Mule-Arch-201 Exam Materials have been finished by our professional team for you. You just need to effectively review and pass Mule-Arch-201 exam successfully.

For the office workers, they are both busy in their job and their family life; for the students, they possibly have to learn or do other things. Our Mule-Arch-201 exam questions are aimed to help them who don't have enough time to prepare their exam to save their time and energy, and they can spare time to do other things when they prepare the exam. You only need 20-30 hours to practice our software materials and then you can attend the exam. It costs you little time and energy. The Mule-Arch-201 Exam Questions are easy to be mastered and simplified the content of important information. The Salesforce Certified MuleSoft Platform Architect test guide conveys more important information with amount of answers and questions, thus the learning for the examinee is easy and highly efficient.

Salesforce Certified MuleSoft Platform Architect dumps torrent & valid free Mule-Arch-201 vce dumps

Based on high-quality products, our Mule-Arch-201 guide torrent has high quality to guarantee your test pass rate, which can achieve 98% to 100%. Mule-Arch-201 study tool is updated online by our experienced experts, and then sent to the user. And we

provide free updates of Mule-Arch-201 training material for one year after your payment. The data of our Mule-Arch-201 Exam Torrent is forward-looking and can grasp hot topics to help users master the latest knowledge. And you can also free download the demo of Mule-Arch-201 exam questions to have a check.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q136-Q141):

NEW QUESTION # 136
Refer to the exhibit.
Three business processes need to be implemented, and the implementations need to communicate with several different SaaS applications.
These processes are owned by separate (siloed) LOBs and are mainly independent of each other, but do share a few business entities. Each LOB has one development team and their own budget In this organizational context, what is the most effective approach to choose the API data models for the APIs that will implement these business processes with minimal redundancy of the data models?
A) Build several Bounded Context Data Models that align with coherent parts of the business processes and the definitions of associated business entities
B) Build distinct data models for each API to follow established micro-services and Agile API-centric practices C) Build all API data models using XML schema to drive consistency and reuse across the organization D) Build one centralized Canonical Data Model (Enterprise Data Model) that unifies all the data types from all three business processes, ensuring the data model is consistent and non-redundant

- A. Option D
- B. Option B
- C. Option A
- D. Option C

Answer: C

Explanation:
Correct Answe r: Build several Bounded Context Data Models that align with coherent parts of the business processes and the definitions of associated business entities.
****
>> The options w.r.t building API data models using XML schema/ Agile API-centric practices are irrelevant to the scenario given in the question. So these two are INVALID.
>> Building EDM (Enterprise Data Model) is not feasible or right fit for this scenario as the teams and LOBs work in silo and they all have different initiatives, budget etc.. Building EDM needs intensive coordination among all the team which evidently seems not possible in this scenario.
So, the right fit for this scenario is to build several Bounded Context Data Models that align with coherent parts of the business processes and the definitions of associated business entities.

NEW QUESTION # 137
A System API is designed to retrieve data from a backend system that has scalability challenges. What API policy can best safeguard the backend system?

- A. SLA-based rate limiting
- B. Auth 2 token enforcement
- C. Client ID enforcement
- D. IP whitelist

Answer: A

Explanation:
Correct Answe r: SLA-based rate limiting
****
>> Client Id enforement policy is a "Compliance" related NFR and does not help in maintaining the "Quality of Service (QoS)". It CANNOT and NOT meant for protecting the backend systems from scalability challenges.
>> IP Whitelisting and OAuth 2.0 token enforcement are "Security" related NFRs and again does not help in maintaining the "Quality of Service (QoS)". They CANNOT and are NOT meant for protecting the backend systems from scalability challenges.

Rate Limiting, Rate Limiting-SLA, Throttling, Spike Control are the policies that are "Quality of Service (QOS)" related NFRs and are meant to help in protecting the backend systems from getting overloaded.

NEW QUESTION # 138
A code-centric API documentation environment should allow API consumers to investigate and execute API client source code that demonstrates invoking one or more APIs as part of representative scenarios.
What is the most effective way to provide this type of code-centric API documentation environment using Anypoint Platform?

- A. Make relevant APIs discoverable via an Anypoint Exchange entry
- B. Create API Notebooks and include them in the relevant Anypoint Exchange entries
- C. Ensure the APIs are well documented through their Anypoint Exchange entries and API Consoles and share these pages with all API consumers
- D. Enable mocking services for each of the relevant APIs and expose them via their Anypoint Exchange entry

Answer: B

Explanation:
Correct Answe r: Create API Notebooks and Include them in the relevant Anypoint exchange entries
****
>> API Notebooks are the one on Anypoint Platform that enable us to provide code-centric API documentation Reference:
Bottom of Form
Top of Form

NEW QUESTION # 139
Mule applications that implement a number of REST APIs are deployed to their own subnet that is inaccessible from outside the organization.
External business-partners need to access these APIs, which are only allowed to be invoked from a separate subnet dedicated to partners - called Partner-subnet. This subnet is accessible from the public internet, which allows these external partners to reach it.
Anypoint Platform and Mule runtimes are already deployed in Partner-subnet. These Mule runtimes can already access the APIs.
What is the most resource-efficient solution to comply with these requirements, while having the least impact on other applications that are currently using the APIs?

- A. Add an additional endpoint to each API for partner-enablement consumption
- B. Duplicate the APIs as Mule applications, then deploy them to the Mule runtimes
- C. Implement (or generate) an API proxy Mule application for each of the APIs, then deploy the API proxies to the Mule runtimes
- D. Redeploy the API implementations to the same servers running the Mule runtimes

Answer: C

NEW QUESTION # 140
What is true about automating interactions with Anypoint Platform using tools such as Anypoint Platform REST APIs, Anypoint CU, or the Mule Maven plugin?

- A. Anypoint Platform APIs can ONLY automate interactions with CloudHub, while the Mule Maven plugin is required for deployment to customer-hosted Mule runtimes
- B. By default, the Anypoint CLI and Mule Maven plugin are NOT included in the Mule runtime, so are NOT available to be used by deployed Mule applications
- C. Access to Anypoint Platform APIs and Anypoint CU can be controlled separately through the roles and permissions in Anypoint Platform, so that specific users can get access to Anypoint CLI white others get access to the platform APIs
- D. API policies can be applied to the Anypoint Platform APIs so that ONLY certain LOBs have access to specific functions

Answer: B

Explanation:
Correct Answe r: By default, the Anypoint CLI and Mule Maven plugin are NOT included in the Mule runtime, so are NOT available to be used by deployed Mule applications

****

>> We CANNOT apply API policies to the Anypoint Platform APIs like we can do on our custom written API instances. So, option suggesting this is FALSE.

>> Anypoint Platform APIs can be used for automating interactions with both CloudHub and customer-hosted Mule runtimes. Not JUST the CloudHub. So, option opposing this is FALSE.

>> Mule Maven plugin is NOT mandatory for deployment to customer-hosted Mule runtimes. It just helps your CI/CD to have smoother automation. But not a compulsory requirement to deploy. So, option opposing this is FALSE.

>> We DO NOT have any such special roles and permissions on the platform to separately control access for some users to have Anypoint CLI and others to have Anypoint Platform APIs. With proper general roles/permissions (API Owner, Cloudhub Admin etc..), one can use any of the options (Anypoint CLI or Platform APIs). So, option suggesting this is FALSE.

Only TRUE statement given in the choices is that - Anypoint CLI and Mule Maven plugin are NOT included in the Mule runtime, so are NOT available to be used by deployed Mule applications.

Maven is part of Studio or you can use other Maven installation for development.

CLI is convenience only. It is one of many ways how to install app to the runtime.

These are definitely NOT part of anything except your process of deployment or automation.

NEW QUESTION # 141

......

You final purpose is to get the Mule-Arch-201 certificate. So it is important to choose good study materials. In fact, our aim is the same with you. Our Mule-Arch-201 study materials have strong strengths to help you pass the exam. Maybe you still have doubts about our Mule-Arch-201 exam materials. We have statistics to prove the truth. First of all, our sales volumes are the highest in the market. You can browse our official websites to check our sales volumes. At the same time, many people pass the exam for the first time under the guidance of our Mule-Arch-201 Practice Exam.
