The Internet is only required at the time of product license validation.

Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which option would be an example of PII that you need to prevent from leaving your enterprise network?

- A. National security information
- B. Trade secret
- C. Credit card number
- D. A symmetric encryption key

Answer: C

Explanation:

A credit card number is an example of PII that you need to prevent from leaving your enterprise network. PII, or personally identifiable information, is any information that can be used to identify an individual, either alone or in combination with other data. PII can be sensitive or non-sensitive, depending on the level of protection required and the potential harm if exposed. Sensitive PII includes data that can directly identify an individual and cause significant harm if leaked or stolen, such as financial information, medical records, or government-issued ID numbers. Non-sensitive PII includes data that is easily accessible from public sources and does not pose a high risk of identity theft, such as zip code, race, or gender. A credit card number is a sensitive PII because it can be used to access the cardholder's account, make fraudulent transactions, or steal their identity. Therefore, it is important to prevent credit card numbers from leaving the enterprise network, where they could be intercepted by hackers, malicious insiders, or third parties. To protect credit card numbers and other sensitive PII, enterprises should implement data security measures such as encryption, tokenization, masking, access control, auditing, and monitoring. Additionally, enterprises should comply with data privacy laws and standards that regulate the collection, use, and protection of PII, such as the Payment Card Industry Data Security Standard (PCI DSS), the General Data Protection Regulation (GDPR), or the California Consumer Privacy Act (CCPA).

Reference:

What is PII? Examples, laws, and standards | CSO Online

What is Personally Identifiable Information (PII)? | IBM

What Is Personally Identifiable Information (PII)? Types and Examples

What is PII (personally identifiable information)? - Cloudflare

What is Personally Identifiable Information (PII)? - Data Privacy Manager

NEW QUESTION # 24

What is a dependency for the functionality of signature-based malware detection?

- A. API integration with a sandbox
- B. Enabling quality of service
- C. Frequent database updates
- D. Support of a DLP device

Answer: C

Explanation:

Signature-based malware detection relies on a constantly updated database of known threat signatures to identify malicious files or activity. Without frequent updates, it becomes ineffective against newly emerging threats.

NEW QUESTION # 25

Which option would be an example of PII that you need to prevent from leaving your enterprise network?

- A. National security information
- B. Trade secret
- C. Credit card number

- D. A symmetric encryption key

Answer: C

Explanation:

A credit card number is an example of PII that you need to prevent from leaving your enterprise network. PII, or personally identifiable information, is any information that can be used to identify an individual, either alone or in combination with other data. PII can be sensitive or non-sensitive, depending on the level of protection required and the potential harm if exposed. Sensitive PII includes data that can directly identify an individual and cause significant harm if leaked or stolen, such as financial information, medical records, or government-issued ID numbers. Non-sensitive PII includes data that is easily accessible from public sources and does not pose a high risk of identity theft, such as zip code, race, or gender. A credit card number is a sensitive PII because it can be used to access the cardholder's account, make fraudulent transactions, or steal their identity. Therefore, it is important to prevent credit card numbers from leaving the enterprise network, where they could be intercepted by hackers, malicious insiders, or third parties. To protect credit card numbers and other sensitive PII, enterprises should implement data security measures such as encryption, tokenization, masking, access control, auditing, and monitoring. Additionally, enterprises should comply with data privacy laws and standards that regulate the collection, use, and protection of PII, such as the Payment Card Industry Data Security Standard (PCI DSS), the General Data Protection Regulation (GDPR), or the California Consumer Privacy Act (CCPA).

NEW QUESTION # 26

An administrator finds multiple gambling websites in the network traffic log.

What can be created to dynamically block these websites?

- A. Decryption policy
- B. Custom signatures
- C. Application group
- **D. URL category**

Answer: D

Explanation:

URL categories classify websites based on content type or risk, enabling dynamic policy enforcement such as blocking or allowing access. Administrators can create custom URL categories to group sites like gambling domains and apply blocking rules across the firewall infrastructure. Palo Alto Networks firewalls leverage URL categorization combined with threat intelligence to provide granular web filtering, reducing exposure to malicious or unwanted sites. This dynamic grouping approach is more manageable and scalable than creating individual signatures or static lists and allows for automated policy application aligned with organizational compliance requirements.

NEW QUESTION # 27

Which architecture model uses virtual machines (VMs) in a public cloud environment?

- A. Kubernetes
- B. Docker
- **C. Host-based**
- D. Serverless

Answer: C

Explanation:

A host-based architecture uses virtual machines (VMs) to run workloads on a shared host, commonly found in public cloud environments. Each VM operates independently with its own OS, making this model suitable for traditional and isolated application deployments.

NEW QUESTION # 28

.....

If you fail in the exam, we will refund you in full immediately at one time. After you buy our Palo Alto Networks Cybersecurity Practitioner exam torrent you have little possibility to fail in exam because our passing rate is very high.
