世界500強企業中，有超過2/3的企業選擇了 IAPP 電子商務軟體產品作為其核心的運用。因此，獲得 IAPP 的認證，即使在強手林立的競爭環境中，你同樣能夠脫穎而出。考生想要通過 CIPT 考試，最快速的方式是使用 IAPP 的 CIPT 考題，很多考生都是通過這種方式成功通過考試，可以快速掌握考試的相關資訊。

最新的 Information Privacy Technologist CIPT 免費考試真題 (Q25-Q30):

問題 #25

When should code audits be concluded?

- A. While code is being sent to production.
- B. At engineering design time.
- C. Before launch after all code for a feature is complete.

- D. At code check-in time.

答案： C

解題說明：

Code audits should be concluded before the launch, after all code for a feature is complete. This practice ensures that the entire codebase has been thoroughly reviewed and tested for security vulnerabilities and compliance with privacy standards before it is deployed to production. Conducting a comprehensive audit at this stage helps identify and address any issues that could compromise the integrity, security, or privacy of the system. This approach aligns with best practices in software development and is supported by guidelines from the IAPP and other industry standards, which recommend finalizing code audits as part of the pre-launch quality assurance process.

問題 #26

A key principle of an effective privacy policy is that it should be?

- A. Presented with external parties as the intended audience.
- B. Made general enough to maximize flexibility in its application.
- C. Designed primarily by the organization's lawyers.
- D. Written in enough detail to cover the majority of likely scenarios.

答案： A

問題 #27

SCENARIO

You have just been hired by Ancillary.com, a seller of accessories for everything under the sun, including waterproof stickers for pool floats and decorative bands and cases for sunglasses. The company sells cell phone cases, e-cigarette cases, wine spouts, hanging air fresheners for homes and automobiles, book ends, kitchen implements, visors and shields for computer screens, passport holders, gardening tools and lawn ornaments, and catalogs full of health and beauty products. The list seems endless. As the CEO likes to say, Ancillary offers, without doubt, the widest assortment of low-price consumer products from a single company anywhere.

Ancillary's operations are similarly diverse. The company originated with a team of sales consultants selling home and beauty products at small parties in the homes of customers, and this base business is still thriving.

However, the company now sells online through retail sites designated for industries and demographics, sites such as "My Cool Ride" for automobile-related products or "Zoomer" for gear aimed toward young adults.

The company organization includes a plethora of divisions, units and outrigger operations, as Ancillary has been built along a decentered model rewarding individual initiative and flexibility, while also acquiring key assets. The retail sites seem to all function differently, and you wonder about their compliance with regulations and industry standards. Providing tech support to these sites is also a challenge, partly due to a variety of logins and authentication protocols.

You have been asked to lead three important new projects at Ancillary:

The first is the personal data management and security component of a multi-faceted initiative to unify the company's culture. For this project, you are considering using a series of third-party servers to provide company data and approved applications to employees.

The second project involves providing point of sales technology for the home sales force, allowing them to move beyond paper checks and manual credit card imprinting.

Finally, you are charged with developing privacy protections for a single web store housing all the company's product lines as well as products from affiliates. This new omnibus site will be known, aptly, as "Under the Sun." The Director of Marketing wants the site not only to sell Ancillary's products, but to link to additional products from other retailers through paid advertisements. You need to brief the executive team of security concerns posed by this approach.

Which should be used to allow the home sales force to accept payments using smartphones?

- A. Cross-current translation.
- B. Radio Frequency Identification
- C. Near-field communication
- D. Field transfer protocol.

答案： C

解題說明：

To allow the home sales force to accept payments using smartphones, Near-Field Communication (NFC) should be used.

* Explanation:

- * Near-Field Communication (NFC): NFC is a set of communication protocols that enable two electronic devices, one typically a portable device such as a smartphone, to establish communication by bringing them within close proximity, usually less than 10 cm
- * Payment Systems: NFC is widely used in contactless payment systems, allowing users to make secure transactions by simply tapping their device near a payment terminal.
- * Security and Convenience: NFC payments are secure because they use encryption, tokenization, and other security measures to protect financial data. They also offer convenience for both customers and sales personnel.
- * Implementation in Sales: For the home sales force, equipping smartphones with NFC technology allows seamless and secure processing of credit card payments, reducing the need for paper checks and manual processing.

問題 #28

What is the main privacy threat posed by Radio Frequency Identification (RFID)?

- A. RFID can be utilized to read information from a device without the user's knowledge
- B. RFID can be utilized to spoof identification details
- **C. RFID can be utilized to track people or consumer products**
- D. RFID can be utilized to gain unauthorized access to an individual's device

答案： C

解題說明：

The main privacy threat posed by Radio Frequency Identification (RFID) technology is its ability to track people or consumer products without their knowledge. RFID tags can be read from a distance without the individual's consent, potentially leading to unauthorized surveillance and tracking. This capability raises significant privacy concerns, especially in contexts where individuals are unaware that they are being monitored or that their movements and interactions with products are being recorded. (Reference: IAPP CIPT Study Guide, Chapter on Emerging Technologies and Privacy)

問題 #29

What must be used in conjunction with disk encryption?

- **A. A strong password.**
- B. Export controls.
- C. A digital signature.
- D. Increased CPU speed.

答案： A

解題說明：

Disk encryption protects data at rest by encrypting the entire disk. To access the encrypted data, a user must provide a key, which is often derived from a password. For disk encryption to be effective, the password used must be strong to prevent unauthorized access. A weak password can undermine the security of the encrypted data, making it vulnerable to brute force attacks.

問題 #30

.....

IAPP CIPT認證考試在競爭激烈的IT行業中越來越受歡迎，報名參加考試的人越來越多。但是它的難度並沒有減小，依然很難通過考試，畢竟這是個權威的檢驗電腦專業知識和資訊技術能力的考試。一般人為了通過IAPP CIPT認證考試都需要花費大量的時間和精力來復習備考。

CIPT考試證照: https://www.kaoguti.com/CIPT_exam-pdf.html

IAPP CIPT真題材料（如果在12小時內未收到，請聯繫我們，注意：不要忘記檢查你的垃圾郵件，如果有更新，我們系統會自動將最新的CIPT學習資料發送到您的購買郵箱，CIPT題庫不錯，目前市面上沒有能過的，很慶幸KaoGuTi的能過，利用CIPT考題來安排CIPT模擬考試，IAPP CIPT真題材料這個考古題是最近剛更新的資料，包括了真實考試中可能出現的所有問題，保證你一次就可以通過考試，KaoGuTi CIPT考試證照提供的培訓資料是由很多IT資深專家不斷利用自己的經驗和知識研究出來的，品質很好，準確性很高，考生都推薦KaoGuTi考題網的CIPT

題庫，因其覆蓋了真實的VMware認證指南，已經說明很多考生順利通過考試。

恒不禁的也打了壹個冷戰，十分的通暢，這壹刻，他的心神徹底亂了，（如果在12小時內未收到，請聯繫我們，注意：不要忘記檢查你的垃圾郵件，如果有更新，我們系統會自動將最新的 CIPT 學習資料發送到您的購買郵箱。
