Salesforce Order Management Administrator Accredited Professional Sample Questions (Q29-Q34):

NEW QUESTION # 29

A company has an external system that stores client accounting data but they want to be able to search for this data within Salesforce. What three steps should the administrator take to implement this functionality?

- A. Create an automated import of the external data using the Job Scheduler
- **B. Create an External Data Source pointing to the external system's database**
- **C. Create an Indirect Lookup field to connect to the Account**
- **D. Create an External Object for each table of accounting data in the external system**
- E. Create an automated data capture (or the external system)

Answer: B,C,D

Explanation:

Explanation

Three steps that the administrator should take to implement this functionality are:

Create an External Data Source pointing to the external system's database. An External Data Source is a type of metadata that defines the connection and authentication information for an external system that stores data outside of Salesforce. The administrator can create an External Data Source using the Lightning Connect OData 2.0 or 4.0 adapters, which support read-only access to data in relational databases.

Create an External Object for each table of accounting data in the external system. An External Object is a type of custom object that maps to a table in an external system. The administrator can create an External Object for each table of accounting data that they want to access from Salesforce, and define its fields and relationships accordingly.

Create an Indirect Lookup field to connect to the Account. An Indirect Lookup field is a type of custom field that links a child External Object record to a parent standard or custom object record. The administrator can create an Indirect Lookup field on the External Object that references the Account object, and specify the external column name and value that match the Account ID.

NEW QUESTION # 30

An admin is analyzing project requirements and notes that there are requirements to support both high volume and multiple locations. What is the recommended approach for this scenario?

- A. Download the Single Location High Volume sample flow from the Partner Community and modify all the flows to loop through locations
- B. Download the Multiple Locations sample flow from the Partner Community and have developers add Apex code to enhance performance
- **C. Download the Single Location High Volume sample flow and the Multiple Locations sample flow from the Partner**

Community and make a blend between the two considering trade-offs

- D. Download the Single Location High Volume sample flow from the Partner Community and have the developers add Apex code to enhance performance

Answer: C

Explanation:

The Single Location High Volume sample flow and the Multiple Locations sample flow are two examples of how to implement order fulfillment with Order Management. The Single Location High Volume sample flow is optimized for performance and scalability, but it only supports one fulfillment location per order. The Multiple Locations sample flow supports multiple fulfillment locations per order, but it has lower performance and scalability. To support both high volume and multiple locations, an admin can download both sample flows from the Partner Community and make a blend between them, considering trade-offs such as complexity, maintainability, and customizability. NEW QUESTION # 31

Which two objects are found within Order Management?

- A. Fulfillment Order
- B. Cart
- C. Packing Manifest
- D. Receipt
- E. Payment Summary

Answer: A,E

Explanation:

Two objects that are found within Order Management are:

Fulfillment Order. A Fulfillment Order is a record that represents a group of products in an order that are fulfilled together from the same location. A Fulfillment Order has a lookup relationship to the Order Summary object, and it contains information such as the fulfillment location, delivery method, status, etc.

Payment Summary. A Payment Summary is a record that represents a payment made for an order or part of an order. A Payment Summary has a lookup relationship to both Order Summary and Invoice objects, and it contains information such as the payment amount, method, status, etc.

NEW QUESTION # 32

A user is encountering an error when attempting to save an Account record. What can an administrator use to research the issue?

- A. The Problems tab within the developer console
- B. Lightning Logs within Setup
- C. The Chrome Dev Tools Console
- D. A user trace flag and debug log on the affected user

Answer: D

Explanation:

The best way for an administrator to research the issue when a user is encountering an error when attempting to save an Account record is to use a user trace flag and debug log on the affected user. A user trace flag enables debug logging for a specific user, and a debug log captures database operations, system processes, and errors that occur when executing a transaction or running unit tests. The administrator can use these tools to identify the root cause of the error and fix it accordingly. Verified Reference:

NEW QUESTION # 33

A company's Salesforce org has high-scale orders enabled. During a flash sale, a customer service representative needs to service an order but it shows as a Pending Order Summary in Salesforce.

What should the customer service representative do?

- A. The customer service representative has to wait until the Order Summary is created
- B. Import the Order from the associated Account page
- C. Use the Create Order Summary action on the Order records actions menu
- D. Manually create the Order Summary record

Answer: A

Explanation:

The best thing for the customer service representative to do in this situation is to wait until the Order Summary is created. An Order Summary is a record that represents the financial summary of an order that is received from an external system, such as B2C Commerce or B2B Commerce. An Order Summary is created after an order is ingested into Order Management, and it triggers various flows and processes for order fulfillment and payment processing. A Pending Order Summary is a temporary record that indicates that an order has been received but not yet processed by Order Management. A customer service representative cannot service an order until it has an Order Summary record.
