Which pillar of the AWS Well-Architected Framework does this goal represent?

- A. Reliability
- B. Security
- C. Sustainability
- **D. Cost optimization**

**Answer: D**

Explanation:

Explanation

Cost optimization is one of the five pillars of the AWS Well-Architected Framework. #### **NEW QUESTION # 86**

A company needs to block SQL injection attacks.

Which AWS service or feature provides this functionality?

- **A. AWS WAF**
- B. Network ACLs
- C. AWS Trusted Advisor
- D. Security groups

**Answer: A**

Explanation:

AWS WAF is a web application firewall that helps protect applications from SQL injection attacks and other common web exploits. By defining rules to block, allow, or monitor specific types of requests, AWS WAF provides an effective defense against SQL injection. Network ACLs and Security Groups provide network-level security but do not inspect web traffic for specific attack patterns like SQL injection.

#### **NEW QUESTION # 87**

An Availability Zone consists of:

- A. two or more physical hosts in multiple data centers.
- B. one or more physical hosts in a single data center.
- C. two or more data centers in multiple locations.
- **D. one or more data centers in a single location.**

**Answer: D**

Explanation:

The correct answer is A because an Availability Zone consists of one or more data centers in a single location. An Availability Zone is an isolated location within an AWS Region that has independent power, cooling, and networking. Each Availability Zone has one or more data centers that host the physical servers and storage devices that run the AWS services. The other options are incorrect because they are not accurate descriptions of an Availability Zone. Two or more data centers in multiple locations are not an Availability Zone, but rather multiple Availability Zones within an AWS Region. One or more physical hosts in a single data center are not an Availability Zone, but rather the components of a data center within an Availability Zone. Two or more physical hosts in multiple data centers are not an Availability Zone, but rather the components of multiple data centers within one or more Availability Zones. #### **NEW QUESTION # 88**

What are some advantages of using Amazon EC2 instances to host applications in the AWS Cloud instead of on premises? (Select TWO.)

- A. EC2 has a 100% service level agreement (SLA).
- **B. EC2 has a flexible, pay-as-you-go pricing model.**

- C. EC2 has automatic storage cost optimization.
- D. EC2 includes operating system patch management
- E. EC2 integrates with Amazon VPC, AWS CloudTrail, and AWS Identity and Access Management (IAM)

**Answer: B,E**

Explanation:

Some of the advantages of using Amazon EC2 instances to host applications in the AWS Cloud instead of on premises are: EC2 integrates with Amazon VPC, AWS CloudTrail, and AWS Identity and Access Management (IAM). Amazon VPC lets you provision a logically isolated section of the AWS Cloud where you can launch AWS resources in a virtual network that you define. AWS CloudTrail enables governance, compliance, operational auditing, and risk auditing of your AWS account. AWS IAM enables you to manage access to AWS services and resources securely. Therefore, the correct answer is B. You can learn more about Amazon EC2 and its integration with other AWS services from this page.

EC2 has a flexible, pay-as-you-go pricing model. You only pay for the compute capacity you use, and you can scale up and down as needed. You can also choose from different pricing options, such as On-Demand, Savings Plans, Reserved Instances, and Spot Instances, to optimize your costs. Therefore, the correct answer is D. You can learn more about Amazon EC2 pricing from this page.

The other options are incorrect because:

EC2 does not include operating system patch management. You are responsible for managing and maintaining your own operating systems on EC2 instances. You can use AWS Systems Manager to automate common maintenance tasks, such as applying patches, or use Amazon EC2 Image Builder to create and maintain secure images. Therefore, the incorrect answer is A.

EC2 does not have a 100% service level agreement (SLA). The EC2 SLA guarantees 99.99% availability for each EC2 Region, not for each individual instance. Therefore, the incorrect answer is C.

EC2 does not have automatic storage cost optimization. You are responsible for choosing the right storage option for your EC2 instances, such as Amazon Elastic Block Store (EBS) or Amazon Elastic File System (EFS), and monitoring and optimizing your storage costs. You can use AWS Cost Explorer or AWS Trusted Advisor to analyze and reduce your storage spending. Therefore, the incorrect answer is E.
