

Pass Guaranteed 2026 DOP-C02: AWS Certified DevOps Engineer - Professional–Valid Exams Torrent

BONUS!!! Download part of PrepAwayExam DOP-C02 dumps for free: https://drive.google.com/open?id=1_3x8QmKj6yfhIctD1KvD2aHk2VshJE2A

If you are a college student, you can learn and use online resources through the student learning platform over the DOP-C02 study materials. On the other hand, the DOP-C02 study engine are for an office worker, free profession personnel have different learning arrangement, such extensive audience greatly improved the core competitiveness of our products, to provide users with better suited to their specific circumstances of high quality learning resources, according to their aptitude, on-demand, maximum play to the role of the DOP-C02 Exam Question.

The Amazon DOP-C02 certification will further demonstrate your expertise in your profession and remove any room for ambiguity on the hiring committee's part. People need to increase their level by getting the Amazon DOP-C02 Certification. You can choose flexible timings for the learning Amazon DOP-C02 exam questions online and practice with Amazon DOP-C02 exam dumps any time.

>> DOP-C02 Exams Torrent <<

Amazon DOP-C02 Exam Questions Are Out - Download And Prepare [2026]

The marketplace is competitive, especially for securing a well-paid job. Moving your career one step ahead with DOP-C02 certification will be a necessary and important thing. How to get the DOP-C02 exam dumps with 100% pass is also important. DOP-C02 training topics will ensure you pass at first time. The experts who involved in the edition of DOP-C02 questions & answers all have rich hands-on experience, which guarantee you the high quality and high pass rate.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q12-Q17):

NEW QUESTION # 12

A company requires its developers to tag all Amazon Elastic Block Store (Amazon EBS) volumes in an account to indicate a desired backup frequency. This requirement Includes EBS volumes that do not require backups. The company uses custom tags named Backup_Frequency that have values of none, dally, or weekly that correspond to the desired backup frequency. An audit finds that developers are occasionally not tagging the EBS volumes.

A DevOps engineer needs to ensure that all EBS volumes always have the Backup_Frequency tag so that the company can perform backups at least weekly unless a different value is specified.

Which solution will meet these requirements?

- A. Set up AWS Config in the account. Use a managed rule that returns a compliance failure for EC2::Volume resources that do not have a Backup_Frequency tag applied. Configure a remediation action that uses a custom AWS Systems Manager Automation runbook to apply the Backup_Frequency tag with a value of weekly.
- B. Set up AWS Config in the account. Create a custom rule that returns a compliance failure for all Amazon EC2 resources that do not have a Backup_Frequency tag applied. Configure a remediation action that uses a custom AWS Systems Manager Automation runbook to apply the Backup_Frequency tag with a value of weekly.
- C. Turn on AWS CloudTrail in the account. Create an Amazon EventBridge rule that reacts to EBS CreateVolume events or EBS ModifyVolume events. Configure a custom AWS Systems Manager Automation runbook to apply the Backup_Frequency tag with a value of weekly. Specify the runbook as the target of the rule.
- D. Turn on AWS CloudTrail in the account. Create an Amazon EventBridge rule that reacts to EBS CreateVolume events. Configure a custom AWS Systems Manager Automation runbook to apply the Backup_Frequency tag with a value of weekly. Specify the runbook as the target of the rule.

Answer: A

NEW QUESTION # 13

A company is reviewing its IAM policies. One policy written by the DevOps engineer has been (lagged as too permissive. The policy is used by an AWS Lambda function that issues a stop command to Amazon EC2 instances tagged with Environment: NonProduction over the weekend. The current policy is:

What changes should the engineer make to achieve a policy of least permission? (Select THREE.)

A. Add the following conditional expression:

```

"Condition": {
  "StringEquals": {
    "aws:principaltype": "lambda.amazonaws.com"
  }
}

```

B. Change "Resource": "*" to "Resource": "arn:aws:ec2:*:*:instance/*"

C. Add the following conditional expression:

```

"Condition": {
  "StringNotEquals": {
    "ec2:ResourceTag/Environment": "Production"
  }
}

```

D. Add the following conditional expression:

```

"Condition": {
  "StringEquals": {
    "ec2:ResourceTag/Environment": "NonProduction"
  }
}

```

E. Change "Action": "ec2:*" to "Action": "ec2:StopInstances"

F. Add the following conditional expression:

```

"Condition" : {
  "DateGreaterThan" : {
    "aws:CurrentTime" : "$ ;{aws:DateTime:Friday}"
  },
  "DateLessThan": {
    "aws:CurrentTime" : "$ ;{aws:DateTime:Monday}"
  }
}

```

- A. Option A
- B. option C

- C. option D
- D. option B
- E. Option E
- F. Option F

Answer: A,C,D

Explanation:

The engineer should make the following changes to achieve a policy of least permission:

A: Add a condition to ensure that the principal making the request is an AWS Lambda function. This ensures that only Lambda functions can execute this policy.

B: Narrow down the resources by specifying the ARN of EC2 instances instead of allowing all resources. This ensures that the policy only affects EC2 instances.

D: Add a condition to ensure that this policy only applies to EC2 instances tagged with "Environment: NonProduction". This ensures that production environments are not affected by this policy.

NEW QUESTION # 14

A company is implementing a well-architected design for its globally accessible API stack. The design needs to ensure both high reliability and fast response times for users located in North America and Europe.

The API stack contains the following three tiers:

Amazon API Gateway

AWS Lambda

Amazon DynamoDB

Which solution will meet the requirements?

- A. Configure Amazon Route 53 to point to API Gateway APIs in North America and Europe using health checks. Configure the APIs to forward requests to a Lambda function in that Region. Configure the Lambda functions to retrieve and update the data in a DynamoDB table in the same Region as the Lambda function.
- B. Configure Amazon Route 53 to point to API Gateway APIs in North America and Europe using latency-based routing and health checks. Configure the APIs to forward requests to a Lambda function in that Region. Configure the Lambda functions to retrieve and update the data in a DynamoDB global table.
- C. Configure Amazon Route 53 to point to API Gateway in North America, create a disaster recovery API in Europe, and configure both APIs to forward requests to the Lambda functions in that Region. Retrieve the data from a DynamoDB global table. Deploy a Lambda function to check the North America API health every 5 minutes. In the event of a failure, update Route 53 to point to the disaster recovery API.
- D. Configure Amazon Route 53 to point to API Gateway API in North America using latency-based routing. Configure the API to forward requests to the Lambda function in the Region nearest to the user. Configure the Lambda function to retrieve and update the data in a DynamoDB table.

Answer: B

NEW QUESTION # 15

A company has a single AWS account that runs hundreds of Amazon EC2 instances in a single AWS Region. New EC2 instances are launched and terminated each hour in the account. The account also includes existing EC2 instances that have been running for longer than a week.

The company's security policy requires all running EC2 instances to use an EC2 instance profile. If an EC2 instance does not have an instance profile attached, the EC2 instance must use a default instance profile that has no IAM permissions assigned.

A DevOps engineer reviews the account and discovers EC2 instances that are running without an instance profile. During the review, the DevOps engineer also observes that new EC2 instances are being launched without an instance profile.

Which solution will ensure that an instance profile is attached to all existing and future EC2 instances in the Region?

- A. Configure an Amazon EventBridge rule that reacts to EC2 RunInstances API calls. Configure the rule to invoke an AWS Lambda function to attach the default instance profile to the EC2 instances.
- B. Configure the iam-role-managed-policy-check AWS Config managed rule with a trigger type of configuration changes. Configure an automatic remediation action that invokes an AWS Lambda function to attach the default instance profile to the EC2 instances.
- C. Configure an Amazon EventBridge rule that reacts to EC2 StartInstances API calls. Configure the rule to invoke an AWS

Systems Manager Automation runbook to attach the default instance profile to the EC2 instances.

- **D. Configure the ec2-instance-profile-attached AWS Config managed rule with a trigger type of configuration changes. Configure an automatic remediation action that invokes an AWS Systems Manager Automation runbook to attach the default instance profile to the EC2 instances.**

Answer: D

Explanation:

<https://docs.aws.amazon.com/config/latest/developerguide/ec2-instance-profile-attached.html>

NEW QUESTION # 16

A company uses AWS Storage Gateway in file gateway mode in front of an Amazon S3 bucket that is used by multiple resources. In the morning when business begins, users do not see the objects processed by a third party the previous evening. When a DevOps engineer looks directly at the S3 bucket, the data is there, but it is missing in Storage Gateway. Which solution ensures that all the updated third-party files are available in the morning?

- A. Instruct the third party to put data into the S3 bucket using AWS Transfer for SFTP.
- B. Modify Storage Gateway to run in volume gateway mode.
- **C. Configure a nightly Amazon EventBridge event to invoke an AWS Lambda function to run the RefreshCache command for Storage Gateway.**
- D. Use S3 Same-Region Replication to replicate any changes made directly in the S3 bucket to Storage Gateway.

Answer: C

Explanation:

Explanation

https://docs.aws.amazon.com/storagegateway/latest/APIReference/API_RefreshCache.html " It only updates the cached inventory to reflect changes in the inventory of the objects in the S3 bucket. This operation is only supported in the S3 File Gateway types."

NEW QUESTION # 17

.....

In order to cater to different needs of customers, three versions for DOP-C02 training materials are available, you can choose the most suitable one in accordance with your own needs. DOP-C02 PDF version is printable, and if you prefer a hard one, you can choose this version. DOP-C02 Soft test engine supports MS operating system, and it can install in more than 200 computers. DOP-C02 Online Test engine is convenient and easy to learn, you can have offline practice if you want. DOP-C02 Online soft test engine supports all web browsers and it has testing history and performance review, and you can have a general review of what you have learnt before next learning.
