最新的 HCIP-Video Conference H11-861_V4.0 免費考試真題 (Q32-Q37):

問題 #32

At an SMC video conferencing system site, the customer wants to deploy a conferencing system with converged firewall ports, with a planned DMZ. The SC1 is deployed on the intranet and SC2 is deployed in the DMZ. In this case, which of the following deployment modes is the most suitable one for SC1 and SC2?

- A. SC1 and SC2 are both proxy SCs.
- B. SC1 is the proxy SC, and SC2 is the registration SC.
- **C. SC1 is the registration SC, and SC2 is the proxy SC.**
- D. SC1 and SC2 are both registration SCs.

答案：C

解題說明：

Deploying SC1 as the registration SC on the intranet allows internal endpoints to register directly, while placing SC2 as a proxy SC in the DMZ handles external signaling traversal and secures the demilitarized zone.

問題 #33

SIP is an application-layer protocol independent of the transport-layer protocols. It can be carried over different transport protocols, such as UDP, TCP, TLS, and SCTP. Currently, SCTP is the most commonly used transport-layer protocol.

- A. TRUE
- **B. FALSE**

答案：B

解題說明：

While SIP is transport-agnostic and can run over UDP, TCP, TLS, or SCTP, UDP remains the predominant transport - SCTP is not the most commonly used.

問題 #34

An endpoint is disconnected from a conference due to a power failure. After the endpoint is powered on again, it is not called to the conference again, and the SMC does not detect that the endpoint is disconnected. The SMC O&M engineer finds that this fault is caused by the "Timeout for hang-up upon no code streams" parameter on the CloudMCU. Which of the following parameter values may cause this fault? (Choose all that apply.)

- **A. 0**
- **B. 1**
- C. 2
- D. 3

答案：A,B

解題說明：

Setting the timeout to 0 or -1 disables the automatic hang-up when no media streams are received, so the MCU never tears down the call and SMC doesn't detect the endpoint has dropped.

問題 #35

In the collaboration solution architecture, which of the following network elements are deployed at the media processing layer?

(Choose all that apply.)

- A. VP9860
- B. Box 310
- C. SMC
- D. CloudRSE

答案: A,D

解題說明:

The media processing layer handles core media functions such as audio/video encoding, decoding, mixing, recording, and streaming. The VP9860 is Huawei's MCU media server - deployed precisely in this media processing (media switching) layer to provide high-density encoding/decoding and mixing capabilities. CloudRSE (Cloud Recording & Streaming Engine) delivers recording and streaming services, which are also key media processing functions within this layer.

問題 #36

Which of the following information is displayed when you run the CloudMCU debugging command "mswt-media allflow"?

- A. MCU operation logs
- B. Current system information of the CloudMCU
- C. Conference and participant numbers of the ongoing conferences on the MCU
- D. Bit rates of all ongoing streams

答案: D

解題說明:

The mswt-media allflow command reports the bit rates of all ongoing media streams on the CloudMCU; it does not display conference/participant counts, system info, or logs.
