

Reliable EX432 Test Topics & EX432 Advanced Testing Engine

In the 21st century, all kinds of examinations are filled with the life of every student or worker. We need to pass some exams to get the corresponding certificates like EX432 certification, so as to get the recognition of enterprises and society. However, passing an EX432 Exam is not easy, and a large number of people fail to pass it every year, as is the case with the EX432 exam. But if you choose to buy our EX432 study materials, you will pass the exam easily.

RedHat EX432 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Manage multi-cluster application lifecycle using GitOps practices: Covers integrating Git, Kustomize, and Argo CD with RHACM to deploy and manage applications using GitOps workflows.
Topic 2	<ul style="list-style-type: none"> Manage the RHACM observability service: Covers enabling, managing, and customizing the observability stack to monitor multi-cluster environments.
Topic 3	<ul style="list-style-type: none"> Manage clusters by using Red Hat Advanced Cluster Management for Kubernetes (RHACM): Focuses on creating, importing, upgrading, scaling, and removing managed clusters through RHACM.

Topic 4	<ul style="list-style-type: none"> • Manage Virtualization Operator: Covers deploying and monitoring the OpenShift Virtualization Operator and managing virtual machines across multiple clusters using RHACM.
Topic 5	<ul style="list-style-type: none"> • Deploy and manage policies for multiple clusters: Covers governance architecture, RHACM policy management, Compliance Operator configuration, and related troubleshooting.
Topic 6	<ul style="list-style-type: none"> • Configure access control for multi-cluster management: Covers setting up RBAC, cluster sets, placement rules, and policies to control user and group access across clusters.
Topic 7	<ul style="list-style-type: none"> • Use Kustomize to manage resources: Covers using Kustomize templates to manage and deploy application resources across clusters.

100% Pass Quiz RedHat - EX432 - High Pass-Rate Reliable Red Hat Certified Specialist in OpenShift Advanced Cluster Management Test Topics

Perhaps you haven't heard of our company's brand yet, although we are becoming a leader of EX432 exam questions in the industry. But it doesn't matter. It's never too late to know it from now on. Our EX432 study guide may not be as famous as other brands for the time being, but we can assure you that we won't lose out on quality. We have free demos of our EX432 Practice Engine that you can download before purchase, and you will be surprised to find its good quality.

RedHat Red Hat Certified Specialist in OpenShift Advanced Cluster Management Sample Questions (Q20-Q25):

NEW QUESTION # 20

Create a policy that ensures a ConfigMap exists with specific data

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

* Write a Policy # ConfigurationPolicy enforcing a ConfigMap (name, namespace, data keys).

* Bind to placement.

* Verify on a managed cluster:

```
oc get configmap -n < ns >
```

```
oc describe configmap -n < ns > < name >
```

NEW QUESTION # 21

Create System Policy (Web Console) in RHACS

Task information: Criteria: Image OS = debian:10, Enforcement: Build & Deploy

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

* Open the RHACS (Central) console (typically via a route created by Central).

* Navigate to: Platform Configuration # System Policies .

* Click Create Policy .

* Set the policy criteria:

* Add a rule/condition such as Image OS = debian:10 (as required by the lab)

* Set enforcement to apply at Build & Deploy stages.

* Build prevents images from being admitted into pipeline/registries depending on integration.

- * Deploy prevents or flags deployments that violate policy.
 - * Save the policy.
 - * (Optional validation) Trigger a test deployment/image that matches debian:10 to confirm alerts/enforcement behavior.
- Why this matters:
- * Enforcing at build+deploy catches risky images earlier and prevents policy violations from reaching runtime.

NEW QUESTION # 22

Detach (unimport) a managed cluster safely from the hub

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

- * Identify the managed cluster:

```
oc get managedcluster
```

- * If required in your environment, remove dependent placements/policies/apps targeting it (exam often expects you to check "why deletion stuck").

- * Delete managed cluster:

```
oc delete managedcluster cluster-dev
```

- * Watch finalizers and cleanup:

```
oc get managedcluster cluster-dev -o yaml | grep finalizers -n
```

Why this matters:

Proper lifecycle operations (import/manage/detach) is core EX432/EX480 scope.

NEW QUESTION # 23

Deploy an application using Subscription + PlacementRule (legacy model)

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

- * Create a Channel (Git) and Subscription referencing it (example pattern).

- * In exams, you're usually given a repo URL and target namespace.

- * Ensure there is a placement rule/placement selecting clusters.

- * Apply manifests:

```
oc apply -f channel.yaml
```

```
oc apply -f subscription.yaml
```

- * Verify resources:

```
oc get channels.apps.open-cluster-management.io -A
```

```
oc get subscriptions.apps.open-cluster-management.io -A
```

```
oc get application.app.k8s.io -A
```

Why this matters:

Multi-cluster application lifecycle is part of ACM operations, and EX480 explicitly covers managing multi-cluster environments with ACM.

NEW QUESTION # 24

Install RHACS Operator (Web Console)

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

- * In OpenShift Web Console, go to Operators # OperatorHub .
