## 100% Pass 2026 3V0-32.23: Unparalleled Test Cloud Management and Automation Advanced Design Engine Version

Today, getting 3V0-32.23 certification has become a trend, and 3V0-32.23 exam dump is the best weapon to help you pass certification. We all know that obtaining the 3V0-32.23 certification is very difficult, and students who want to pass the exam often have to spend a lot of time and energy. After years of hard work, the experts finally developed a set of perfect learning materials 3V0-32.23 practice materials that would allow the students to pass the exam easily. With our study materials, you only need 20-30 hours of study to successfully pass the exam and reach the peak of your career. What are you waiting for? Come and buy it now.

## VMware Cloud Management and Automation Advanced Design Sample Questions (Q197-Q202):

### NEW QUESTION # 197

Which scenario aligns with the use of VMware Identity Manager in a Cloud Management logical design?

- A. Tracking employee attendance
- B. **Securing remote access to cloud resources**
- C. Managing inventory in a retail store

- D. Designing a new company logo

**Answer: B**

#### **NEW QUESTION # 198**

An architect is designing a VMware Cloud Management solution for a vSphere-based private cloud with the following requirements: The costs should be visible for all deployments.

A one-time charge must be added only to deployments in the Finance project.

Which two design decisions should the architect include? (Choose two.)

- A. Create a dedicated pricing card for the Finance project.
- B. Integrate VMware Aria Operations with VMware Aria Automation.
- C. Create a new pricing card for the Cloud Zone used by the Finance project.
- D. Integrate VMware Aria Automation with VMware Aria Costs powered by CloudHealth.
- E. Create a default pricing card for all unassigned projects.

**Answer: A,B**

Explanation:

Integrating VMware Aria Operations with VMware Aria Automation ensures cost visibility for all deployments. Creating a dedicated pricing card for the Finance project allows you to apply a one-time charge specifically to deployments in that project, meeting the requirement for project-specific cost adjustments.

#### **NEW QUESTION # 199**

An architect is completing a design for a VMware Cloud Foundation (VCF)-based private cloud that includes VMware Cloud Management components.

The customer has provided the following requirements:

Must support the automatic addition of new workload domains when created in VCF.

Must support the creation of both Virtual Machines and Virtual Networks.

What two design decisions would the architect make to meet the objective? (Choose two.)

- A. Create a vCenter cloud account for the management and each workload domain.
- B. Create a VCF cloud account for the management domain only.
- C. Create a VCF cloud account for each workload domain.
- D. Configure the Software-Defined Data Center (SDDC) Manager integration.
- E. Create a VMware NSX-T cloud account for each workload domain only.

**Answer: B,C**

Explanation:

Creating a VCF cloud account for each workload domain enables the management and provisioning of resources as new domains are added. SDDC Manager integration supports the automatic discovery and management of new workload domains and virtual resources in VCF.

#### **NEW QUESTION # 200**

What is a key benefit of integrating VMware Aria Operations for Logs into a Cloud Management logical design?

- A. Automating software updates
- B. Creating graphical user interfaces
- C. Identifying performance bottlenecks and troubleshooting
- D. Managing user authentication

**Answer: C**

#### **NEW QUESTION # 201**

An architect is responsible for reviewing the requirements for a new operations management solution design.

Which requirement would be considered a non-functional requirement?

- A. The solution must support the data collection of up to 10,000 objects.
- B. The solution must authenticate all users with the company's Active Directory domain.
- C. The solution must support the collection of data across multiple geographical locations.
- D. **The solution must be capable of supporting a Maximum Tolerable Downtime of four hours**

**Answer: D**

### Explanation:

Non-functional requirements define criteria for operation rather than specific behaviors. Maximum Tolerable Downtime relates to system availability and recoverability, making it a non-functional requirement.

## NEW QUESTION # 202
