Fantastic Microsoft New MB-500 Test Questions and Marvelous MB-500 Valid Dumps Demo

Customers first are our mission, and we will try our best to help all of you to get your MB-500 certification. We offer you the best valid and latest Microsoft MB-500 study practice, thus you will save your time and study with clear direction. Besides, we provide you with best safety shopping experience. The Paypal system will guard your personal information and keep it secret. In addition, the high pass rate will ensure you pass your MB-500 Certification with high score.

Microsoft Dynamics 365: Finance and Operations Apps Developer Sample

Questions (Q314-Q319):

NEW QUESTION # 314

You are a Dynamics 365 Finance developer.

You have the following entities.

Entity name	Staging table	Related field
OrderHeader	OrderHeaderStaging	OrderId
OrderLine	OrderLineStaging	OrderId

You must create the required fields and relationships in the staging tables.

You need to develop a composite entity that uses the OrderHeader and OrderLine entities.

Which object should you use for each action? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Action	Object
Add a foreign key relation on the table based on the OrderId field.	<div style="border: 1px solid black; padding: 2px;">▼</div> <div style="border: 1px solid black; padding: 2px;">OrderHeaderStaging</div> <div style="border: 1px solid black; padding: 2px;">OrderLineStaging</div>
Add mandatory field names.	<div style="border: 1px solid black; padding: 2px;">▼</div> <div style="border: 1px solid black; padding: 2px;">RowId, ParentRowId</div> <div style="border: 1px solid black; padding: 2px;">RefTableId, RefRecId</div> <div style="border: 1px solid black; padding: 2px;">ParentTableId, ParentRecId</div>
Add mandatory fields on the tables.	<div style="border: 1px solid black; padding: 2px;">▼</div> <div style="border: 1px solid black; padding: 2px;">OrderHeaderStaging only</div> <div style="border: 1px solid black; padding: 2px;">OrderLineStaging only</div> <div style="border: 1px solid black; padding: 2px;">OrderHeaderStaging and OrderLineStaging</div>

Answer:

Explanation:

Action	Object
Add a foreign key relation on the table based on the OrderId field.	<div style="border: 1px solid black; padding: 2px;">▼</div> <div style="border: 1px solid black; padding: 2px;">OrderHeaderStaging</div> <div style="border: 1px solid black; padding: 2px;">OrderLineStaging</div>
Add mandatory field names.	<div style="border: 1px solid black; padding: 2px;">▼</div> <div style="border: 1px solid black; padding: 2px;">RowId, ParentRowId</div> <div style="border: 1px solid black; padding: 2px;">RefTableId, RefRecId</div> <div style="border: 1px solid black; padding: 2px;">ParentTableId, ParentRecId</div>
Add mandatory fields on the tables.	<div style="border: 1px solid black; padding: 2px;">▼</div> <div style="border: 1px solid black; padding: 2px;">OrderHeaderStaging only</div> <div style="border: 1px solid black; padding: 2px;">OrderLineStaging only</div> <div style="border: 1px solid black; padding: 2px;">OrderHeaderStaging and OrderLineStaging</div>

Explanation

Graphical user interface, text, application, email Description automatically generated

Action	Object
Add a foreign key relation on the table based on the OrderId field.	<div style="border: 1px solid black; padding: 2px;">▼</div> <div style="border: 1px solid black; padding: 2px;">OrderHeaderStaging</div> <div style="border: 1px solid black; padding: 2px; background-color: #e0e0e0;">OrderLineStaging</div>
Add mandatory field names.	<div style="border: 1px solid black; padding: 2px;">▼</div> <div style="border: 1px solid black; padding: 2px; background-color: #e0e0e0;">RowId, ParentRowId</div> <div style="border: 1px solid black; padding: 2px;">RefTableId, RefRecId</div> <div style="border: 1px solid black; padding: 2px;">ParentTableId, ParentRecId</div>

NEW QUESTION # 315

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an enumeration named truckStatus that has the following statuses:

- * Empty
- * Loaded
- * Completed

You have the following code:

```
switch (trunkTable.TruckStatus)
{
    case TruckStatus::Empty:
        Info("1");
        break;
    case TruckStatus::Loaded:
        Info("2");
        break;
    case TruckStatus::Completed:
        Info("3");
        break;
}
```

You need to extend this enumeration and add the following statuses to the enumeration: Quarantine, InTransit.

You must then modify code that validates the switch statement.

Solution: Add a post handler to the method that checks the enumeration and logic for your new enumeration values using the integer value of the enumeration.

```
if ( truckTable.TruckStatus == 4 || truckTable.TruckStatus == 5)
{
    Info("Extended");
}
```

Does the solution meet the goal?

- A. No
- B. Yes.

Answer: A

NEW QUESTION # 316

A company uses Dynamics 365 finance and operations apps. The company uses Power 61 Desktop to fetch a list of customers. You need to create a Power BI report to view the list. You authenticate a Power BI Desktop instance by using a Dynamics 365 finance and operations app.

Which four actions should you perform next in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

The screenshot shows a 'Microsoft' interface with two main sections: 'Actions' and 'Answer area'. The 'Actions' list contains six items:

- Enter the name of the Customers data entity.
- Create a Power BI report by using the customer data.
- Select Get data from Power BI.
- Select OData feed.
- Enter the URL of the Customers OData endpoint.
- Enter credentials to connect a database.

The 'Answer area' is currently empty.

Answer:

Explanation:

This screenshot illustrates the correct sequence of actions. Dashed green boxes highlight the following four actions in the 'Actions' list:

- Select Get data from Power BI.
- Select OData feed.
- Enter the URL of the Customers OData endpoint.
- Enter credentials to connect a database.

These four actions are also shown in the 'Answer area' in the correct order, enclosed in dashed red boxes.

Explanation:

This screenshot shows the final state of the interface. The 'Actions' list is now reduced to two items:

- Enter the name of the Customers data entity.
- Create a Power BI report by using the customer data.

The 'Answer area' contains the following four actions in a numbered sequence:

- Select Get data from Power BI.
- Select OData feed.
- Enter the URL of the Customers OData endpoint.
- Enter credentials to connect a database.

NEW QUESTION # 317

You need to implement the reporting requirements for the Vendor exclusion list.

Which options you should use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Option
Implement reporting.	<input type="text"/> ▼ Power Platform SQL Server Reporting Services Financial Reporting
Automatically set the query range based on session context.	<input type="text"/> ▼ Controller class ReportDataProvider class UIBuilder class

Answer:

Explanation:

Requirement	Option
Implement reporting.	<input type="text"/> ▼ Power Platform SQL Server Reporting Services Financial Reporting
Automatically set the query range based on session context.	<input type="text"/> ▼ Controller class ReportDataProvider class UIBuilder class

Explanation:

SQL Server Reporting Services

Controller class

NEW QUESTION # 318

You are creating a Dynamics 365 Finance and Operations report. You cannot query the data for the report directly.

You must include parameters to specify data for the report.

You need to create the report.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Which type of class should you create to pass parameters to the report?

- Data contract class
- Report data provider class
- Report controller class
- Report UI builder class

Which type of class should you create to access and process the data for the report?

- Data contract class
- Report data provider class
- Report controller class
- Report UI builder class

Which attribute should you use to identify the class that defines report variables?

- DataContractAttribute
- DataMemberAttribute
- SysOperationContractProcessingAttribute
- SysOperationGroupAttribute

Which attribute should you use to identify parm methods to send data for the report?

- DataContractAttribute
- DataMemberAttribute
- SysOperationContractProcessingAttribute
- SysOperationGroupAttribute

Which attribute should you use to define the contract class for a provider class?

- SRSReportQueryAttribute
- SRSReportParameterAttribute
- SRSReportDataProviderBase

Answer:

Explanation:

Which type of class should you create to pass parameters to the report?

Which type of class should you create to access and process the data for the report?

Which attribute should you use to identify the class that defines report variables?

Which attribute should you use to identify parm methods to send data for the report?

Which attribute should you use to define the contract class for a provider class?
