Latest Analytics-DA-201 Real Test, Analytics-DA-201 Valid Cram Materials

Many exam candidates feel hampered by the shortage of effective Analytics-DA-201 practice materials, and the thick books and similar materials causing burden for you. Serving as indispensable choices on your way of achieving success especially during this exam, more than 98 percent of candidates pass the exam with our Analytics-DA-201 practice materials and all of former candidates made measurable advance and improvement. All Analytics-DA-201 practice materials fall within the scope of this exam for your information. The content is written promptly and helpfully because we hired the most professional experts in this area to compile the Salesforce Certified Tableau Data Analyst practice materials.

Salesforce Certified Tableau Data Analyst Sample Questions (Q170-Q175):

NEW QUESTION # 170

You conned to a Microsoft SQL Server database

You need to create a custom SQL query that retrieves rows from a table named Students Only students in the city of Berlin must be returned How should you complete the query? (Drag the appropriate Options to the Answer Area and drop into the correct locations.)

Answer:

Explanation:

Select

Where

The correct way to complete the query is:

```
SELECT * FROM [dbo].[Students]
WHERE [Students].[City] = 'Berlin'
```

The SELECT statement is used to retrieve data from a table or a view. The * symbol means that all columns will be returned. The FROM clause specifies the table or view name and the schema name.

The WHERE clause is used to filter the data based on a condition. The condition is [Students].[City] = 'Berlin', which means that only rows where the City column of the Students table is equal to 'Berlin' will be returned.

The other options are not relevant for this query. CAST is a function that converts a value from one data type to another. JOIN is a clause that combines data from two or more tables based on a common field. ON is a keyword that specifies the join condition.

UNION is a set operation that combines the results of two or more queries into one result set.

NEW QUESTION # 171

You plan to publish a workbook to Tableau Server.

You want to ensure that users can see other published dashboards from their current dashboard.

Which setting should you configure? (Click the appropriate Option in the Answer Area.)

Answer:

Explanation:

Explanation:

To achieve the requirement of letting users navigate between different published dashboards directly from their current dashboard, you need to enable the "Show sheets as tabs" option. This setting allows each sheet in your workbook, including dashboards, to be displayed as a tab, making it easy for users to switch between different views or dashboards within the same published workbook.

Here is the option you should configure:

* Check the Show sheets as tabs checkbox in the 'More Options' section.

This action will ensure that all sheets, when published to the Tableau Server, appear as tabs, facilitating user navigation across multiple dashboards included in the workbook.

NEW QUESTION # 172

A Data Analyst would like to receive the draft results of a colleague's Tableau Prep flow to start work on a dashboard before it has been published.

What should the analyst do to accomplish this?

- A. Have the colleague output the results of the flow to a .hyper file. On the Tableau Desktop Connect page, under To a File, choose "More ...", and browse for the .hyper file on the local file system.
- B. On the Tableau Desktop Connect page, under To a File, choose "More ...", and browse for the colleague's .tf file on the local file system.
- C. Have the colleague output the results of the flow to a .hyper file. Create a new workbook in Tableau Cloud, choose Files on the Connect to Data page, and upload the .hyper file from the computer.
- D. Open Tableau Desktop and make a connection to Tableau Prep, then choose the colleague's flow that the analyst wants to connect to.

Answer: A

NEW QUESTION # 173

You create the following story that contains two story point.

You want to change the story point format to show the current story point number out of the total number of story points.

Which Layout option should you use?

- A. Numbers
- B. Arrows only
- C. Dots

- D. Caption boxes

Answer: A

Explanation:

To change the story point format to show the current story point number out of the total number of story points, you should use the Numbers option in the Layout tab. This option will display the story points as numbers in a horizontal or vertical sequence, such as 1/2, 2/2. You can also choose to show or hide the next and previous arrows for navigation. The Numbers option will help you indicate the progress and order of your story points more clearly than the other options. References:

NEW QUESTION # 174

You have a large data source that contains more than 10 million rows. Users can filter the rows by a field named Animal. The following is a sample of the data.

You want to improve the performance of the views by including only animals of a particular type. To which filter should you add the Type field on the worksheet?

- A. Context filter
- B. Table calculation filter
- C. Dimension filter
- D. Measure filter

Answer: A

NEW QUESTION # 175

.....
