問題 #29

When accessing the FortiSASE portal for the first time, an administrator must select data center locations for which three FortiSASE components? (Choose three.)

- A. Authentication
- B. SD-WAN hub
- C. Points of presence
- D. Endpoint management
- E. Logging

答案： C,D,E

解題說明：

When accessing the FortiSASE portal for the first time, an administrator must select data center locations for the following FortiSASE components:

Endpoint Management:

The data center location for endpoint management ensures that endpoint data and policies are managed and stored within the chosen geographical region.

Points of Presence (PoPs):

Points of Presence (PoPs) are the locations where FortiSASE services are delivered to users. Selecting PoP locations ensures optimal performance and connectivity for users based on their geographical distribution.

Logging:

The data center location for logging determines where log data is stored and managed. This is crucial for compliance and regulatory requirements, as well as for efficient log analysis and reporting.

FortiOS 7.2 Administration Guide: Details on initial setup and configuration steps for FortiSASE.

FortiSASE 23.2 Documentation: Explains the importance of selecting data center locations for various FortiSASE components.

問題 #30

Which two deployment methods are used to connect a FortiExtender as a FortiSASE LAN extension? (Choose two.)

- A. Enter the FortiSASE domain name in the FortiExtender GUI as a static discovery server
- B. Configure an IPsec tunnel on FortiSASE to connect to FortiExtender.
- C. Enable Control and Provisioning Wireless Access Points (CAPWAP) access on the FortiSASE portal.
- D. Connect FortiExtender to FortiSASE using FortiZTP

答案: A,D

解題說明:

There are two deployment methods used to connect a FortiExtender as a FortiSASE LAN extension:

Connect FortiExtender to FortiSASE using FortiZTP:

FortiZero Touch Provisioning (FortiZTP) simplifies the deployment process by allowing FortiExtender to automatically connect and configure itself with FortiSASE.

This method requires minimal manual configuration, making it efficient for large-scale deployments.

Enter the FortiSASE domain name in the FortiExtender GUI as a static discovery server:

Manually configuring the FortiSASE domain name in the FortiExtender GUI allows the extender to discover and connect to the FortiSASE infrastructure.

This static discovery method ensures that FortiExtender can establish a connection with FortiSASE using the provided domain name.

FortiOS 7.2 Administration Guide: Details on FortiExtender deployment methods and configurations.

FortiSASE 23.2 Documentation: Explains how to connect and configure FortiExtender with FortiSASE using FortiZTP and static discovery.

問題 #31

Your FortiSASE customer has a small branch office in which ten users will be using their personal laptops and mobile devices to access the internet.

Which deployment should they use to secure their internet access with minimal configuration?

- A. Deploy SD-WAN on-ramp to secure internet access.
- B. Deploy FortiGate as a LAN extension to secure internet access.
- C. Deploy FortiClient endpoint agent to secure internet access.
- D. Deploy FortiAP to secure internet access.

答案: D

解題說明:

Deploying FortiAP enables secure internet access for unmanaged personal devices in small branch offices with minimal configuration by automatically directing traffic through FortiSASE, eliminating the need for endpoint installation or complex setup.

問題 #32

What information can be gleaned from a detailed analysis of login attempts logged by FortiSASE to detect potential security threats?

- A. Duration of user sessions
- B. Patterns indicating brute force attacks
- C. Frequency of password resets
- D. Employee login schedules

答案: B

問題 #33

Which service is included in a secure access service edge (SASE) solution, but not in a security service edge (SSE) solution?

- A. SD-WAN

- B. CASB
- C. SWG
- D. ZTNA

答案： A

解題說明：

SD-WAN is a networking component included in a SASE solution but not in an SSE solution. SSE focuses solely on security services (like ZTNA, SWG, and CASB), while SASE combines both networking (e.g., SD- WAN) and security into a unified cloud-delivered service.
