

Quiz Useful Python Institute - PCEP-30-02 - PCEP - Certified Entry-Level Python Programmer Exam Discount Voucher

BONUS!!! Download part of ActualTestsIT PCEP-30-02 dumps for free: <https://drive.google.com/open?id=1yXxf0NDaPf7PFIdGPBueR4NGzyjR4P21>

All the PCEP-30-02 training files of our company are designed by the experts and professors in the field. The quality of our study materials is guaranteed. According to the actual situation of all customers, we will make the suitable study plan for all customers. If you buy the PCEP-30-02 learning dumps from our company, we can promise that you will get the professional training to help you pass your exam easily. By our professional training, you will pass your exam and get the related certification in the shortest time.

Our PCEP-30-02 prep material target all users and any learners, regardless of their age, gender and education background. We provide 3 versions of our PCEP-30-02 learning prep for the clients to choose based on the consideration that all the users can choose the most suitable version to learn. The 3 versions each support different using method and equipment and the client can use the PCEP-30-02 Exam study materials on the smart phones, laptops or the tablet computers. The clients can choose the version of our PCEP-30-02 exam questions which supports their equipment on their hands to learn.

PCEP-30-02 Latest Exam Cost & Latest PCEP-30-02 Training

In the process of using the PCEP-30-02 study materials, once users have any questions about our study materials, the user can directly by E-mail us, our products have a dedicated customer service staff to answer for the user, they are 24 hours service for you, we are very welcome to contact us by E-mail and put forward valuable opinion for us. Our PCEP-30-02 Study Materials already have many different kinds of learning materials, users may be confused about the choice, what is the most suitable PCEP-30-02 study materials? Believe that users will get the most satisfactory answer after consultation.

Python Institute PCEP - Certified Entry-Level Python Programmer Sample Questions (Q37-Q42):

NEW QUESTION # 37

What is the expected result of running the following code?

□

- A. The code prints 1 .
- **B. The code raises an unhandled exception.**
- C. The code prints 0
- D. The code prints 2

Answer: B

Explanation:

The code snippet that you have sent is trying to use the index method to find the position of a value in a list.

The code is as follows:

```
the_list = [1, 2, 3, 4, 5] print(the_list.index(6))
```

The code starts with creating a list called "the_list" that contains the numbers 1, 2, 3, 4, and 5. Then, it tries to print the result of calling the index method on the list with the argument 6. The index method is used to return the first occurrence of a value in a list.

For example, the_list.index(1) returns 0, because 1 is the first value in the list.

However, the code has a problem. The problem is that the value 6 is not present in the list, so the index method cannot find it. This will cause a ValueError exception, which is an error that occurs when a function or operation receives an argument that has the right type but an inappropriate value. The code does not handle the exception, and therefore it will terminate with an error message.

The expected result of the code is an unhandled exception, because the code tries to find a value that does not exist in the list.

Therefore, the correct answer is C. The code raises an unhandled exception.

NEW QUESTION # 38

How many hashes (+) does the code output to the screen?

□

- **A. five**
- B. zero (the code outputs nothing)
- C. three
- D. one

Answer: A

Explanation:

The code snippet that you have sent is a loop that checks if a variable "floor" is less than or equal to 0 and prints a string accordingly.

The code is as follows:

```
floor = 5 while floor > 0: print("+") floor = floor - 1
```

The code starts with assigning the value 5 to the variable "floor". Then, it enters a while loop that repeats as long as the condition "floor > 0" is true. Inside the loop, the code prints a "+" symbol to the screen, and then subtracts 1 from the value of "floor". The loop ends when "floor" becomes 0 or negative, and the code exits.

The code outputs five "+" symbols to the screen, one for each iteration of the loop. Therefore, the correct answer is C. five.

NEW QUESTION # 39

What is the expected output of the following code?

□

- A. 0
- B. yh
- C. The code is erroneous and cannot be run.
- **D. 12.849.923.2**

Answer: D

NEW QUESTION # 40

Insert the code boxes in the correct positions in order to build a line of code which asks the user for an Integer value and assigns it to the depth variable.

(Note: some code boxes will not be used.)

Answer:

Explanation:

NEW QUESTION # 41

What is the expected output of the following code?

- A. 0
- **B. 1**
- C. 2
- D. The code outputs nothing.

Answer: B

Explanation:

The code snippet that you have sent is checking if two numbers are equal and printing the result. The code is as follows:

```
num1 = 1 num2 = 2 if num1 == num2: print(4) else: print(1)
```

The code starts with assigning the values 1 and 2 to the variables "num1" and "num2" respectively. Then, it enters an if statement that compares the values of "num1" and "num2" using the equality operator (==). If the values are equal, the code prints 4 to the screen. If the values are not equal, the code prints 1 to the screen.

The expected output of the code is 1, because the values of "num1" and "num2" are not equal. Therefore, the correct answer is C. 1. Reference: [Python Institute - Entry-Level Python Programmer Certification]

NEW QUESTION # 42

.....

It will make them scrutinize how our formats work and what we offer them, for example, the form and pattern of Python Institute PCEP-30-02 exam dumps, and their relevant and updated answers. It is convenient for our consumers to check Python Institute PCEP-30-02 Exam Questions free of charge before purchasing the Python Institute PCEP-30-02 practice exam.
