Appian Senior Developer Sample Questions (Q60-Q65):

NEW QUESTION # 60
You're inspecting the items in a deployment package for issues you might have missed during package preparation.
Which two objects can be in your list of missing precedents for an application? (Choose two.)

- A. Connected System
- B. System Knowledge Center

- C. Document
- D. Group Type Custom

Answer: A,D

Explanation:
Connected System and Group Type Custom can both be missing precedents in an Appian deployment package, meaning dependent objects required by the application may not have been included.

NEW QUESTION # 61
What are three ways to optimize the memory usage of a process model? (Choose three.)

- A. Decrease the number of process variables.
- B. Divide large nodes into multiple smaller nodes.
- C. Avoid storing large blocks of text in process variables.
- D. Pass data directly to activity nodes and smart services.
- E. Configure process variables as parameters.
- F. Minimize the use of subprocesses in the model.

Answer: C,D,E

Explanation:
Passing data directly to activity nodes and smart services reduces unnecessary use of process variables, optimizing memory.
Configuring process variables as parameters limits their lifespan and persistence, saving memory.
Avoiding large blocks of text in process variables minimizes memory consumption within the process model.

NEW QUESTION # 62
What are two advantages of database normalization? (Choose two.)

- A. Minimizing the number of tables that need to be created.
- B. Simplifying query statements to read data.
- C. Minimizing data redundancy.
- D. Enforcing data integrity.

Answer: C,D

Explanation:
Database normalization enforces data integrity by structuring data and relationships to prevent anomalies.
It minimizes data redundancy by ensuring each piece of information is stored only once, reducing duplication.

NEW QUESTION # 63
You're configuring Health Check settings under the Admin Console.
Which section would you find the setting to indicate that the Health Check will run on a Production Environment?

- A. Scheduling
- B. General
- C. Automatic Upload

Answer: C

Explanation:
The Automatic Upload section in the Health Check settings of the Admin Console includes the option to indicate that the Health Check is running on a Production Environment, which helps Appian appropriately analyze and benchmark the data.

NEW QUESTION # 64
You notice that a process consumes a significant amount of memory. The process involves ingesting long strings from a web service and saving them to the database using a looping approach. The string output is saved to a process variable with data type Text.

Which two options will reduce the memory usage? (Choose two.)

- A. Save the string output directly to the data structure to be written to the database.
- B. Evaluate each step in a separate script task and save the output to a process variable.
- C. Ensure that all process variables have the option "Hidden" deselected.
- D. Configure the process to delete previously completed or cancelled instances.

Answer: A,C

Explanation:
Saving the string output directly to the data structure for database writing avoids holding large text in process variables, reducing memory usage.
Deleting completed or cancelled process instances helps free up memory consumed by historical process data.
