

1Z0-931-26최신버전시험대비공부문제최신인기시험덤프데모문제

ITDumpsKR는 많은 IT인사들이Oracle인증 시험에 참가하고 완벽한1Z0-931-26인증 시험자료로 응시하여 안전하게 Oracle 1Z0-931-26인증 시험자격증 취득하게 하는 사이트입니다. Pass4Tets의 자료들은 모두 우리의 전문가들이 연구와 노력 하에 만들어진 것이며,그들은 자기만의 지식과 몇 년간의 연구 경험으로 퍼펙트하게 만들었습니다.우리 덤프들은 품질은 보장하며 갱신 또한 아주 빠릅니다.우리의 덤프는 모두 실제시험과 유사하거나 혹은 같은 문제들을 입을 약속합니다.ITDumpsKR는 100% 한번에 꼭 고난 의도인Oracle인증 1Z0-931-26시험을 패스하여 여러분의 사업에 많은 도움을 드리겠습니다.

Oracle 1Z0-931-26 Exam Syllabus Topics:

Section	Objectives
Topic 1: Provisioning and Deployment	- Configure networking and connectivity - Create and provision Autonomous AI Database - Select workload type and deployment options
Topic 2: Administration and Operations	- Scale compute and storage resources - Monitor database health and performance - Manage users and security - Performance tuning
Topic 3: Performance, Backup and Recovery	- Backup and restore operations - High availability and disaster recovery - Automate administrative tasks
Topic 4: Security and Integration	- Implement database security features - Integrate with Oracle Cloud services

최신 1Z0-931-26최신버전 시험대비 공부문제 인증시험자료

요즘 같은 인재가 많아지는 사회에도 많은 업계에서는 아직도 관련인재가 부족하다고 합니다.it업계에서도 이러한 상황입니다.Oracle 1Z0-931-26시험은 it인증을 받을 수 있는 좋은 시험입니다. 그리고ITDumpsKR는Oracle 1Z0-931-26덤프를 제공하는 사이트입니다.

최신 Oracle Cloud 1Z0-931-26 무료샘플문제 (Q58-Q63):

질문 # 58

Which can be used to ensure that your Autonomous Database is accessible only from a given set of IPs?

- A. Access Control List
- B. IPSec List
- C. Security List
- D. IP Vault

정답: A

설명:

Restricting access to an Autonomous Database to specific IPs involves network security controls. The correct answer is: Access Control List (C): In Autonomous Database, an Access Control List (ACL) defines which IP addresses or CIDR blocks (e.g., 192.168.1.0/24) can connect to the database. You configure this via the OCI console under the ADB's Access Control List settings, adding rules like Allow TCP from 10.0.0.0/16 on port 1522. This applies to public endpoints (shared infrastructure) or private endpoints with additional network rules, ensuring only authorized IPs can initiate connections. For example, a company might restrict access to its office VPN range, blocking all other traffic. ACLs work at the database level, complementing VCN security.

The incorrect options are:

Security List (A): Security Lists operate at the VCN subnet level, controlling traffic to all resources in the subnet (e.g., ingress TCP 1522 to an ADB subnet). While useful, they're broader than ADB-specific ACLs, which target the database instance directly, making ACLs the precise answer here.

IP Vault (B): There's no IP Vault in OCI. This might confuse OCI Vault (for secrets), but it doesn't manage IP access.

IPSec List (D): IPSec secures traffic via VPNs, not IP allowlisting for database access. It's unrelated to ADB connectivity restrictions.

ACLs provide a database-specific, user-friendly way to enforce IP-based access control.

질문 # 59

Which method does NOT permit you to change the database ADMIN user's password of an Oracle Autonomous Database on Shared Infrastructure?

- A. OS command line from the database server
- B. OCI CLI
- C. Admin page of the Cloud Service Console
- D. SQL Developer

정답: A

설명:

Changing the ADMIN user's password in an Autonomous Database on Shared Infrastructure is restricted to specific managed methods due to its serverless nature:

Correct Answer (C): OS command line from the database server is not permitted because Autonomous Database is fully managed by Oracle. Users do not have direct access to the underlying operating system or server, eliminating this as a viable option.

Valid Methods:

A: The Admin page in the OCI Console allows password changes via the Change Administrator Password option, a user-friendly GUI method.

B: The OCI CLI supports password updates using commands like `oci db autonomous-database update` with the `--admin-password` parameter.

D: SQL Developer can change the password using an `ALTER USER ADMIN IDENTIFIED BY <new_password>` command, provided the user has appropriate credentials.

This restriction ensures security and consistency in a managed environment.

질문 # 60

Which set of options can be specified when defining the preferred maintenance schedule of the Exadata Infrastructure for Autonomous Database Dedicated?

- A. Quarter of the Year, Month of the Quarter, Date of the Month, Start Hour
- B. Month of the Year, Week of the Month, Day of the Week, Start Hour
- C. Month of the Quarter, Week of the Month, Day of the Week, Start Hour
- D. Week of the Quarter, Day of the Week, Start Hour

정답: C

설명:

Defining a maintenance schedule for Dedicated Exadata Infrastructure allows customization:

Correct Answer (B): Month of the Quarter, Week of the Month, Day of the Week, Start Hour; is the correct set. For example, you can specify Month 2 of Q1, Week 3, Wednesday, 02:00 AM; aligning with quarterly planning while offering weekly and daily precision.

Incorrect Options:

A: Quarter of the Year; and Date of the Month; are less flexible than week-based options and not the standard format.

C: Month of the Year; skips the quarterly structure used in dedicated maintenance.

D: Omits Month of the Quarter; reducing granularity.

This flexibility minimizes disruption for dedicated deployments.

질문 # 61

Which two license types does the customer need to benefit from BYOL when leveraging on-premise Enterprise Database licenses in Oracle Autonomous Database?

- A. Exadata
- B. Transparent Data Encryption (TDE)
- **C. Real Application Clusters (RAC), but only when scaling beyond 16 OCPUs**
- **D. Multitenant**
- E. Active Data Guard

정답: C,D

설명:

Full Detailed In-Depth Explanation:

Bring Your Own License (BYOL) allows using existing on-premises Oracle licenses in the cloud:

A: False. Exadata is included in Autonomous Database; no separate license is needed.

B: False. Active Data Guard is an optional feature, not required for BYOL.

C: True. RAC is needed for BYOL when scaling beyond 16 OCPUs, as Autonomous Database uses RAC for high availability in larger deployments.

D: True. Multitenant is mandatory, as Autonomous Database uses a multitenant architecture (CDB/PDB).

E: False. TDE is included by default, not a BYOL requirement.

질문 # 62

Which statement is NOT correct when setting up compartment quotas?

- **A. Compartment quotas are set by Oracle**
- B. Along with compartment budgets, compartment quotas create a powerful toolset to manage your spending
- C. There are three types of quota policy statements which are set, unset, and zero
- D. Compartment quotas use policies that allow allocation of resources with a high level of flexibility

정답: A

설명:

Compartment quotas in OCI control resource usage within compartments. The incorrect statement is:

Compartment quotas are set by Oracle (A): This is false. Compartment quotas are not set by Oracle; they are defined by OCI administrators using quota policies in the Identity and Access Management (IAM) system. Admins write policies (e.g., set database quota to 2 autonomous-databases in tenancy) to limit resources like Autonomous Databases per compartment, giving customers full control over resource allocation. Oracle provides the framework, but the specific quotas are user-defined, not Oracle-imposed.

The correct statements are:

Along with compartment budgets, compartment quotas create a powerful toolset to manage your spending (B): True. Quotas limit resource creation (e.g., max 5 ADBs), while budgets track spending (e.g., \$1000/month), together offering comprehensive cost management. For example, a quota might cap ADB instances, and a budget alerts when costs approach a threshold.

There are three types of quota policy statements which are set, unset, and zero (C): True. SET assigns a quota (e.g., set compute quota to 10 instances), UNSET removes it, and ZERO sets it to none, effectively blocking resource creation. These verbs provide flexible quota management.

Compartment quotas use policies that allow allocation of resources with a high level of flexibility (D): True. Policies are written in OCI's IAM syntax, allowing granular control (e.g., set database quota to 1 autonomous-database where target.compartment.id = 'ocid1.compartment...'), tailored to specific compartments or resources. This customer-driven approach distinguishes quotas from Oracle-managed limits.

질문 # 63

.....

ITDumpsKR의 Oracle 1Z0-931-26 교육 자료는 고객들에게 높게 평가 되어 왔습니다. 그리고 이미 많은 분들이 구매 하 셸고 Oracle 1Z0-931-26 시험에서 패스하여 검증된 자료임을 확신 합니다. Oracle 1Z0-931-26 시험을 패스하여 자격증 을 취득하면 IT 직종에 종사하고 계신 고객님의 성공을 위한 중요한 요소들 중의 하나가 될 것이라는 것을 잘 알고 있음으로 더욱 믿음직스러운 덤프로 거듭나기 위해 최선을 다해 드리겠습니다.
