Because users only need to spend little hours on the SAFe-POPM quiz guide, our learning materials will help users to learn all the difficulties of the test site, to help users pass the qualifying examination and obtain the qualification certificate. If you think that time is important to you, try our SAFe-POPM Learning Materials and it will save you a lot of time.

### Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q43-Q48):

#### NEW QUESTION # 43

Why is the problem-solving workshop more effective than traditional lessons learned documents?

- A. Collaboration over documentation is a key recommendation of the Agile Manifesto
- B. Workshops are more engaging than document writing
- C. It makes improvements actionable through backlog items for the next PI
- D. It involves a small group of leaders

**Answer: C**

Explanation:

The problem-solving workshop is more effective than traditional lessons learned documents because it makes improvements actionable through backlog items for the next Program Increment (PI). A problem-solving workshop is a structured approach to identify and solve problems that affect the performance and quality of the Agile Release Train (ART) or Solution Train<sup>1</sup>. Unlike traditional lessons learned documents, which are often passive and rarely implemented, a problem-solving workshop results in a set of improvement backlog items that are prioritized and planned for the next PI<sup>2</sup>. This way, the teams can implement the improvements and measure their impact on the value delivery<sup>3</sup>.

#### NEW QUESTION # 44

What is a pattern for splitting Features into Stories?

- A. Layers of the technology stack
- B. Tasks to complete
- C. Variations in data
- D. Team skills

**Answer: C**

Explanation:

Explanation

A pattern for splitting Features into Stories is to use variations in data, which means identifying different types of data that the feature can handle and creating a story for each type. For example, a feature that allows users to upload files can be split into stories for different file formats, sizes, or sources. This way, the stories are independent, testable, and valuable<sup>12</sup> References:

### NEW QUESTION # 45

What is one responsibility of the Product Owner during Team Sync?

- A. To facilitate the event
- B. To add new work into the Iteration
- C. To relay Customer feedback
- **D. To clarify Story intent**

**Answer: D**

Explanation:

Explanation

One responsibility of the Product Owner during Team Sync is to clarify the intent behind each user story or backlog item. This includes providing additional context, details, and answering any queries raised by the development team<sup>1</sup>. The Team Sync is a daily event where the members of the Agile team synchronize their work and plan for the next 24 hours<sup>2</sup>. The Product Owner participates in the Team Sync to ensure that the team is working on the right things and that the stories are aligned with the customer and stakeholder needs<sup>3</sup>.

### NEW QUESTION # 46

What system delivers a product or service to a Customer?

- A. Kanban System
- **B. Operational Value Stream**
- C. Dual Operating System
- D. Development Value Stream

**Answer: B**

Explanation:

An Operational Value Stream (OVS) is the sequence of activities needed to deliver a product or service to a customer<sup>1</sup>. Examples include manufacturing a product, fulfilling an order, admitting and treating a medical patient, providing a loan, or delivering a professional service<sup>1</sup>. An OVS is the system that delivers value to the customer and generates revenue for the enterprise<sup>2</sup>. In SAFe, OVSs are the primary focus of the Customer Centricity competency, which aims to understand and meet the needs and expectations of the customer<sup>3</sup>.

Some additional information that might be helpful for you are:

\* The other options (A, C, and D) are not systems that deliver a product or service to a customer, but rather systems or concepts that support or enable the delivery of value.

\* A Kanban System is a method of visualizing and managing the flow of work in a value stream<sup>4</sup>. A Kanban System can be applied to any type of value stream, whether operational or developmental, to improve efficiency, quality, and predictability<sup>4</sup>.

\* A Development Value Stream (DVS) is the sequence of activities needed to convert a business hypothesis into a digitally-enabled solution that delivers customer value. A DVS is the system that develops and supports the solutions used by the OVSs. In SAFe, DVSs are the primary focus of the Agile Product Delivery competency, which aims to continuously explore, integrate, deploy, and release value.

\* A Dual Operating System is a concept proposed by John Kotter that describes the need for organizations to balance the traditional hierarchical structure with a more agile and networked structure. A Dual Operating System enables organizations to exploit their existing capabilities while exploring new opportunities for innovation and growth. In SAFe, a Dual Operating System is achieved by applying the Lean-Agile Leadership competency, which fosters a culture of learning and empowerment.

### NEW QUESTION # 47

Which of the following Agile Manifesto principles aligns with conducting a System Demo?

- A. The team reflects on how to become more effective at regular intervals
- B. Welcome changing requirements, even late in development

- C. Working software is the primary measure of progress
- D. The best way to convey information is a face-to-face conversation

**Answer: C**

Explanation:

Explanation

The System Demo is an event where the Agile Release Train (ART) demonstrates the integrated and working software to the stakeholders and customers<sup>1</sup>. The System Demo aligns with the Agile Manifesto principle that states: "Working software is the primary measure of progress"<sup>2</sup>. This principle emphasizes the value of delivering functional and usable software over comprehensive documentation or adherence to a plan<sup>3</sup>. The System Demo provides feedback on the quality, usability, and value of the software, as well as the effectiveness of the ART<sup>1</sup>.
