

# For Quick Exam preparation download, the Amazon AWS-Solutions-Associate Exam dumps

BraindumpStudy is a website which is able to speed up your passing the Amazon certification AWS-Solutions-Associate exams. Our Amazon certification AWS-Solutions-Associate exam question bank is produced by BraindumpStudy's experts's continuously research of outline and previous exam. When you are still struggling to prepare for passing the Amazon certification [AWS-Solutions-Associate Exams](#), please choose BraindumpStudy's latest Amazon certification AWS-Solutions-Associate exam question bank, and it will brings you a lot of help.

As the industry has been developing more rapidly, our AWS-Solutions-Associate exam dumps have to be updated at irregular intervals in case of keeping pace with changes. To give you a better using environment, our experts have specialized in the technology with the system upgraded to offer you the latest [AWS-Solutions-Associate Exam](#) practices. What's more, we won't charge you in one-year cooperation; if you are pleased with it, we may have further cooperation. We will inform you of the latest preferential activities about our AWS-Solutions-Associate test braindumps to express our gratitude towards your trust.

## Quiz 2023 Amazon AWS-Solutions-Associate Fantastic Reliable Test Sample

All these three Amazon AWS-Solutions-Associate exam questions formats contain the real, valid, and error-free AWS Certified Solutions Architect - Associate (SAA-C02) (AWS-Solutions-Associate) exam

[Make Exam Preparation Simple BraindumpStudy Real Amazon AWS-Solutions-Associate Exam Questions](#)

P.S. Free 2026 Amazon AWS-Solutions-Associate dumps are available on Google Drive shared by Pass4sures: [https://drive.google.com/open?id=1dlugwNF5HPfH-HKSAUucUT\\_iKwP-GKiu](https://drive.google.com/open?id=1dlugwNF5HPfH-HKSAUucUT_iKwP-GKiu)

The Pass4sures is one of the most in-demand platforms for Amazon AWS-Solutions-Associate exam preparation and success. The Pass4sures is offering valid, and real Amazon AWS-Solutions-Associate exam dumps. They all used the Amazon AWS-Solutions-Associate exam dumps and passed their dream Amazon AWS-Solutions-Associate Exam easily. The Amazon AWS-Solutions-Associate exam dumps will provide you with everything that you need to prepare, learn and pass the difficult Amazon AWS-Solutions-Associate exam.

The AWS-Solutions-Associate certification exam consists of 65 multiple-choice and multiple-response questions, and you have 130 minutes to complete it. AWS-Solutions-Associate exam is available in English, Japanese, Korean, and Simplified Chinese, and it can be taken in-person at a testing center or online through a proctoring service.

The AWS Certified Solutions Architect - Associate exam covers a wide range of topics related to AWS services and solutions. AWS-Solutions-Associate exam tests the candidate's ability to design and deploy scalable, highly available, and fault-tolerant systems using AWS services such as EC2, S3, RDS, and VPC. AWS-Solutions-Associate Exam also requires candidates to have a good understanding of AWS security features, such as IAM, AWS Certificate Manager, and AWS KMS. Additionally, the exam covers topics such as AWS cost optimization, AWS monitoring, and AWS deployment and management services.

## Test Amazon AWS-Solutions-Associate Registration | Hot AWS-Solutions-Associate Questions

No matter you are exam candidates of high caliber or newbies, our AWS-Solutions-Associate exam quiz will be your propulsion to gain the best results with least time and reasonable money. Not only because the outstanding content of AWS-Solutions-Associate real dumps that produced by our professional expert but also for the reason that we have excellent vocational moral to improve our AWS-Solutions-Associate Learning Materials quality. We would like to create a better future with you hand in hand, and heart with heart.

The AWS-Solutions-Associate exam covers a range of topics, including AWS architecture, security, networking, databases, and storage. In order to pass the exam, candidates must demonstrate a strong understanding of these topics and how they relate to the AWS platform. AWS-Solutions-Associate Exam consists of multiple-choice questions and is timed at 130 minutes.

### Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q236-Q241):

#### NEW QUESTION # 236

You can use \_\_\_\_\_ and \_\_\_\_\_ to help secure the instances in your VPC.

- A. security groups and biometric authentication
- B. security groups and 2-Factor authentication
- C. security groups and multi-factor authentication
- **D. security groups and network ACLs**

**Answer: D**

#### NEW QUESTION # 237

A company stores its data on premises. The amount of data is growing beyond the company's available capacity. The company wants to migrate its data from the on-premises location to an Amazon S3 bucket. The company needs a solution that will automatically validate the integrity of the data after the transfer. Which solution will meet these requirements?

- A. Create an Amazon S3 File Gateway on premises. Configure the S3 File Gateway to perform the online data transfer to an S3 bucket.
- **B. Deploy an AWS DataSync agent on premises. Configure the DataSync agent to perform the online data transfer to an S3 bucket.**
- C. Configure an accelerator in Amazon S3 Transfer Acceleration on premises. Configure the accelerator to perform the online data transfer to an S3 bucket.
- D. Order an AWS Snowball Edge device. Configure the Snowball Edge device to perform the online data transfer to an S3 bucket.

**Answer: B**

Explanation:

it allows the company to migrate its data from the on-premises location to an Amazon S3 bucket and automatically validate the integrity of the data after the transfer. By deploying an AWS DataSync agent on premises, the company can use a fully managed data transfer service that makes it easy to move large amounts of data to and from AWS. By configuring the DataSync agent to perform the online data transfer to an S3 bucket, the company can take advantage of DataSync's features, such as encryption, compression, bandwidth throttling, and data validation. DataSync automatically verifies data integrity at both source and destination after each transfer task. References:

#### NEW QUESTION # 238

A company plans to use Amazon ElastiCache for its multi-tier web application. A solutions architect creates a Cache VPC for the ElastiCache cluster and an App VPC for the application's Amazon EC2 instances. Both VPCs are in the us-east-1 Region. The solutions architect must implement a solution to provide the application's EC2 instances with access to the ElastiCache cluster. Which solution will meet these requirements MOST cost-effectively?

- A. Create a Transit VPC. Update the VPC route tables in the Cache VPC and the App VPC to route traffic through the Transit VPC. Configure an inbound rule for the ElastiCache cluster's security group to allow inbound connection from the application's security group.
- **B. Create a peering connection between the VPCs. Add a route table entry for the peering connection in both VPCs. Configure an inbound rule for the ElastiCache cluster's security group to allow inbound connection from the application's security group.**
- C. Create a peering connection between the VPCs. Add a route table entry for the peering connection in both VPCs. Configure an inbound rule for the peering connection's security group to allow inbound connection from the application's security group.
- D. Create a Transit VPC. Update the VPC route tables in the Cache VPC and the App VPC to route traffic through the Transit VPC. Configure an inbound rule for the Transit VPC's security group to allow inbound connection from the application's security group.

**Answer: B**

Explanation:

Explanation

Creating a peering connection between the two VPCs and configuring an inbound rule for the ElastiCache cluster's security group to allow inbound connection from the application's security group is the most cost-effective solution. Peering connections are free and you only incur the cost of configuring the security group rules. The Transit VPC solution requires additional VPCs and associated resources, which would incur additional costs.

#### NEW QUESTION # 239

A solutions architect is designing a two-tiered architecture that includes a public subnet and a database subnet. The web servers in the public subnet must be open to the internet on port 443. The Amazon RDS for MySQL D6 instance in the database subnet must be accessible only to the web servers on port 3306.

Which combination of steps should the solutions architect take to meet these requirements? (Select TWO.)

- **A. Create a security group for the web servers in the public subnet. Add a rule to allow traffic from 0.0.0.0/0 on port 443.**
- B. Create a security group for the DB instance. Add a rule to deny all traffic except traffic from the web servers' security group on port 3306.
- C. Create a security group for the DB instance. Add a rule to allow traffic from the web servers' security group on port 3306.
- D. Create a network ACL for the public subnet. Add a rule to deny outbound traffic to 0.0.0.0/0 on port 3306.
- **E. Create a security group for the DB instance. Add a rule to allow traffic from the public subnet CIDR block on port 3306.**

**Answer: A,E**

Explanation:

Explanation

Security groups are virtual firewalls that protect AWS instances and can be applied to EC2, ELB and RDS1

. Security groups have rules for inbound and outbound traffic and are stateful, meaning that responses to allowed inbound traffic are allowed to flow out of the instance2. Network ACLs are different from security groups in several ways. They cover entire subnets, not individual instances, and are stateless, meaning that they require rules for both inbound and outbound traffic2. Network ACLs also support deny rules, while security groups only support allow rules2.

To meet the requirements of the scenario, the solutions architect should create two security groups: one for the DB instance and one for the web servers in the public subnet. The security group for the DB instance should allow traffic from the public subnet CIDR block on port 3306, which is the default port for MySQL3. This way, only the web servers in the public subnet can access the DB instance on that port. The security group for the web servers should allow traffic from 0.0.0.0/0 on port 443, which is the default port for HTTPS4. This way, the web servers can accept secure connections from the internet on that port.

#### NEW QUESTION # 240

A financial services company wants to shut down two data centers and migrate more than 100 TB of data to AWS. The data has an intricate directory structure with millions of small files stored in deep hierarchies of subfolders. Most of the data is unstructured, and the company's file storage consists of SMB-based storage types from multiple vendors. The company does not want to change its applications to access the data after migration.

What should a solutions architect do to meet these requirements with the LEAST operational overhead?

- A. Use AWS DataSync to migrate the data to Amazon FSx for Windows File Server.
- B. Use AWS Direct Connect to migrate the data on-premises file storage to an AWS Storage Gateway volume gateway.
- C. Use AWS DataSync to migrate the data to Amazon FSx for Lustre.
- D. Use AWS Direct Connect to migrate the data to Amazon S3.

**Answer: A**

Explanation:

AWS DataSync is a data transfer service that simplifies, automates, and accelerates moving data between on-premises storage systems and AWS storage services over the internet or AWS Direct Connect<sup>1</sup>. AWS DataSync can transfer data to Amazon FSx for Windows File Server, which is a fully managed file system that is accessible over the industry-standard Server Message Block (SMB) protocol. Amazon FSx for Windows File Server is built on Windows Server, delivering a wide range of administrative features such as user quotas, end-user file restore, and Microsoft Active Directory (AD) integration<sup>2</sup>. This solution meets the requirements of the question because:

It can migrate more than 100 TB of data to AWS within a reasonable time frame, as AWS DataSync is optimized for high-speed and efficient data transfer<sup>1</sup>.

It can preserve the intricate directory structure and the millions of small files stored in deep hierarchies of subfolders, as AWS DataSync can handle complex file structures and metadata, such as file names, permissions, and timestamps<sup>1</sup>.

It can avoid changing the applications to access the data after migration, as Amazon FSx for Windows File Server supports the same SMB protocol and Windows Server features that the company's on-premises file storage uses<sup>2</sup>.

It can reduce the operational overhead, as AWS DataSync and Amazon FSx for Windows File Server are fully managed services that handle the tasks of setting up, configuring, and maintaining the data transfer and the file system<sup>1,2</sup>.
