Exam Drupal-Site-Builder Reference | Drupal-Site-Builder Free Vce Dumps

Acquia Drupal-Site-Builder exam materials of Getcertkey is developed in accordance with the latest syllabus. At the same time, we also constantly upgrade our training materials. So our exam training materials is simulated with the practical exam. So that the pass rate of Getcertkey is very high. It is an undeniable fact. Through this we can know that Getcertkey Acquia Drupal-Site-Builder Exam Training materials can brought help to the candidates. And our price is absolutely reasonable and suitable for each of the candidates who participating in the IT certification exams.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q34-Q39):

NEW QUESTION # 34

While building a new site, you are working with the default frontend theme. You have placed custom blocks in available regions. After some time, you decide to install a new contributed theme, and set it as the default for the site.

After switching to the new theme, you notice that many of your blocks have disappeared!
What is the likely reason for this?

- A. The blocks have not yet been registered with the new theme.
- B. The new theme only allows system blocks, not custom blocks.
- **C. The new theme's regions have different names from the regions in the old theme. Those blocks have been disabled.**
- D. The blocks were built in such a way that they are not compatible with the new theme. They need to be re-created.

Answer: C

Explanation:

In Drupal 10 and Drupal 11, block placement is defined per theme. The Block Layout documentation explains that when placing a block, you are assigning it to a region in a specific theme, not globally for all themes. So when you switch the site's default theme, the new theme may have a different set of regions or different region names, and block placements from the previous theme may no longer map correctly.

Drupal's theming documentation is even more explicit: if a theme does not define a region that blocks were assigned to, those blocks are treated as assigned to an invalid region and are disabled. The Block module documentation also states that disabled blocks (blocks not assigned to any region in your theme) are never shown. This is exactly why blocks can appear to "disappear" after changing themes.

The other options do not match Drupal's documented behavior. Blocks do not need to be "registered" with a theme in this sense, contributed themes are not limited to system blocks, and custom blocks generally do not need to be recreated just because the theme changed. The issue is the theme-specific region mapping, which makes D the correct answer.

NEW QUESTION # 35

Your website is showing a warning message that a contributed module "Password Policy" has a new security update.
What action will you take?

- **A. Download the latest version of the module. And visit the update.php page to complete the update.**
- B. Uninstall the currently installed module. Download the latest version of the module and configure it again.
- C. No action is needed as security updates are not important.
- D. Drupal will update and install security update automatically on the next cron run.

Answer: A

Explanation:

In Drupal 10 and Drupal 11, security updates for contributed modules must be applied promptly to protect the site from known vulnerabilities. Drupal core provides a built-in Update Manager module that notifies administrators when updates, especially security releases, are available. However, Drupal does not automatically install updates, including during cron runs, so option C is incorrect. The correct process, as documented in Drupal's official update procedures, involves downloading the latest recommended release of the module (typically via Composer or manual replacement), and then running database updates using the /update.php script or drush updb. This ensures that any schema changes required by the new version are properly applied.

Option B is incorrect because uninstalling a module is unnecessary and can lead to data loss or configuration issues. Option A is clearly wrong, as ignoring security updates exposes the site to risks.

Therefore, the proper and documented approach is to update the module codebase and run update.php to finalize the update process, making option D the correct answer.

NEW QUESTION # 36

Your Main navigation menu has two levels of menu items like sections, and child pages within each section.

Your UX team wants to make it easier for a site visitor viewing a child page to see what other pages are in that section. They have asked you to add a submenu to the Sidebar region on child pages.

How can you add a submenu to the child pages that shows all child pages in the section?

- A. Create a new menu for each main section containing links for each child page, and add each menu's block to the Sidebar region.
- **B. In Block layout, place the Main navigation block in the Sidebar region. Set the initial visibility level to 2.**
- C. In Block layout, place the Main navigation block in the Sidebar region. Set the initial visibility level to 1.
- D. Add the Main navigation menu to the Sidebar region, and use CSS to hide the top level menu items.

Answer: B

Explanation:

In Drupal 10 and Drupal 11, menus can be displayed as blocks and configured to show specific levels of the menu hierarchy. The "Main navigation" block includes settings such as "Starting level" (or initial visibility level) and "Maximum number of levels to display." These settings allow site builders to control which part of the menu tree is visible in a given region.

To display only the child pages (submenu items) when a user is on a child page, you need to configure the block to start displaying from level 2, which corresponds to the submenu under the current top-level section.

This ensures that only relevant sibling pages within the same section are shown in the sidebar, improving usability and navigation.

Option B (level 1) would still show top-level menu items, not just the submenu. Option A is not recommended because using CSS to hide elements does not follow Drupal's configuration best practices.

Option D is unnecessary and inefficient, as Drupal's menu system already supports hierarchical display without creating duplicate menus.

Thus, configuring the menu block with an initial visibility level of 2 is the correct and recommended approach.

NEW QUESTION # 37

You have created a new View on the development environment.

How will you export the View to the production environment?

- A. Use backup and migrate module to export the view
- **B. Make the required changes to the development site. Partial export using single export option and import on the live site**
- C. Select synchronize configurations option on production environment
- D. This requires development effort and cannot be done by Drupal admin interface

Answer: B

Explanation:

In Drupal 10 and Drupal 11, a View is stored as configuration, and Drupal provides a built-in Configuration Management system to move configuration between environments. According to the official Drupal User Guide, when you want to move a single configuration item (such as a View), the recommended approach is to use the Single Export and Single Import functionality available in the admin interface.

On the development site, you navigate to Configuration # Development # Configuration synchronization # Export # Single item, select View, and copy the YAML configuration. Then, on the production site, you go to Import # Single item and paste the configuration to import it.

Option A refers to full configuration synchronization, which is typically used for complete site configuration deployment, not for a single View. Option B is incorrect because Backup and Migrate is meant for database backups, not configuration transfer. Option C is incorrect because Drupal provides a UI-based method for this task.

Thus, the correct and documented approach is partial export/import using the single configuration option, making D the correct answer.

NEW QUESTION # 38

You need to add a "Star performer" block into your company's website. The block should show the name and picture of a selected star performer employee and should be editable in the normal block layout interface. All the employees are users of the website.

How do you implement the block?

- **A. Create a user view mode with user name and picture. Add a user reference field to one of your block types and let the user reference field use the new user view mode.**
- B. Create a new Users View with user name field and user picture and an exposed filter on uid. Add a block display to the view and place the block in the block layout.
- C. Add a custom block and select the type "user account information", activate the user name and picture fields.
- D. Install the user_blocks module from Drupal.org, select the fields you need and place block via block layout.

Answer: A

Explanation:

Drupal 10 and Drupal 11 recommend using entity references and view modes to display structured entity data (like users) within other entities such as blocks. The requirement is to display a selected user (employee) with their name and picture and allow editors to choose which user appears in the block through the block editing UI.

Option D follows Drupal best practices. First, you create a custom view mode for users (e.g., "Star Performer") and configure it to

display only the necessary fields such as user name and profile picture. Then, you create a custom block type with a user reference field, allowing editors to select a specific user. The display of that referenced user can be configured to use the custom view mode, ensuring consistent formatting.

Option B is less suitable because it relies on Views filtering rather than allowing editors to directly select a specific user. Option A depends on a contributed module unnecessarily. Option C is incorrect because Drupal does not provide a default block type for selecting arbitrary user entities in that way.

Thus, using a user reference field with a dedicated view mode is the correct and scalable Drupal solution.

NEW QUESTION # 39

.....

You may be also one of them, you may still struggling to find a high quality and high pass rate Drupal-Site-Builder study question to prepare for your exam. Our product is elaborately composed with major questions and answers. Our study materials are choosing the key from past materials to finish our Drupal-Site-Builder Torrent prep. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the Drupal-Site-Builder exam torrent. Then, you will have enough confidence to pass it. So start with our Drupal-Site-Builder torrent prep from now on.
