Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which type of license is locally managed and does not require external tools for management?

- A. Hybrid licenses
- B. PAK licenses
- C. RTU licenses
- D. Smart licenses

Answer: C

Explanation:

Right-To-Use (RTU) licenses are locally managed licenses that allow users to activate specific features on Cisco devices without the need for external tools or connectivity to Cisco's licensing infrastructure. These licenses operate on an honor-based system, where the user agrees to comply with the licensing terms without mandatory enforcement mechanisms.

In contrast:

* Hybrid licenses combine aspects of traditional and smart licensing models.

* PAK (Product Authorization Key) licenses require registration and activation through Cisco's licensing portal.

* Smart licenses necessitate communication with Cisco's Smart Licensing servers for activation and management.

NEW QUESTION # 17

What is the purpose of the packages.conf file in Install mode on Cisco IOS XE Software supported switches?

- A. It determines which software packages need to be loaded and in what order during boot up.
- B. It is used to extract the bin file during the installation process.
- C. It contains the entire bundled software image in a single file.
- D. It is a subdirectory in flash memory where individual software packages are stored.

Answer: A

Explanation:

In Install mode, the packages.conf file plays a crucial role in the boot process of Cisco IOS XE Software. It specifies the list of software packages to be loaded and the sequence in which they should be initialized during system startup. This file ensures that all necessary components are correctly loaded, providing a modular and flexible approach to software management.

Contrary to the other options:

The packages.conf file does not extract the bin file; it references already extracted packages.

It does not contain the entire bundled image; that's characteristic of Bundle mode.

While it resides in the flash memory, it is not a subdirectory but a configuration file.

NEW QUESTION # 18

What is the primary advantage of installing and deploying Cisco UCS E-Series servers in branch office routers?

- A. To provide local compute power for edge applications
- B. To increase the packet forwarding capacity of the router
- C. To serve as a backup storage system for the main data center
- D. To enhance the wireless capabilities of the router

Answer: A

Explanation:

Cisco UCS E-Series servers are integrated, blade-style compute modules that can be installed inside Cisco ISR (Integrated Services Routers). Their primary advantage is to provide local compute resources in branch offices without needing a full data center.

environment.

This enables:

- * Hosting of virtual machines or applications locally
- * Reduced latency for edge computing
- * Lowered dependency on central data center resources

These servers are ideal for running branch-office workloads, virtualization, or edge analytics, allowing enterprises to deploy scalable compute capabilities closer to the data source.

NEW QUESTION # 20

Which two components are accessed by removing the chassis cover on Cisco Catalyst 8000 Series Edge platforms? (Choose two.)

- A. Fan trays
- B. Network Interface Modules
- C. SSDs
- D. Transceivers
- E. DIMMs

Answer: C,E

Explanation:

On Cisco Catalyst 8000 Series Edge platforms, removing the chassis cover provides access to internal components such as DIMMs (Dual In-line Memory Modules) and SSDs (Solid-State Drives). These components are located internally and require the removal of the chassis cover for maintenance or replacement.

* DIMMs are used for system memory and are essential for the router's operation.

* SSDs provide storage for system software and configurations.

Other components like Network Interface Modules (NIMs) and transceivers are typically accessible externally and do not require chassis cover removal.
