You can master the questions and answers of SAP C-CPI-2506 Exam Preparation, even adjust your exam mood actively.

SAP Certified Associate - Integration Developer Sample Questions (Q42-Q47):

NEW QUESTION # 42
Where can you configure a static payload? Note: There are 2 correct answers to this question.

- A. In a Content Modifier component of the Message Body tab
- B. In a Content Modifier component of the Message Header tab
- C. In a Data Store Operation component
- D. In a Groovy script

Answer: A,C

Explanation:
You can configure a static payload in a Data Store Operation component or in a Content Modifier component of the Message Body

tab. A Data Store Operation component allows you to store or retrieve messages in a data store. You can use the Write operation to store a static payload in a data store entry with a specified key. A Content Modifier component allows you to modify the message content, headers, and properties. You can use the Message Body tab to define a static payload for the message. NEW QUESTION # 43
What are some advantages of creating an OData interface through an API pro-vider? Note: There are 2 correct answers to this question.

- A. Automatic creation of a RAML specification
- B. Automatic creation of a WSDL specification
- C. Automatic creation of a Swagger UI
- D. Automatic creation of an openAPI specification

Answer: C,D

Explanation:
Some advantages of creating an OData interface through an API provider are automatic creation of a Swagger UI and an openAPI specification. A Swagger UI is a web-based tool that allows you to interact with the OData service and test its functionality. An openAPI specification is a standard format for describing the OData service and its metadata, which can be used by other tools and applications. NEW QUESTION # 44
What does the "Open Integration" principle of the SAP Integration Suite mean?

- A. SAP Integration Suite by default supports integrations to other SAP soft-ware.
- B. SAP Integration Suite by default supports third-party software integration.
- C. SAP Integration Suite allows SAP-to-SAP integrations.

Answer: B

Explanation:
The "Open Integration" principle of the SAP Integration Suite means that SAP Integration Suite by default supports third-party software integration. The SAP Integration Suite is an open and modular iPaaS that allows you to integrate any system or application, regardless of whether it is from SAP or not. The SAP Integration Suite provides various connectors, adapters, APIs, and pre-built integrations that enable you to connect to third-party software with ease and flexibility. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 45
You have set up a basic authentication policy, but the API proxy returns an HTTP status of 401.What could be a reason?

- A. In the AssignMessage policy, the Assign To tag has the type="response"
- B. In the AssignMessage policy, the Assign To tag has the type="preFlow"
- C. In the AssignMessage policy, the Assign To tag has the type="postFlow"
- D. In the AssignMessage policy, the Assign To tag has the type="request"

Answer: D

Explanation:
In API Management (SAP Integration Suite), when implementing Basic Authentication policies:
If the AssignMessage policy does not correctly assign credentials to the request message, authentication will fail.
This results in HTTP 401 Unauthorized.
Other tags like preFlow, postFlow, response are policy flow phases, but the credentials must be applied to the request for proper authentication.
Thus, the root cause is when the Assign To = request is missing/misconfigured.

NEW QUESTION # 46
What are the key capabilities of the SAP BTP Integration Suite? Note: There are 2 correct answers to this question.

- A. Open Connectors
- B. API Management
- C. SAP Business Application Studio
- D. Connectivity Service

Answer: B,D

Explanation:
The key capabilities of the SAP BTP Integration Suite include API Management and Connectivity Service. API Management allows you to create, publish, monitor, and secure APIs across different environments and platforms. Connectivity Service enables you to establish secure and reliable connections between cloud applications and on-premise systems using various protocols and adapters.
