

# Quiz 2026 Nutanix High Hit-Rate NCP-DB-6.10: Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Valuable Feedback

We all know that NCP-DB-6.10 learning guide can help us solve learning problems. But if it is too complex, not only can't we get good results, but also the burden of students' learning process will increase largely. Unlike those complex and esoteric materials, our NCP-DB-6.10 Preparation prep is not only of high quality, but also easy to learn. For our professional experts simplified the content of the NCP-DB-6.10 exam questions for all our customers to be understood.

Real NCP-DB-6.10 questions in our PDF document can be viewed at any time from any place using your smartphone, tablet, and laptop. If you are busy and don't have time to sit and study for the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 NCP-DB-6.10 test, download and use Nutanix NCP-DB-6.10 PDF dumps on the go. To pass the Nutanix NCP-DB-6.10 exam, it is recommended that you simply use Prep4cram NCP-DB-6.10 real dumps for a few days.

## Seeing The NCP-DB-6.10 Valuable Feedback, Passed Half of Nutanix Certified Professional - Database Automation (NCP-DB) v6.10

The Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) is available in three easy-to-use forms. The first one is NCP-DB-6.10 dumps PDF format. It is printable and portable. You can print NCP-DB-6.10 questions PDF or access them via your smartphones, tablets, and laptops. The PDF format can be used anywhere and is essential for students who like to learn on the go.

## Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q186-Q191):

### NEW QUESTION # 186

A NDB non-administrative user wants to provision an Oracle database leveraging a Software Profile that the administrator created. What must the administrator do to ensure that this user has access to the Oracle Software Profile?

- A. Promote the Software Profile to Published to be available by other NDB users.
- B. Ensure that the Software Profile has been properly versioned to the latest release of Oracle.
- C. Replicate the Software Profile to other Nutanix clusters for all users to access.
- D. Ensure that specified users have access to the Software Profile using Access Control.

**Answer: A**

Explanation:

To allow a non-administrative NDB user to provision an Oracle database using a Software Profile created by an administrator, the administrator must promote the Software Profile to Published. In NDB, Software Profiles define the database software version and configuration (e.g., Oracle binaries). By default, a newly created profile is in a draft or private state. Promoting it to "Published" makes it available for use by other NDB users, including non-administrative ones, within the access control framework. This ensures the profile is validated and accessible without requiring individual user assignments.

#### NEW QUESTION # 187

What is the terminology used for registering an existing database with Era?

- A. Source Database
- B. Greenfield Database
- C. Cloned Database
- D. Brownfield Database

**Answer: D**

Explanation:

In the context of Nutanix Era, the term "Brownfield Database" is used to refer to an existing database that is registered with Era. This process allows Era to bring Database as a Service (DBaaS) capabilities to your existing database. It's important to note that before you register a database with Era, certain prerequisites must be met.

#### NEW QUESTION # 188

An administrator originally configured the storage for an Oracle database running on Nutanix NDB using ASMLib. The administrator would like to scale the size of the database. What should the administrator do to most efficiently increase the size of the database?

- A. Mount an iSCSI LUN and extend the database onto the new LUN.
- B. Create a new, larger database and migrate.
- C. Leverage the scaling ability built into NDB to resize existing vDisks.
- D. Extend the size by adding new vDisks.

**Answer: C**

Explanation:

When an administrator needs to scale the size of an Oracle database running on Nutanix NDB and originally configured using ASMLib (Automatic Storage Management Library), the most efficient approach is to use NDB's built-in scaling ability to resize existing vDisks. NDB supports dynamic resizing of virtual disks (vDisks) associated with database VMs, allowing the administrator to increase storage capacity without disrupting the database or requiring complex migrations. This method leverages Nutanix's storage integration, resizing the underlying vDisks and updating the ASMLib configuration to reflect the new size, ensuring seamless operation.

#### NEW QUESTION # 189

An administrator needs to replace the default Nutanix self-signed certificates in Era. Which SSL Certificate file format is supported?

- A. DER encoded binary X.509
- B. Base-64 encoded X.509
- C. PKCS#12
- D. PKCS#7

**Answer: B**

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, Nutanix Era supports x509 certificates in Base-64 encoded PEM format. This format is used when an administrator needs to replace the default Nutanix self-signed certificates in Era.

### NEW QUESTION # 190

When the NDB upgrade includes updates to the out-of-the-box (OOB) software profiles, what happens to older OOB software profile versions when upgrading NDB?

- A. If the database VMs are not using the base version of the software profile NDB deletes all versions of the profiles from the metadata and protection domains.
- B. If the database VM using the software profiles are shutdown, NDB deletes all versions of the profiles from the metadata and protection domains.
- **C. If the software profiles are not in use, NDB deletes all versions of the profiles from the metadata and protection domains.**
- D. If the database VMs using the software profiles are using Time Machines and have had a successful snapshot in the last 24 hours before the patch.

**Answer: C**

Explanation:

When upgrading NDB and the upgrade includes updates to out-of-the-box (OOB) software profiles (e.g., predefined profiles for database software like PostgreSQL, SQL Server, etc.), NDB manages older versions of these profiles based on their usage. If the older OOB software profiles are not actively in use by any database VMs, NDB automatically deletes all versions of those profiles from its metadata and associated protection domains during the upgrade process. This cleanup mechanism helps maintain a lean and efficient system by removing obsolete profiles that are no longer relevant or required.

### NEW QUESTION # 191

.....

But our company can provide the anecdote for you--our NCP-DB-6.10 study materials. Under the guidance of our NCP-DB-6.10 exam practice, you can definitely pass the exam as well as getting the related certification with the minimum time and efforts. We would like to extend our sincere appreciation for you to browse our website, and we will never let you down. The advantages of our NCP-DB-6.10 Guide materials are more than you can imagine. Just rush to buy our NCP-DB-6.10 practice braindumps!
