Due to lots of same products in the market, maybe you have difficulty in choosing the SCAIP guide test. We can confidently tell you that our products are excellent in all aspects. You can directly select our products. Firstly, we have free trials of the SCAIP exam study materials to help you know our products. One of the great advantages is that you will soon get a feedback after you finish the exercises. So you are able to adjust your learning plan of the SCAIP Guide test flexibly. We hope that our new design can make study more interesting and colorful. You also can send us good suggestions about developing the study material.

Saviynt SCAIP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Analytics: This section focuses on building, configuring, and delivering reports, analytic controls, and dashboards to support data-driven identity governance decisions.
Topic 2	<ul style="list-style-type: none"> • Access Request System: This section focuses on configuring and managing the end-to-end access request process, including workflows, approvals, and provisioning for both connected and disconnected applications.

Topic 3	<ul style="list-style-type: none"> • Rules Engineering: This section covers creating and managing automated access policies and rules that handle joiner, mover, and leaver scenarios through technical and user update rules.
Topic 4	<ul style="list-style-type: none"> • Segregation of Duties: This section addresses identifying, preventing, and remediating SOD conflicts using rulesets, mitigating controls, and both preventative and detective analysis methods.

Braindump Saviynt SCAIP Free - SCAIP Exams Collection

Passing the Saviynt SCAIP certification exam is necessary for professional development, and employing real Saviynt SCAIP Exam Dumps can assist applicants in reaching their professional goals. These actual SCAIP questions assist students in discovering areas in which they need improvement, boost confidence, and lower anxiety. Candidates will breeze through Saviynt SCAIP Certification examination with flying colors and advance to the next level of their jobs if they prepare with updated Saviynt SCAIP exam questions.

Saviynt Certified Advanced IGA Professional (Level 200) Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which among the following are best practices recommended to configure a technical rule in Saviynt Identity Cloud?

- A. Configure Retrofit for all the rules
- **B. All of the above**
- C. Always have user.statuskey = 1 check wherever applicable
- D. Use Advanced Configurations

Answer: B

Explanation:

In Saviynt EIC, Technical Rules are essential for automating provisioning, deprovisioning, and enforcing access policies. Following best practices ensures reliability, performance, and governance compliance. Hence, Option D (All of the above) is correct. Using Advanced Configurations (Option A) allows administrators to implement complex logic, optimize rule execution, and handle sophisticated use cases such as conditional provisioning or attribute-based decisions. Configuring Retrofit for all rules (Option B) is a recommended practice because it ensures that rules are applied not only to new users but also to existing users. This maintains consistency across the identity repository and prevents access gaps for legacy users. Including a condition like user.statuskey = 1 (Option C) ensures that rules are applied only to active users. This avoids unnecessary processing for inactive or terminated users and prevents unintended provisioning actions. Together, these practices improve rule efficiency, reduce errors, and ensure consistent enforcement of identity governance policies across the organization.

NEW QUESTION # 39

The EIC Administrator observed that all accounts were disabled in Saviynt due to incorrect configuration in the target application. What controls can be implemented in Saviynt to avoid such scenarios?

- A. Use the accEntThresholdValue attribute in the STATUS_THRESHOLD_CONFIG connection parameter
- B. It is not possible to set a limit
- **C. Use the accountThresholdValue attribute in the STATUS_THRESHOLD_CONFIG connection parameter**
- D. Set the limit in the external config file

Answer: C

Explanation:

In Saviynt EIC, mass unintended changes—such as all accounts being disabled due to incorrect target application configuration—can be prevented using threshold-based controls. These controls are defined using the STATUS_THRESHOLD_CONFIG connection parameter, which acts as a safeguard during reconciliation and provisioning processes.

The correct attribute in this scenario is `accountThresholdValue` (Option D). This parameter allows administrators to define a threshold limit for account status changes (such as disablement). If the number or percentage of accounts being disabled exceeds the defined threshold, Saviynt can stop or flag the operation, preventing large-scale unintended impact.

Option A (`accEntThresholdValue`) is used for entitlement-level thresholds, not account status changes.

Option B is incorrect because Saviynt does not provide this safeguard mechanism. Option C is also incorrect since such controls are not managed externally but are part of Saviynt's connector configuration.

By using `accountThresholdValue` within `STATUS_THRESHOLD_CONFIG`, organizations can implement strong governance and prevent bulk account disablement due to misconfigurations or data issues during account import or reconciliation.

NEW QUESTION # 40

An EIC Administrator has a requirement to filter the list of roles based on user location, for example: A user from country A should be able to request only roles for country A. What configuration administrator can use here?

- A. Global Configuration - > Role Request Query
- B. SAV Role
- C. Role Configuration - > User Query
- D. Role cannot be filtered based on user attribute

Answer: A

Explanation:

In Saviynt EIC, the correct configuration for controlling which roles appear in the Access Request screen is the Request Roles Query / Role Request Query under Global Configuration. Saviynt's official documentation for Configuring Role Requests states that this setting is used to specify a query to control the display of roles in Access Request, meaning only roles returned by that query are shown to the requester. That is exactly the use case in this question: filtering the visible role list by a user attribute such as country or location. A query can be written so that users from Country A see only the roles mapped for Country A.

The other options are not correct in this context. SAV Role controls administrative UI permissions in Saviynt, not end-user role catalog filtering. Role Configuration - > User Query is not the standard setting used to drive request-time role visibility for this scenario. Option D is incorrect because Saviynt explicitly supports this use case through the Request Roles Query capability.

NEW QUESTION # 41

What are the different integration options available to integrate Saviynt with ServiceNow?

- A. All of the above
- B. ServiceNow as a Ticketing System (ITSM)
- C. ServiceNow as a Request Form
- D. ServiceNow as a Managed Application

Answer: A

Explanation:

Saviynt EIC provides multiple flexible integration options with ServiceNow to support different business and operational use cases. Therefore, Option D (All of the above) is correct.

ServiceNow as a Managed Application (Option A) allows Saviynt to treat ServiceNow like any other application, enabling account provisioning, deprovisioning, and access governance directly within ServiceNow using REST connectors.

ServiceNow as a Request Form (Option B) enables organizations to leverage ServiceNow's front-end portal for access requests. Users can initiate requests in ServiceNow, which are then processed and fulfilled by Saviynt, ensuring seamless user experience while maintaining governance.

ServiceNow as a Ticketing System (ITSM) (Option C) is another key integration pattern where Saviynt generates tickets (incidents, requests, or tasks) in ServiceNow for approval workflows, provisioning actions, or tracking purposes. This ensures alignment with enterprise ITSM processes.

These multiple integration models provide flexibility, allowing organizations to choose the approach that best fits their operational and governance requirements.

NEW QUESTION # 42

An EIC Administrator wants to retrieve a report of users and their assigned SAV Roles. What are the ways in which it can be achieved? (Multi-Select)

- A. Create analytics with the SQL Query to get the data and select the checkbox 'Send Email As Attachment' in analytics configuration
- B. Create an analytics with the SQL Query to get the data and export as CSV/Excel
- C. Run a SQL Query to retrieve the data in Data Analyzer
- D. Using enhanced query

Answer: A,B,C

NEW QUESTION # 43

.....

The software is designed for use on a Windows computer. This software helps hopefuls improve their performance on subsequent attempts by recording and analyzing Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam results. Like the actual Saviynt SCAIP certification exam, Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) practice exam software has a certain number of questions and allocated time to answer. Any questions or concerns can be directed to the Easy4Engine support team, who are available 24/7. However, the Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam questions software product license must be validated before use.
