New HPE7-A06 Dumps - Exam HPE7-A06 Vce Format

ITCertMagic customizable practice exams (desktop and web-based) help students know and overcome their mistakes. The customizable HP HPE7-A06 practice test means that the users can set the Questions and time according to their needs so that they can feel the real-based exam scenario and learn to handle the pressure. The updated pattern of HP HPE7-A06 Practice Test ensures that customers don't face any real issues while preparing for the test.

HPE Campus Access Switching Expert Written Exam Sample Questions

(Q98-Q103):

You see the output unknown the first time you run the command, but the next time you see the following information displayed.

```
Cable Impedance
Status (Ohms) Description
------------------------------------------------------------------
good 85-115 No cable faults found
open >115 Open circuit detected
intra-short <85 Short-circuit within the same wire pair
inter-short <85 Short-circuit with another wire pair
high-imp >115 Cable impedance was higher than expected
low-imp <85 Cable impedance was lower than expected
unknown --Cable test was inconclusive
```

What are some things you could look at in the switch to troubleshoot the issue? (Choose two.)

- A. diag 1/1/X transceiver all
- B. diag interface 1/1/X transceiver all
- C. diag cable 1/1/X
- D. diag interface transceiver all
- E. diag cable-diagnostic 1/1/X

Answer: C,E

Explanation:
diag cable 1/1/X → Runs a diagnostic test on the cable connected to the port to check for faults.
diag cable-diagnostic 1/1/X → Performs a detailed cable diagnostic to identify impedance, shorts, or open circuits.
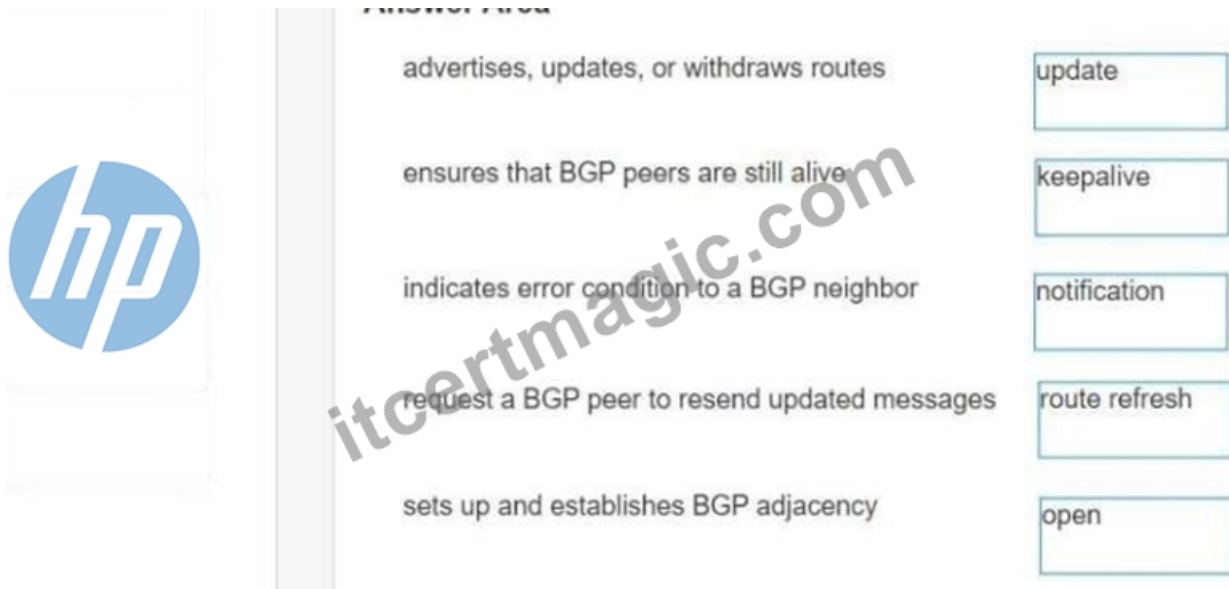

Drag and Drop Question
Match each BGP element to its destination.

Answer:

Explanation:

advertises, updates, or withdraws routes	update
ensures that BGP peers are still alive	keepalive
indicates error condition to a BGP neighbor	notification
request a BGP peer to resend updated messages	route refresh
sets up and establishes BGP adjacency	open

NEW QUESTION # 100

During troubleshooting, an engineer finds excessive ARP requests in the network. Which setting could mitigate this issue?

- A. Adjusting MAC aging timers
- B. Configuring proxy ARP
- C. Increasing ARP cache size
- D. Enabling DHCP Snooping

Answer: D

NEW QUESTION # 101

You are configuring an SSID that is using 802.1X as a security mechanism. What is the reason for using WPA3-Enterprise (CCM-128) when deploying Wi-Fi 6 networks?

- A. WPA3-Enterprise (CCM-128) is also called WPA3-Enterprise 192-bit mode. It is WPA3 only and enforces specific EAP certificate ciphers.
- B. WPA3-Enterprise (CCM-128) is also called WPA3-Enterprise Transition Mode. It will allow WPA2 clients to connect.
- C. WPA3-Enterprise (CCM-128) is also called WPA3-Enterprise Compatibility Mode. It will allow WPA2 clients to connect.
- D. WPA3-Enterprise (CCM-128) is also called WPA3-Enterprise Only Mode. There is no support for WPA2 clients.
Answer: C

Explanation:
WPA3-Enterprise (CCM-128) is also referred to as WPA3-Enterprise Compatibility Mode. It provides WPA3 security while still allowing WPA2 clients to connect, ensuring backward compatibility when deploying Wi-Fi 6 networks. This makes it the correct choice when migrating from WPA2-Enterprise to WPA3-Enterprise in mixed-client environments.

NEW QUESTION # 102

Exhibit.

Edge-1 – AS 65100

10.0.0.2/31   10.0.0.4/31

.3   5

.2   4

10.0.0.0/31
.0   .1

AGG SW1
AS65200

AGG SW2
AS65200

VSX 1

Default Route

- A.
```
router bgp 65100
  10.0.0.2 remote-as 65200
  10.0.0.4 remote-as 65200
    address-family ipv4 unicast
    neighbor 10.0.0.2 route-reflector-client
    neighbor 10.0.0.4 route-reflector-client
```

- B.
```
router bgp 65100
  10.0.0.2 remote-as 65200
  10.0.0.4 remote-as 65200
    address-family ipv4 unicast
    neighbor 10.0.0.2 update-source loopback 0
    neighbor 10.0.0.4 update-source loopback 0
```

- C.
```
router bgp 65100
  10.0.0.2 remote-as 65200
  10.0.0.4 remote-as 65200
    address-family ipv4 unicast
    neighbor 10.0.0.2 activate
    neighbor 10.0.0.4 activate
```

- D.
```
router bgp 65100
  10.0.0.2 remote-as 65200
  10.0.0.4 remote-as 65200
    address-family ipv4 unicast
    neighbor 10.0.0.2 default-originate
    neighbor 10.0.0.4 default-originate
```

Answer: D

Explanation:
The question involves configuring an OSPF virtual link to extend area 0 across a non-backbone area, based on an exhibit (not provided) and four configuration options (A to D). Since the exhibit is unavailable, I will assume a typical scenario where a virtual link is needed to connect two area 0 segments through a transit area (e.g., area 1).
* Analysis of Options (Assumed Context):A virtual link is configured using the area <transit-area> virtual-link <router-id> command in the OSPF process. The correct option likely includes:
* Option A:Incorrect syntax or incorrect router ID/area for the virtual link.
* Option B:Incorrect configuration, possibly missing the virtual link or using wrong parameters.
* Option C:Correct. Likely includes the proper command, e.g., area 1 virtual-link 2.2.2.2, where area 1 is the transit area and 2.2.2.2 is the router ID of the remote ABR.

* Option D:Incorrect, possibly configuring an unnecessary or incorrect virtual link.
* Why Option C is Correct:OSPF requires all areas to connect to the backbone area (area 0). If two area
0 segments are separated by a non-backbone area (e.g., area 1), a virtual link is configured between the Area Border Routers (ABRs) to logically extend area 0 through the transit area. The command area
<transit-area> virtual-link <remote-router-id> is used, specifying the transit area and the router ID of the remote ABR. Option C is assumed to provide the correct syntax and parameters based on standard OSPF virtual link configurations, ensuring area 0 connectivity and proper route advertisement.
* Relevance to Certification Objectives:
* Routing (16%):Designing and troubleshooting OSPF topologies, including virtual links.
* Troubleshooting (10%):Resolving OSPF area connectivity issues.
