New EXIN CDFOM Test Testking | New CDFOM Exam Test

It is known to us that the error correction is very important for these people who are preparing for the CDFOM exam in the review

stage. If you want to correct your mistakes when you are preparing for the CDFOM exam, the study materials from our company will be the best choice for you. Because our CDFOM reference materials can help you correct your mistakes and keep after you to avoid the mistakes time and time again. We believe that if you buy the CDFOM exam prep from our company, you will pass your exam in a relaxed state.

EXIN Certified Data Center Facilities Operations Manager Sample Questions (Q13-Q18):

NEW QUESTION # 13

Of the below, which is a non-renewable energy source?

- A. Wind energy
- B. Tidal power
- C. Natural Gas
- D. Hydropower

Answer: C

Explanation:

Non-renewable energy sources are those that:

- * Cannot be replenished within a human lifespan
- * Exist in finite quantities
- * Are extracted from fossil fuels or geological deposits

Natural gas is a fossil fuel and therefore non-renewable.

Why the other options are incorrect:

- * Wind energy- renewable
- * Tidal power- renewable
- * Hydropower- renewable

Thus, C is correct.

EPI DCFOM-Aligned Reference Concepts (Paraphrased)

- * Sustainability planning considers renewable vs. non-renewable sources.
- * Natural gas is listed as a fossil fuel, hence non-renewable.

NEW QUESTION # 14

In and around the data center, who is responsible for safety?

- A. All staff
- B. The facilities manager
- C. The managing director
- D. The safety manager

Answer: A

Explanation:

EPI's safety and statutory requirements training emphasizes that safety is a shared responsibility across the entire data center organization. While roles such as the safety manager and facilities manager provide leadership, guidance, oversight, audits, and enforcement of safety procedures, they alone cannot ensure a safe workplace. Every individual working in or around the data center—whether employees, contractors, vendors, or visitors—has the responsibility to follow safety procedures, report hazards, use required protective equipment, and stop unsafe activities.

This collective responsibility approach ensures that risks are recognized early, unsafe conditions are not ignored, and safety culture is embedded throughout daily operations. The safety manager establishes policies, training, audits, and compliance frameworks; the facilities manager ensures operational processes support safety; the managing director endorses governance and resources. However, frontline workers are the most exposed to hazards, making their behavior critical.

Option C is correct because EPI emphasizes that safety cannot be delegated solely to one role; it must be embraced by all staff, ensuring a consistent, safe working environment. Data centers operate high-voltage systems, heavy equipment, and complex mechanical infrastructure, making shared vigilance essential for preventing incidents and ensuring regulatory compliance.

NEW QUESTION # 15

What is defined by the Recovery Time Objective (RTO)?

- A. The prioritized timeframes for resuming disrupted activities at a specified minimum acceptable capacity
- B. The time within which the impacts of not resuming activities would become unacceptable to the organization
- C. The maximum age of the data to be restored in case of a disaster
- D. The minimum level of service required to be operational again

Answer: A

Explanation:

In organizational resilience and business continuity planning, the Recovery Time Objective (RTO) is a core metric used to determine the acceptable downtime for each business function.

EPI defines RTO as the:

"Targeted duration within which disrupted services or processes must be restored to a minimum acceptable operational level after a disaster." Key points:

- * Timeframe for Recovery The RTO identifies how quickly a facility, system, or service must be restored before the outage causes unacceptable consequences.
- * Minimum Service Capacity The RTO refers to restoring operations at a minimum acceptable level, not full normal operations.
- * Business Impact Analysis (BIA) Output RTO is derived during BIA where criticality and dependencies of business processes are assessed and prioritized.
- * Prioritization of Resources RTO informs disaster recovery planning, resource allocation, and restoration sequencing.

Therefore, the correct definition matches:

D - "The prioritized timeframes for resuming disrupted activities at a specified minimum acceptable capacity." Why the other options are incorrect:

- * A describes the MTPD (Maximum Tolerable Period of Disruption).
- * B describes elements of the Minimum Business Continuity Objective (MBCO).
- * C describes the Recovery Point Objective (RPO).

EPI DCFOM-Aligned Reference Concepts (Paraphrased, Not Verbatim)

- * RTO defines the permitted downtime for a service.
- * RTO is linked to minimum acceptable capability after recovery.
- * RTO is determined through BIA.

NEW QUESTION # 16

The data center organization has all its services prepared and wishes to announce the outcome to its customers so that they can place their order.

What document - or information - will it share?

- A. Service catalog
- B. Service portfolio
- C. Needs analysis report
- D. Business continuity plan

Answer: A

Explanation:

EPI distinguishes between:

- * Service Portfolio # internal document used for service design, planning, assessment
- * Service Catalog # customer-facing document listing available services

The service catalog provides customers with:

- * Service descriptions
- * Service options
- * Ordering information
- * Terms and conditions
- * SLA details
- * Pricing models (where applicable)

It is specifically designed to allow customers to select and order services.

Why other options are incorrect:

- * A: Service portfolio is internal only.
- * B: BCP is unrelated to service ordering.
- * C: Needs analysis is internal planning documentation.

Thus, Dis correct.

EPI DCFOM-Aligned Reference Concepts (Paraphrased)

- * The service catalog contains all customer-orderable services.
- * It is the primary communication tool for customer consumption.

NEW QUESTION # 17

The data center service provider has decided that maintenance of the data center facilities infrastructure will be outsourced. Is it still involved in the risk management process of data center maintenance?

- A. It depends on the knowledge and experience of the maintenance service provider
- **B. Yes, since although risk can be shared, it cannot be transferred**
- C. No, since the data center service provider is not actively involved in the actual maintenance of the data center.
- D. No, the selected maintenance service provider is responsible

Answer: B

Explanation:

EPI's governance and risk management principles clearly state:

- * When a data center outsources maintenance, operational work can be outsourced, but risk cannot be transferred.
- * Risk may be shared, mitigated, or reduced through contractual arrangements, but ownership remains with the data center service provider.
- * The data center operator is still responsible for ensuring compliance, operational continuity, and safety—even if another party performs the maintenance tasks.

Therefore:

- * The service provider must remain involved in risk evaluation, risk treatment, and ongoing monitoring.
- * Oversight responsibilities cannot be delegated.

Options C and D are incorrect because outsourcing the activity does not outsource risk accountability.

Option B is irrelevant because risk responsibility does not depend on provider expertise.

Thus, A is correct.

EPI DCFOM-Aligned Reference Concepts (Paraphrased)

- * Risk ownership remains with the organization even when maintenance is outsourced.
- * Outsourcing shares risk but does not transfer it.
- * The data center must maintain involvement in the risk management process.

NEW QUESTION # 18

.....

Here in this Desktop practice test software, the Certified Data Center Facilities Operations Manager (CDFOM) practice questions given are very relevant to the actual Certified Data Center Facilities Operations Manager (CDFOM) exam. It is compatible with Windows computers. PassTestking provides its valued customers with customizable Certified Data Center Facilities Operations Manager (CDFOM) practice exam sessions. The Certified Data Center Facilities Operations Manager (CDFOM) practice test software also keeps track of the previous EXIN CDFOM practice exam attempts.
