

# Mule-Dev-202 Exam Study Solutions - Exams Mule-Dev-202 Torrent

## BIO 202 Exam 1 study guide

Physical characteristics of blood: - Answer -Transport, Regulation, Protection

Transport functions includes: - Answer -Delivering O<sub>2</sub> and nutrients to body cells  
Transporting metabolic wastes to lungs and kidneys for elimination  
Transporting hormones from endocrine organs to target organs

Regulation functions include: - Answer -- Maintaining body temperature by absorbing and distributing heat  
- Maintaining normal pH using buffers; alkaline reserve of bicarbonate ions  
Maintaining adequate fluid volume in circulatory system

Protection functions include: - Answer -Preventing blood loss  
Plasma proteins and platelets in blood initiate clot formation

Preventing infection: - Answer -Agents of immunity are carried in blood  
- Antibodies  
- Complement proteins  
- White blood cells

Blood is the only fluid \_\_\_\_\_ in body - Answer -tissue

Matrix is nonliving fluid called: - Answer -plasma

Cells are living blood cells called - Answer -formed elements

Erythrocytes - Answer -(red blood cells, or RBCs)

Leukocytes - Answer -(white blood cells, or WBCs)

Platelets - Answer -

Blood plasma is straw-colored sticky fluid - Answer -and is About 90% water

Which blood cell is a complete blood cell - Answer -WBC

Which blood cells have no nuclei or other organelles - Answer -RBC

The main key to passing the Mule-Dev-202 exam is to use your time affectionately and grasp every topic so you can attempt the maximum number of questions in the actual Mule-Dev-202 Exam. By studying the questions mentioned in the prep material, the candidates have control over the exam anxiety in no time.

Everyone has the right to pursue happiness and wealth. You can rely on the Mule-Dev-202 certificate to support yourself. If you do not own one or two kinds of skills, it is difficult for you to make ends meet in the modern society. After all, you can rely on no one but yourself. At present, our Mule-Dev-202 Study Materials can give you a ray of hope. Even you have no basic knowledge about the Mule-Dev-202 study materials. You still can pass the Mule-Dev-202 with the help of our Mule-Dev-202 learning guide.

## Mule-Dev-202 Quiz Torrent - Mule-Dev-202 Pass-King Torrent & Mule-Dev-202 Practice Materials

We're committed to ensuring you have access to the best possible Mule-Dev-202 questions. We offer Mule-Dev-202 dumps in PDF, web-based practice tests, and desktop practice test software. We provide these Mule-Dev-202 questions in all three formats since each has useful features of its own. If you prepare with Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) actual dumps, you will be fully prepared to pass the test on your first attempt.

## Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q18-Q23):

## NEW QUESTION # 18

Northern Trail Outfitters evaluates multiple standards for the exit criteria of a stage in their Flow Orchestration. Based on their criteria, they want the flow to go down one of three paths.

How should this be built in Flow Orchestration to meet this requirement?

- A. Create two evaluation flows, and execute the second evaluation flow if the first evaluation flow returns false.
- **B. Have the evaluation flow return a number variable, and use a decision element to determine which path to execute.**
- C. Use the evaluation flow to determine the exit criteria for the current stage. Then, use a separate evaluation flow to determine the entry criteria for each of the three paths.
- D. Evaluate the criteria for the first two paths in an evaluation flow. Then, use the default path functionality of the decision element for the third path.

**Answer: B**

Explanation:

To implement branching logic based on multiple criteria in Flow Orchestration, you can use the following approach:

Evaluation Flow Returns a Number Variable:

Create an evaluation flow that assesses the exit criteria for the current stage and returns a number variable indicating which path to take (e.g., 1, 2, or 3).

Decision Element:

Use a decision element in Flow Orchestration to evaluate the number variable returned by the evaluation flow.

Based on the value of the variable, the decision element will determine which path to execute next.

This approach allows for clear and maintainable branching logic, ensuring that the flow can proceed down one of three paths based on the defined criteria.

## NEW QUESTION # 19

The customer support team at Northern Trail Outfitters manages and maintains customer service cases using Service Cloud. The team collaborates with other stakeholders such as the sales, product, and technical support teams to resolve cases using Slack.

The team needs to use a MuleSoft Composer flow to automatically trigger when a case is created or modified in Service Cloud with notifications in Slack. Based on these specific case requirements, the team routes the cases to the sales, product, or the technical support team.

What flow component must the customer support team use to route the cases?

- A. If/Else
- **B. Switch/Case**
- C. For Each
- D. Swimlane

**Answer: B**

Explanation:

To route cases based on specific criteria to different teams (sales, product, or technical support) using MuleSoft Composer, the Switch/Case component is the most appropriate choice:

Create a MuleSoft Composer Flow:

Start by creating a flow in MuleSoft Composer that triggers when a case is created or modified in Service Cloud.

Use the Switch/Case Component:

Add a Switch/Case component to the flow. This component allows you to define multiple conditions and route the flow based on these conditions.

Define the different case routing criteria (e.g., case type, priority) within the Switch/Case component. For each case, specify the condition that determines which team the case should be routed to.

Configure Notifications in Slack:

For each case defined in the Switch/Case component, configure the corresponding actions to send notifications to the appropriate Slack channels.

The Switch/Case component enables complex conditional logic, making it ideal for routing cases to different teams based on predefined criteria.

## NEW QUESTION # 20

An AnyAirlines employee determines that an RPA process is a strong candidate for automation. When approving the process, the employee needs to specify a group of potential users to manage the RPA process throughout its lifecycle.

According to best practices, which group should the employee choose?

- A. Multiple project managers
- B. Scrum team
- C. Center of Excellence
- D. Center for Enablement

### Answer: C

Explanation:

When approving an RPA process and specifying a group of potential users to manage it throughout its lifecycle, the best practice is to choose the Center of Excellence (CoE):

Center of Excellence (CoE):

The CoE is a team of experts who are responsible for overseeing the implementation, governance, and management of RPA processes within the organization.

They ensure that best practices are followed, provide guidance and support to project teams, and manage the overall RPA strategy and roadmap.

Lifecycle Management:

The CoE is well-equipped to manage the RPA process from initial development through deployment and ongoing maintenance. They have the expertise to handle any issues that arise and ensure the process remains efficient and effective.

Best Practices:

By involving the CoE, the organization ensures that the RPA process adheres to established best practices, maintains high quality, and delivers the expected benefits.

## NEW QUESTION # 21

An employee at AnyAirlines uses RPA Recorder to capture actions performed when carrying out a business process automation. How does this help expedite RPA process development?

- A. BPMN is autogenerated with complete test plans and run configurations that can be executed in the test and production phases.
- B. BPMN is autogenerated, which includes documentation in the form of images and a complete recording of keyboard actions and wait times.
- C. BPMN is autogenerated with documentation and workflows containing the recorded actions that are automatically created during the build phase.
- D. BPMN is autogenerated, including documentation in the form of images and a fully functional RPA process with workflows and conditional branching.

### Answer: B

Explanation:

Using RPA Recorder to capture actions performed during a business process automation helps expedite RPA process development in the following way:

Autogenerating BPMN:

The RPA Recorder captures the business process as it is performed and autogenerates a Business Process Model and Notation (BPMN) diagram. This diagram includes a visual representation of the process, making it easier to understand and modify.

Detailed Documentation:

Along with the BPMN, the recorder generates detailed documentation that includes images of the steps performed, as well as a complete recording of keyboard actions and wait times. This provides a comprehensive view of the process, which can be reviewed and refined.

Expediting Development:

By automating the creation of BPMN and detailed documentation, the RPA Recorder significantly reduces the time required to document and design the RPA process manually. This allows developers to focus on refining and optimizing the process rather than starting from scratch.

## NEW QUESTION # 22

Northern Trail Outfitters set up a MuleSoft Composer integration between Salesforce and NetSuite that updates the Order object in Salesforce with data from NetSuite.

When an order in Salesforce is updated as complete, the Last Order Date custom field on the related account should automatically update with the date the order was marked complete.

What is the best practice to achieve this outcome?

- A. Create a MuleSoft RPA bot that updates the related account when the order is marked complete.
- B. Update the MuleSoft Composer integration to also update the related account when the order is marked complete.
- **C. Create a record-triggered flow on the Order object that updates the related account when the order is marked complete.**
- D. Replace the MuleSoft Composer integration with a three-tier API integration between Salesforce and NetSuite using Anypoint Platform

**Answer: C**

Explanation:

To update the Last Order Date custom field on the related account when an order is marked complete in Salesforce, the best practice is to use a record-triggered flow:

Create a Record-Triggered Flow:

Use Salesforce Flow to create a record-triggered flow on the Order object.

Set the flow to trigger when a record is updated (specifically, when the order status is updated to complete).

Update the Related Account:

In the flow, use a Get Records element to fetch the related Account record.

Use an Update Records element to update the Last Order Date custom field on the related Account with the date the order was marked complete.

This approach ensures that the data remains within Salesforce and is updated immediately as part of the same transaction, providing a robust and efficient solution.
