CompTIA Linux+ Certification Exam Sample Questions (Q58-Q63):

NEW QUESTION # 58
A systems administrator receives reports about connection issues to a secure web server. Given the following firewall and web server outputs:

Which of the following commands best resolves this issue?

- A. ufw allow 80/tcp
- B. ufw disable
- C. ufw allow 4096/tcp
- D. ufw delete deny https/tcp

Answer: D

Explanation:
The firewall output shows that port 443/tcp (HTTPS) is explicitly denied, even though the web server is correctly listening on it.
Removing the deny rule for HTTPS (ufw delete deny https/tcp) resolves the issue while still keeping the firewall active and secure.

NEW QUESTION # 59
A systems administrator wants to prevent the current contents of a file from being overwritten and wants to allow new additions at the end of the file. Which of the following commands should the administrator use?

- A. chmod +t file
- B. chattr +a file
- C. setenforce file
- D. setfacl -m m::t file

Answer: B

Explanation:
The chattr +a command sets the append-only attribute on a file. This prevents overwriting or deletion of existing contents, while still allowing new data to be appended to the end of the file.

NEW QUESTION # 60
A newly hired Linux administrator needs to grant access to the Linux servers by generating a password-protected RSA key of 4096 bytes. Which of the following commands will accomplish this task?

- A. ssh-keygen -k rsa -l 4096 -p
- B. ssh-keygen -t dsa -B 4096
- C. ssh-keygen -RPb 4096
- D. ssh-keygen -t rsa -b 4096

Answer: D

Explanation:
The ssh-keygencommand is used to generate SSH key pairs. To generate an RSA key with a length of 4096 bits, the correct syntax is:
1.-t rsa: Specifies the type of key to generate, which is RSA.
2.-b 4096: Specifies the number of bits for the key, in this case 4096.
By running this command, the user will be prompted to enter a passphrase to password-protect the key, which satisfies the requirement for generating a password-protected RSA key of 4096 bits.

NEW QUESTION # 61

A Linux server is not starting up because files in the /boot/partition are corrupt. After the initial GRUB screen, the following message is displayed:
Probing EDD (edd=off to disable)... ok
uncompression error
--system halted
Which of the following steps should the Linux administrator take to recover the system without destroying the existing installation? (Choose two.)

- A. Reinstall the OS.
- B. Replace the hard drive.
- C. Start up in single-user mode.
- D. Reinstall the kernel packages.
- E. Start up the system using rescue boot media.
- F. Increase the amount of swap memory.

Answer: D,E

Explanation:
Using rescue boot media lets you boot the machine, mount the existing partitions, and access the corrupted /boot files without reinstalling the OS.
Reinstalling the kernel packages restores the missing or corrupt files in /boot (e.g., vmlinuz and initramfs), allowing GRUB to load and uncompress the kernel properly.

NEW QUESTION # 62

A user sends a request to access a virtual server via SSH. Which of the following commands is used to open the SSH standard port?

- A. firewalld-cmd --remove-service=ssh --permanent
- B. firewalld-cmd --permanent --add-port=22/tcp
- C. iptables-save | grep dport-22/tcp
- D. iptables -A INPUT -p tcp --dport sshd -j ACCEPT

Answer: B

Explanation:
The firewalld-cmd --permanent --add-port=22/tcpcommand (commonly
firewall-cmd) opens TCP port 22 in the permanent firewalld ruleset so that SSH traffic is allowed. After running it, you'd issue firewall-cmd --reloadto apply the change.
