## 最新的 CCP-V 1Y0-312 免費考試真題 (Q119-Q124):

### 問題 #119

Which two statements are valid when integrating Workspace Environment Management (WEM) and Active Directory (AD)? (Choose two.)

- A. WEM requires read/write access to the AD infrastructure.

- B. AD Administrative access is required to configure the WEM Agent.
- C. WEM policies should mirror active AD Group Policy Objects (GPOs).
- D. WEM contacts AD on port 389 to retrieve user details.

答案： A,D

解題說明：

WEM communicates with Active Directory over LDAP on port 389 to retrieve user and group information for policy processing and assignments.

WEM requires directory access to integrate with AD objects and group structures, which involves permissions within the AD infrastructure for proper operation and policy integration.

#### 問題 #120

Scenario: A Citrix Engineer is maintaining a Citrix Virtual Apps and Desktops environment. The engineer has deployed Workspace Environment Management (WEM) within the infrastructure. The engineer has recently noticed that the two most commonly used applications are consuming excessive disk contention and causing bottlenecks on the servers.

Which WEM System Optimization does the engineer need to use to address this issue?

- A. Session-Based Computing/Hosted Virtual Desktop (SBC/HVD) Tuning
- B. Memory Management
- C. I/O Management
- D. Process Management

答案： A

解題說明：

SBC/HVD (Session-Based Computing/Hosted Virtual Desktop) tuning allows you to optimize the performance of sessions running on Citrix Virtual Apps and Desktops. While designed to improve performance, some of the options might result in slight degradation of the user experience.

#### 問題 #121

For which three reasons are connectors needed to create layers? (Choose three.)

- A. To deploy a packaging disk
- B. To import a prepared application layer
- C. To publish a layered image
- D. To import a prepared OS image
- E. To export an elastic application layer

答案： A,C,D

解題說明：

The appliance uses connectors for accessing locations in your hypervisor environment or provisioning service.

You configure each connector with the credentials for a specific location in your virtual environment. Each of your connector configurations includes the credentials required for the appliance to do one of the following:

Import the OS for the OS layer.

Package layers during layer creation.

Publish layered images to a specific location.

#### 問題 #122

Which two considerations should a Citrix Engineer be aware of when creating application layers with Citrix App Layering? (Choose two.)

- A. Applications should be installed onto the packaging machine from an ISO or a fileshare location.
- B. Windows and Application updates should be turned off.
- C. Cross-talk between application layers is NOT supported after they are published in Citrix App Layering.
- D. There is no support for applications that require prerequisites in order to operate.

- E. Install the appropriate hypervisor tools on the packaging machine at the same time the applications are installed.

答案: A,B

解題說明:

Explanation

<https://support.citrix.com/article/CTX225371>

- Install apps from a share or an ISO versus downloading them to the desktop to keep layer size to a minimum.
- Turn off automatic updates for applications. If automatic updates are left on, the updates will be put into the personalization layer.
- If this happens, you can use the "reinstall" feature to take back control of the application, and clearing the personalization layer of these conflicts/updates.
- When installing an application that requires being part of a domain, it is ok to add the installation machine to the domain.
- After installing the application, remove the installation machine from the domain.
- Clean up the left over computer object in active directory
- Installation machines can be added to View pools. Remember to remove them before finalizing the layer. This will prevent View certificate information from being saved in the layer.

### 問題 #123

Which two statements are true when Citrix App Layering is used with Citrix Virtual Apps and Desktops?

(Choose two.)

- A. Citrix App Layering simplifies application deployments and updates.
- B. Citrix Machine Creation Services (MCS) catalogs can be updated within the Citrix App Layering Management console.
- C. Citrix App Layering offers all the same functionality as Citrix Provisioning (PVS).
- D. Citrix App Layering reduces management of multiple golden images.

答案: B,D
