Reliable RedHat EX280 Dumps Ebook, Reliable EX280 Mock Test

If you study with our EX280 exam questions, you are bound to get the certification. The scientific design of EX280 preparation quiz allows you to pass exams faster, and the high passing rate will also make you more at ease. In this age of anxiety, being able to meet such a product is really fortunate for you. Choosing EX280 training engine will make you feel even more powerful. You can improve your ability more easily. When others work hard, you are already ahead!

The EX280 exam is intended for IT professionals who have experience working with OpenShift clusters and want to validate their skills and knowledge in this area. Red Hat Certified Specialist in OpenShift Administration exam certification is suitable for system administrators, developers, and DevOps engineers who work with OpenShift clusters and want to advance their careers in this field. By passing the EX280 Exam, candidates can differentiate themselves from other IT professionals and demonstrate their expertise in OpenShift administration.

RedHat Red Hat Certified Specialist in OpenShift Administration exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

Create Service Account in QED

Task information Details:

Switch to project qed .

Create service account project1-sa .

Grant the anyuid SCC to that service account.

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

* Switch to the project:

```
oc project qed
```

* Create the service account:

```
oc create serviceaccount project1-sa -n qed
```

* Grant the SCC:

```
oc adm policy add-scc-to-user anyuid -z project1-sa -n qed
```

* Verify:

```
oc get sa project1-sa -n qed
```

```
oc adm policy who-can use scc anyuid
```

Why this matters:

* anyuid allows containers to run with arbitrary user IDs when an application requires it.

* This is a common administrative task in OpenShift for third-party container images.

This task validates service account creation and SCC assignment.

NEW QUESTION # 31

Autoscale of Pods

Task information Details:

Create an HPA for httpd with min=2 , max=9 , and CPU target 60% .

Set resource requests on the httpd deployment so autoscaling can function properly.

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

* Set resource requests on the deployment:

```
oc set resources deployment httpd --requests=cpu=50m,memory=100Mi
```

* Create the HPA:

```
oc autoscale deployment httpd --min=2 --max=9 --cpu-percent=60
```

* Verify:

```
oc get hpa
```

```
oc describe hpa httpd
```

```
oc get deployment httpd -o yaml
```

Why resource requests matter:

* HPA CPU utilization is calculated against requested CPU.

* Without requests, percentage-based autoscaling is incomplete or invalid.

This task focuses on autoscaling prerequisites and policy creation.

NEW QUESTION # 32

Create a PV and PVC

Task information Details:

Create a PersistentVolume named landing-pv with 1Gi , ReadOnlyMany , NFS backend, and Retain reclaim policy.

Create a PersistentVolumeClaim named landing-pvc requesting 1Gi , ReadOnlyMany , and storage class nfs2 .

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

* Create landing-pv.yaml:

```
apiVersion: v1
```

```

kind: PersistentVolume
metadata:
name: landing-pv
spec:
capacity:
storage: 1Gi
accessModes:
- ReadOnlyMany
nfs:
path: /open001
server: 192.168.2.2
persistentVolumeReclaimPolicy: Retain
* Apply it:
oc apply -f landing-pv.yaml
* Create landing-pvc.yaml:
apiVersion: v1
kind: PersistentVolumeClaim
metadata:
name: landing-pvc
spec:
accessModes:
- ReadOnlyMany
resources:
requests:
storage: 1Gi
storageClassName: nfs2
* Apply it:
oc apply -f landing-pvc.yaml
* Verify:
oc get pv
oc get pvc
oc describe pv landing-pv
oc describe pvc landing-pvc

```

This task validates persistent storage provisioning and claim binding concepts.

NEW QUESTION # 33

Deploy an application

Deploy the application called oranges in the apples project so that the following conditions are true:

The application uses the ex280sa service account

No additional configuration components have been added or removed The application produces output

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

```
$ oc project mercury
```

```
$ oc get pods
```

```
$ oc get all | grep deploy
```

```
$ oc describe deployment.apps/atlas | grep -L memory
```

```
$ oc set resources deployment.apps/atlas --resources=memory=80Mi
```

NEW QUESTION # 34

Create Resource Quota for Project Rocky

Task information Details:

Use project rocky and create a quota named rocky-quota with limits for CPU, memory, pods, services, replication controllers, and secrets.

Answer:

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

* Ensure the project exists and switch to it:

```
oc new-project rocky
```

```
oc project rocky
```

* Create the quota:

```
oc create quota rocky-quota \
```

```
--hard=limits.cpu=2,limits.memory=1Gi,pods=3,services=6,replicationcontrollers=6,secrets=6
```

* Verify:

```
oc get resourcequota -n rocky
```

```
oc describe quota rocky-quota -n rocky
```

Notes:

* The lab text uses `cpu=2,memory=1G` and `secret=6`; in real OpenShift usage, the more reliable forms are `limits.cpu`, `limits.memory`, and `secrets`.

* If the exam specifically expects the exact resource names shown in the lab environment, use what the cluster accepts.

This task checks quota enforcement and namespace resource governance.
